# **WITHOUT WORK, TOOLS ARE JUST THINGS**

**WE KNOW THAT DRILLS WHICH ONLY DRILL HOLES AND MILLING CUTTERS WHICH ONLY MILL GROOVES ARE THE STANDARD. ONLY WHEN THE HOLES AND GROOVES BECOME A PROFESSIONAL PRODUCT DOES THE TOOL HAVE PURPOSE.**

**THAT'S WHY WE OFFER NOT ONLY PROFESSIONAL TOOLS, BUT ALSO SERVICES THAT ALLOW YOU TO PRODUCE FASTER, BETTER AND MORE EFFICIENTLY.**

**BECAUSE SARTORIUS IS THERE FOR YOU. FOR THOSE WHO DO, WHO BUILD, WHO CREATE. NOT FOR WELL-INTENTIONED DIY PROJECTS, BUT FOR PROFESSIONAL WORK AT A PROFESSIONAL STANDARD. FOR THOSE WHO DON'T TINKER, BUT PRODUCE. FOR THOSE WHO NEED ONE THING ABOVE ALL:**

**POWER TO PRODUCE**

# ADVICE FOR THAT SOMETHING EXTRA

You don't need to know everything. You just need to know someone who does. Like SARTORIUS. We've assembled a network of experts to help you find the right tool and solution for your manufacturing needs.

## **KNOW WHAT YOU NEED: YOUR CUSTOMER ADVISOR**

When it comes to finding just the right product from the seemingly endless range of professional tools, you don't have to go it alone. Your customer adviser will support you directly on site. Our customer advisers are professionals who know what matters to you. So we offer you nothing but the solution that suits you best.

## **KNOW WHAT WORKS: OUR CUSTOMER MANAGEMENT**

Whether order acceptance, delivery inquiries or telephone advice – our specialists in customer management are happy to assist you with any issues. They will answer your questions competently and forward your queries directly to the right places.

## **KNOW HOW IT WORKS: OUR APPLICATIONS ENGINEERS**

We know that professionals understand professionals. That's why our applications engineers are always on hand to help you find the right solution. Particularly when your work becomes more specialised and standard simply won't cut it any more.

# 6

## RESONS FOR CHOOSING **SARAGO! GALAXY**

- ① Continuous process support
- ① Standardised software interface
- ① High compatibility with external systems
- ① Over 30 CAM interfaces
- ① Central database
- ① Modular system

**SARAGO! GALAXY**

# SARAGO! GALAXY

YOUR TOOLS

# ALWAYS AVAILABLE

Do you want to conserve resources? Do you want to avoid machine downtimes caused by missing tools? Do you want to ensure process reliability by networking your production processes? Do you want to be prepared for Industry 4.0?

Then purchase SARAGO! GALAXY for your production hall! SARAGO! GALAXY is the clever tool dispensing system from SARATOOLS.com that allows you to have your very own 4.0 system right in your production hall. Because perfect production requires a perfect system.

**SOFTWARE**

The GALAXY SOFTWARE PACKAGE offers you everything you need for your production process. Modular in design, expandable, and easy to implement. Software you can build on. We will be happy to offer you further software solutions on request.

At SARATOOLS.com, expansion also means that our packages are always up-to-date. We expand our functionalities, reacting to new requirements with new functions. New standards are integrated into our updates. This ensures that you always have access to the latest software version.

THIS IS POWER TO PRODUCE.

Data plays an essential role in smart manufacturing. It allows you to map the entire production process in advance. This ensures the actual production process later on down the line. This is the basis of reliable modern production. THIS IS POWER TO PRODUCE.

MAKE THE BEST  
EVEN BETTER: RELIABLE  
**PRODUCTS**  
FOR  
**PROFESSIONALS**

**OUR FLYERS:  
QUICK AND STREAMLINED. EVEN IN THE PRICING**

Although the catalogue is only published once a year, the international SARTORIUS TAKEOFF! flyer is sent out on a regular basis. And while these flyers are thin, they include everything you need to know - including plenty of attractive offers for your production.

Didn't receive a TAKEOFF! flyer? Then give us a call.

# PERFECT FOR PROFESSIONALS: OUR POWER BRANDS

**BECAUSE WE ARE ALWAYS WORKING CLOSELY WITH THE PROS, WE KNOW WHAT PROFESSIONALS WANT. WHAT COULD BE BETTER THAN USING OUR WEALTH OF KNOWLEDGE TO PROVIDE YOU WITH THE PERFECT TOOL? PRECISELY. THAT'S WHY WE CREATED ATORN AND SARA – THE POWER BRANDS FROM SARTORIUS.**

## **ATORN®**

### **PERFORMANCE DEMANDS QUALITY.**

We know that professionals don't just want good tools – they want the best. That's why we created ATORN. All ATORN tools are designed based on our wealth of manufacturing expertise, so you can produce better. The ATORN brand uses only high-quality materials and first-class processing techniques – and all this at an unbeatable price-performance ratio.

ATORN offers strong products in the following areas:

- Machining
- Clamping
- Measuring and testing
- Grinding
- Hand tools
- Workshop equipment

## **SARA®**

### **SMALL NAME, BIG POWER**

Our power brand SARA offers you over 10,000 strong products for your production. Whether clamp mountings, boring bars, clamping jaws, multifunction tools or milling cutters of any type – professionals will always be satisfied with SARA.

- High quality for high standards
- Functional and reliable to use
- Outstanding price-performance ratio
- High availability
- Extensive range

# ACHIEVING MORE TOGETHER: OUR PARTNERS

## OUR PRODUCT PARTNERS

Professional products for almost any application. It's no coincidence – and it's all down to our many partners. Partners with high-quality, innovative products. Partners such as:

## WE ARE GLOBAL. BUT WE'RE LOCAL TOO. OUR DISTRIBUTION PARTNERS:

POWER TO PRODUCE is for everyone. We've built a large network of distributors across Europe – so you can always rely on SARTORIUS. Wherever you are. Wherever you work.

Bosnia and Herzegovina	Austria
Bulgaria	Poland
Denmark	Portugal
Estonia	Romania
Finland	Sweden
Greece	Switzerland
Italy	Serbia
Iceland	Slovakia
Kazakhstan	Spain
Croatia	Branch in Czech Republic
Latvia	Hungary
Lithuania	Ukraine
Macedonia	Uzbekistan
Netherlands	
Norway	

# FOR THOSE WHO ALWAYS GIVE IT THEIR ALL: OUR SERVICE

## **CALIBRATION SERVICE**

Real professionals don't work with "rough" estimates: they have to be able to rely on the precision of their measuring equipment. We therefore offer calibration of your measuring equipment to DIN EN ISO/IEC 17025:2018. We also provide free collection, fast processing, accurate logging and express delivery on request.

## **RESHARPENING AND COATING SERVICE**

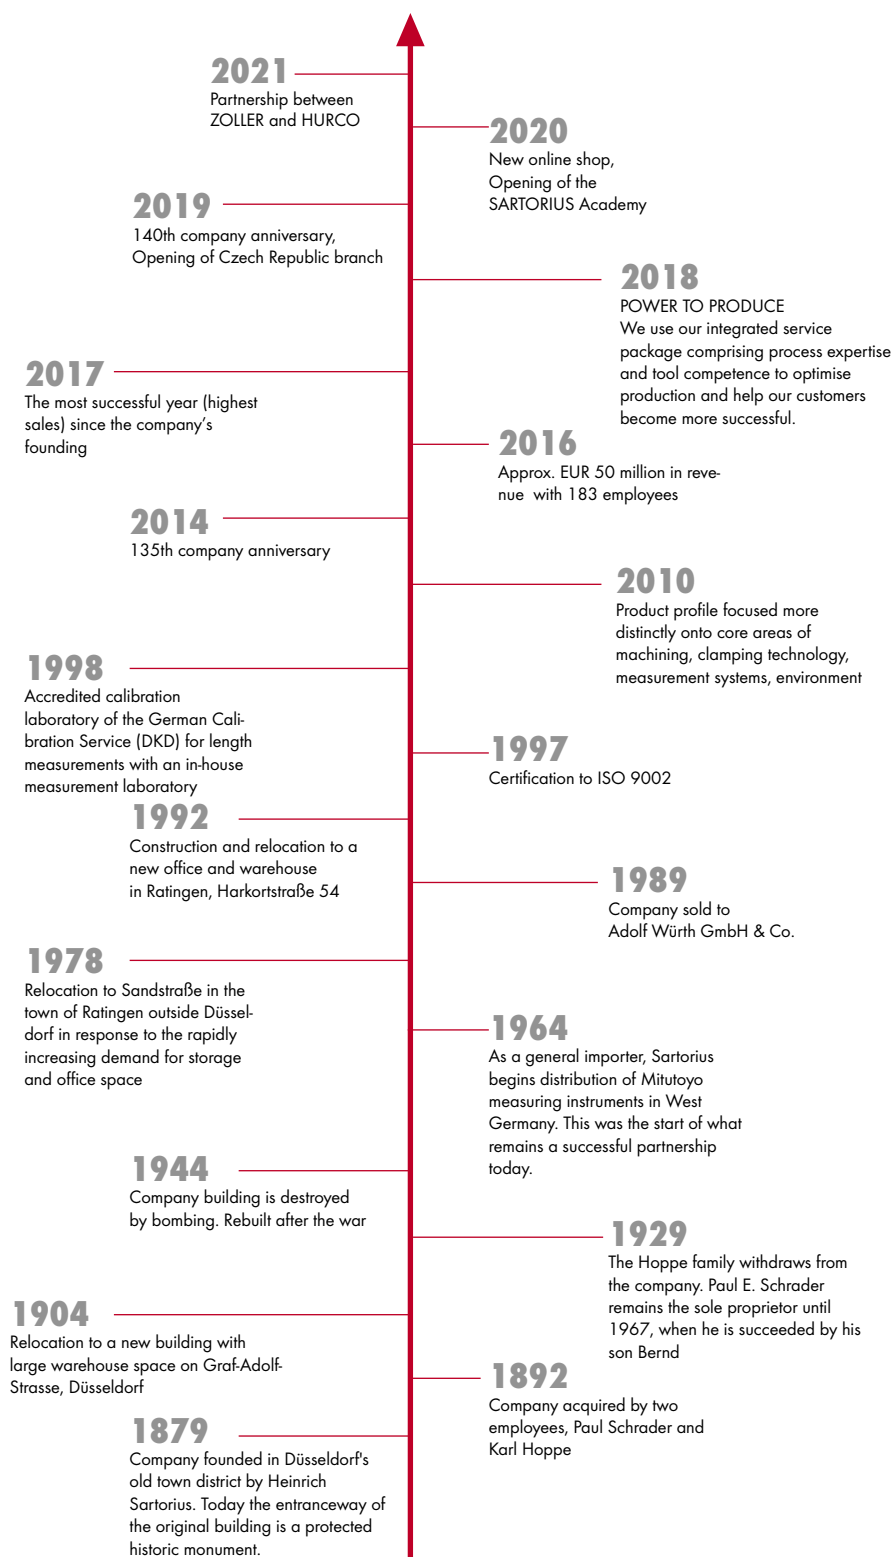

You don't always have to buy a new one: our resharpening and coating service breathes new life into your old drill bits, milling cutters, saw blades, etc. and gives them back their POWER TO PRODUCE.

## **0% FINANCING**

Finance your purchase with us – with no interest or processing fees (eligibility assumes a good credit rating). The minimum financing amount is €2,500 over a financing period of up to six months. You can pay off your SARTORIUS financing loan at any time and at no extra cost.

# POWER TO PRODUCE SINCE 1879

# FOR OPTIMISED PROCESSES AND PERFECT INFORMATION: OUR TOOLS AND **DIGITAL** **SERVICES**

**SARTORIUS IS THERE FOR EVERYONE. INCLUDING OUR ONLINE CUSTOMERS.  
OUR TOOLS AND DIGITAL SERVICES ARE A POWER UPGRADE  
FOR YOUR COMPUTER.**

## **SMALL TOOLS, HUGE SUPPORT**

Our digital tools help you to make your manufacturing processes even more efficient.

- Electronic tool selection programme
- Clamping jaws finder
- Toodle Configurator
- Product and diameter reference values for all machining products in different material groups
- Presentation of extensive product data and technical features
- Optimised search functions for products, accessories and spare parts
- Tool data for CAD / CAM systems (STEP AP214 / DIN SPEC 68874 / BMG / 3D-PDF, etc.)
- Strategic cooperation with CAD / CAM software specialists

# QUICK FIND MORE QUICKLY RECEIVE

## FIND THE RIGHT TOOL IN JUST A FEW CLICKS

- 250,000 items, 40,000 of which are in stock
- Intelligent search
- Customer-specific item number management
- Online catalogue
- Online offers and outlet area

## CONVENIENT ONLINE SHOPPING

- Best price principle
- No minimum order value
- Article availability in real time
- Availability 24/7
- Quick order via import
- One of the fastest shops in the industry
- Display of alternative items
- Approval procedure
- Transparent price comparison

## EUROPE-WIDE DELIVERY.

24 hour delivery

# EFFICIENCY

## REDEFINED

**THE SHOPPING MALL FOR ONLINE SHOPS. IN ADDITION TO OUR ONLINE SHOP, WE ARE REPRESENTED ON ALL MAJOR PROCUREMENT PLATFORMS. THE TRANSFORMATION TO DIGITAL PURCHASING HAS BEGUN.**

### **SO YOU ALWAYS HAVE AN OVERVIEW**

- Connection to merchandise management
- Procurement portals / platforms
- EDI connection
- Rapid implementation
- Process optimisation

# DIGITAL TOOL DATA FOR DOWNLOAD

## COMPUTER-AIDED MANUFACTURING

(Computer-aided manufacturing) is becoming more and more popular with a wide range of companies. The advantage of CAD/CAM software is that it replaces actual machine programming, enabling more flexible and economical production using new strategies. Information from tools and clamping devices is needed to enable an accurate simulation. The relevant data is generally provided as 3D volume models (step files), enabling the direct detection of interfering contours and potential collisions during the simulation.

- **Step files**

3D volume models of single tools or complex assemblies

- **DXF files**

in simple or detailed design  
(e.g. with or without coolant bores/chip flute)

# IF YOU HAVE ADDITIVE IS A FAMILIAR WORD IN MANUFACTURING.

THAT'S POWER TO PRODUCE

## 3D OBJECTS FOR PROFESSIONAL APPLICATIONS EASY CONFIGURATION, SIMPLE ORDERING, SWIFT DELIVERY

### SARTORIUS TOOLS AND PROTIQ

Additive manufacturing is a process through which an object is formed through the gradual application of materials based on digital 3D construction data. This application-based manufacturing process differs significantly from abrasion-based manufacturing methods. For example, instead of milling a workpiece from a solid block, additive manufacturing forms components from materials layer by layer. A wide variety of materials, such as metal, plastics and composites are available. Additive manufacturing is particularly suited to the production of prototypes or small batches.

# IT'S AS SIMPLE AS THAT

Our services are not only high quality, they are also easy to use. You can access the PROTIQ-Market-Place via [www.sartorius-werkzeuge.de](http://www.sartorius-werkzeuge.de). Here you can configure individual objects or entire assemblies swiftly and conveniently. The portal also facilitates the approval process: Each customer account can include several employees with varying roles.

So you can easily configure and order high-quality 3D objects in no time:

**PROTIQ**  
A Phoenix Contact Company

## FOR EVERY REQUIREMENT THE RIGHT SOLUTION

The basis for this is our diverse range of materials and manufacturing methods, supplemented by key services in additive manufacturing, such as training, reverse engineering and finishing.

Our portal itself is loaded with functions that actively support your business processes. For example, you have access to a convenient approval and ordering process and can upload entire assemblies to the configurator.

**CREATE a 3D FILE**  
We process all conventional file formats.

**UPLOAD the file**  
Drag'n'Drop the file into the upload field - done! Your file is automatically checked and corrected if necessary.

**CONFIGURE YOUR OBJECT AND/OR ASSEMBLY**  
You can adjust the size, colour and finish. The corresponding price is displayed instantly.

**WE PRINT your ORDER**  
We manufacture quickly, with high precision and high-quality materials.

**Your ORDER IS DISPATCHED**  
We dispatch your order by express delivery on request.

# **SARTORIUS ACADEMY**

**POWERED BY ATORN**

**THAT'S POWER TO PRODUCE**

# INVESTMENT IN KNOWLEDGE FOR A PROSPEROUS FUTURE.

## FROM A VISION TO A CENTRE OF EXCELLENCE

Every journey begins with the first step. The first step towards the SARTORIUS Academy was taken in 2016. True to our POWER TO PRODUCE motto, we wanted to be closer to the customer. From pure tool merchant to experts in manufacturing. For this transformation to succeed, one aspect was paramount: the creation of our own academy. This objective was realised in conjunction with HURCO.

Founded in the USA 51 years ago, HURCO now develops and produces interactive computer controls, software and computer-aided machine tools predominantly in Europe.

And precisely two of these machines are now in the Academy. This is the perfect environment to test tools, to put innovations through their paces live on-site and to remedy user problems.

## KNOWLEDGE TRANSFER FOR YOU, YOU AND YOU

Demographic change is no longer a nightmare scenario, but an industry-changing reality in the labour market. It requires the clever handling of newly-created options for increasing digitisation, whilst taking altered systematic processes into account. We recognise that and so do our customers. A skills shortage diminishes know-how. Meanwhile, the demands for productivity, efficiency and data processing are increasing.

In this difficult time of change it is important to take demographic development and changing job profiles into account, in addition to supplying the right tools, the corresponding knowledge and a cohesive production cycle. Specifically, this represents the intelligent networking of goods issue, through inputting the corresponding data into the machine, right up to the automatic reordering of the tools used. Or more simply: Industry 4.0. Toolmakers are increasingly becoming data technicians, which is no less challenging, but shifts responsibility onto finding solutions in manufacturing processes. All the more important is SARTORIUS Academy, where we can work on precisely these solutions.

In fact, SARTORIUS Academy is no less than a transition into a new era, in which our own employees are trained to develop solutions with customers and where Industry 4.0 can be experienced up close. Merchandise and knowledge enter into a virtually inseparable symbiotic relationship. We call this: POWER TO PRODUCE.

### REQUESTING THE RESHARPENING BOX

On request we provide you with a resharpener box, free of charge, to ensure the safe transit of your tools.

This can be requested free of charge from our Service Team:

E-mail: [service@sartorius-werkzeuge.de](mailto:service@sartorius-werkzeuge.de)

### FREE COLLECTION

Free, next-working-day collection of your tools within Germany with our transport boxes (eco-friendly reusable packaging).

Your tools are securely delivered within 24 hours. You can also send your tools via a parcel service of your choice to:

SARTORIUS Werkzeuge GmbH & Co. KG

Resharpener service

Harkortstraße 54

40880 Ratingen

### RECEIPT OF THE TOOLS

We check the type, size and efficiency of the tools - tools that cannot be resharpened shall be returned with the rest of the tools.

### MACHINING

- Resharpener
- Coating
- Quality control
- Measurement log (on request)

Please be advised that if a cost estimate is rejected, a processing fee of €30 net will be charged.

The production areas are divided as follows:

- CNC grinding technology - shank tools
- CNC grinding technology - saw blades
- CNC grinding technology - drill bits
- Special tools and carbide saw blades
- Surface grinding technology
- Grinding rings
- Coating technology

### DELIVERY

You can expect the return of your tools - resharpened, coated and measured (optional) - within 12 working days.

## Regrinding service

- Restoration of the original grinding, with new coating on request
- Fast processing, short waiting times
- Resharpener of other tools available on request
- The prices specified are a guide only

- Additional costs are calculated based on outlay: e.g. regrinding of sets, extra-long milling cutters, trimming and re-facing

## Coating service

- Coating and recoating to maintain or improve the performance of machining tools
- Small layer thicknesses in the  $\mu$  range provide significantly better wear protection
- Fast processing, short waiting times
- Other types of coating and coatings for other tools available on request

**Standardised test equipment monitoring service**

**INFO**

**ONE CONTACT – EVERYTHING FROM A SINGLE SOURCE**

Melutec Metrology GmbH is a calibration laboratory confirmed and accredited by DAKKS "Deutsche Akkreditierungsstelle GmbH" with respect to dimensional measurands (length, coordinate metrology, angles), mechanical measurands (torque, balances) and thermodynamic measurands (temperature and relative humidity) in accordance with DIN EN ISO/IEC 17025:2018. Melutec offers

comprehensive consulting services for test equipment monitoring and calibration of all physical quantities and measuring units. We can repair and service test equipment on request. Melutec also calibrates stationary test equipment on site. Significant, internationally recognised test certificates and short turnaround times round out our range of services.

**DAKKS CALIBRATION SERVICES FOR THE FOLLOWING ELEMENTS:**

**Hand-held measuring equipment**

- Vernier calliper
- Outside micrometers
- Setting gauges
- Built-in, special and depth micrometers
- Inside measuring instruments (Subito, splayed sensors and bore gauge)
- Inside micrometers with 2-point and 3-line contact
- Height callipers
- Thread measuring wires
- Thread measuring inserts
- Length measuring devices up to 5000 mm
- Height meters
- Electronic displacement transducer, inductive probe

**Gauge blocks and gauges**

- Gauge blocks
- Thread gauges (all measurement methods)
- Test pins
- Limit plug gauges
- Precision dial gap gauge
- Ring gauges

**FACTORY CALIBRATION FOR TEST EQUIPMENT**

- All DAKKS calibration articles
- Diameter
- Length
- Thread
- Form
- Electrical measuring instruments

**Dial indicators**

- Dial indicators
- Dial indicator measuring devices
- Lever dial indicators
- Precision dial comparator

**Aids**

- Straightedges
- Gauge block measuring devices
- Tape measures
- Graduated scales
- Tape measuring devices up to 5000 mm
- Angle (bevel edge, framing and try square)
- Feeler and radius gauges
- Gap gauges
- Granite surface plate

**Temperature and mass**

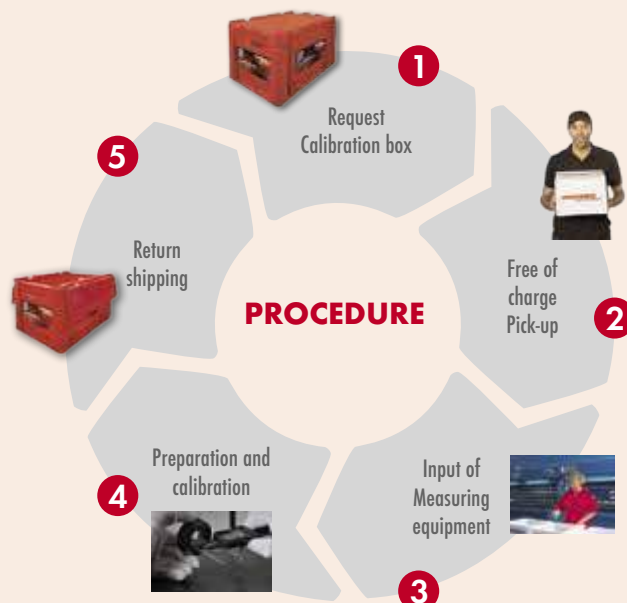

- Scales
- Thermometer
- Hygrometer
- Moisture meter

**Optics**

- Measuring microscopes
- Measuring projectors

**Other**

- Roundness
- Straightness
- Cylindrical shape
- Parallelism
- Torque wrench
- Reference spheres for coordinate measuring devices
- Flatness and planarity standards
- Stylus
- Electronic measuring probe
- Test cylinder
- Dumbbell ball calliper for thread measurement
- Magnification standard (Flick)
- Planar and coplanar test glasses

**FREE COLLECTION**

Free, next-working-day collection of measuring equipment within Germany with our calibration box (eco-friendly reusable packaging). Measuring equipment securely delivered within 24 hours.

Measuring equipment can also be sent in using a courier service:

SARTORIUS Werkzeuge GmbH & Co. KG  
 Calibration service  
 Harkortstraße 54  
 40880 Ratingen, Germany

### PROCAL-PMV

ProCal-PMV software enables a large number of daily work steps to be carried out automatically, where previously this would have required considerable personnel, time and financial resources. The ProCal-PMV test equipment management system enables automatic electronic data reconciliation between the customer and the calibration laboratory. Test equipment data is automatically selected and extracted. When extracting data to the calibration laboratory, the test equipment statuses are set automatically. When loading data from the calibration laboratory, all dependent histories are automatically updated and calibration data is added.

### ADVANTAGES

- Access over any internet connection
- no installation of software on your computers
- Fulfils all standard requirements, such as ISO 9001, IATF 16949, DIN EN ISO/IEC 17025
- Various filter options to narrow down detailed data for test equipment management
- Cost savings by defining inspection intervals (e.g. 1 year, 6 months, 78 days)
- The test equipment history provides information about the condition of the test equipment
- various management options regarding allocation of information such as cost centre, place of use, etc.

## Calibration of indicating measuring instruments

- **DAkkS calibration:** Calibration and documentation in accordance with „Deutscher Akkreditierungstelle GmbH“
- **Factory calibration:** Testing and documentation in compliance with VDI/VDE/DGQ 2618, in accordance with the manufacturer's instructions or in accordance with national or international guidelines
- Unless otherwise specified in the order, an accredited calibration is performed as standard.

**DAkkS calibration  
including  
DAkkS plate**

## Calibration of gauge blocks

- Depending on user requirements, we offer different scopes of calibration for gauge blocks:

**Factory calibration:** Calibration and documentation in compliance with VDI/VDE/DGQ 2618 Sheet 3.1 Option 5.3.3

**DAkkS calibration:** Calibration and documentation in compliance with DKD directives 4-3 Sheet 3.1 Option 5.3.2

**DAkkS calibration  
including  
DAkkS plate**

### In accordance with DIN EN ISO 3650, acc. 0, 1 or 2

- Steel, carbide or ceramics
- Individual gauge blocks > 1000 mm, available on request
- Intermediate dimensions are special dimensions that are not usually available in standard sets (e.g. 5.1 mm or 50.45 mm).

## Calibration of appliances

- **DAkKS calibration:** Calibration and documentation in accordance with „Deutscher Akkreditierungstelle GmbH“
- **Factory calibration:** Testing and documentation in compliance with VDI/VDE/DGQ 2618, in accordance with the manufacturer's instructions or in accordance with national or international guidelines
- Unless otherwise specified in the order, an accredited calibration is performed as standard.

### Flat rulers

**Engraving, inspection plate and sealing**

- Engraving the identification number on measuring equipment
- Attaching the inspection plates

For attaching the inspection plate, please specify the month and year of the next calibration in the order; otherwise a recalibration period of 12 months is assumed.

- Sealing

The gauges can be sealed with wax dipping compound on request.

A BRAND OF SARTORIUS WERKZEUGE

**TOOL REPAIR SERVICE**

- **Time advantage:** time required for replacement is shorter than the time to produce a new tool
- State-of-the-art reconditioning of damaged machining tools with indexable insert seats
- We guarantee the tolerances, geometrical shapes and wear resistance specified by the original tool manufacturer for standard tools, and also for drawing-based special tools
- Measurement logs on request (measurement logs are only useful from a technical perspective if all insert seats have been repaired or revised, as otherwise the tolerances of the tool cannot be fully guaranteed).
- Reduces tooling costs in manufacturing division: the costs of refurbishment are only approx. 50% of new prices.
- Short delivery times
- Please send the tools, carriage paid, to our address.
- Tools are sent back on payment of the costs incurred.
- Upon request, you will receive a cost estimate immediately after the test.

**Der Vorher-Nachher-Effekt****MEASURING EQUIPMENT REPAIR**

- Repair of your measuring equipment
- Virtually all well-known brands
- Save up to 50% compared to the original price
- New measuring equipment at a special price in cases where repair would be uneconomical
- On request: Calibration through our partner laboratory

**Further information:**

## ATORN® Centring drills with radius

HSS DIN 333 R 60° k12 h7 Z 2 Vc/fz 360

- For centring holes with radius DIN 332 R
- combines an annular application of the workpiece at the centre point with the advantages of a bell-type countersink, improved fit of the workpiece
- Greater stability due to radial transition
- Reduces risk of breaking
- Spiral-fluted, bare surface

material	● very well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper	graphite	hardened steel

### ATORN® Twist drill bit

HSS-E
DIN 1897
Typ TLP
130°
38°
h8
3xD
Z 2
i Vc/tz 363

- S° = point angle 130° (self-centring)
- Type TLP, uncoated

material	● very well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper	graphite	hardened steel

### ATORN® KSB-3D twist drill

HSS-E PM
DIN 1897
118°

38°
h8
3xD
Z 2
TiN

364

- Low wear on cutting edges
- Especially resistant to high temperatures
- **Extended service life**
- Excellent chip removal
- **Short chips**

- Large chip spaces, high toughness
- Reduced heat build-up
- Shank design: straight
- **From Ø 12.1 with driving plane in accordance with DIN 1835B**
- S° = point angle: < Ø 2 mm = 140°, ≤ Ø 4 mm = 130°, > Ø 4 mm = 120°
- Centring geometry: up to Ø 13 mm S version, from Ø 13.5 mm N version
- Available on request: Intermediate dimensions from Ø 0.5 to Ø 6 mm (in 0.01 mm increments)

## ATORN® Twist drill bit

- **Offset uniform shank**
- Clamping and tooling benefits due to uniform length of straight shank irrespective of diameter
- **Vapour-treated**

## ATORN® Micro drill

- **Reinforced shank**
- Profile-ground
- **High true-running accuracy and precision-ground point**
- Diameter tolerance 0/-0.004 mm
- HSS-E-PM for high cutting rates and high rigidity

From Ø 0.05 mm

h8
5xD
Z 2
i Vc/tz 366

- Special point thinning
- Self-centring
- 4-facet grinding
- **For universal applications**
- Smooth operation
- **Low torque**
- Optimum chip removal with round groove profile

**Universal multi-purpose drill bit**

## ATORN® Twist drill, with 3 surface shank

HSS-E HSS-E DIN 338 Typ VA 135° 40° h8 5xD Z 2 i Vc/fz 368

- **3-facet grinding** on shank (from Ø 4 mm) for optimum transfer of force and secure hold in the drill chuck, no possibility of slippage
- Low force application when opening and closing in the drill chuck
- **Special surface treatment** in conjunction with relief grinding for maximum lubricant adhesion and for fast, reliable chip removal
- Designed especially for use on portable drilling machines

**also ideal for stainless steel**

- Large chip spaces, high toughness
- **Reduced heat build-up**
- Shank design: straight
- **From Ø 12.1 with driving plane in accordance with DIN 1835B**
- S° = point angle: ≤ 4 mm = 130°, > 4 mm = 120°
- Centring geometry: up to Ø 13 mm S version, from Ø 13.5 mm N version
- Available on request: Intermediate dimensions from Ø 2 to Ø 6 mm (in 0.01 mm increments)

- For deep bores (multiple chip removal)
- vapour-treated from Ø 2.4 mm, point thinning from Ø ≥ 1 mm
- Profile-ground to meet the highest demands for process reliability
- Pilot hole recommended

### ATORN® Twist drill bit

HSS
DIN 340
Typ TLP
130°
38°
h8
10xD
Z 2
TiN
i Vc/fz 369

- For deep bores (no chip removal)
- **Wide chip flutes for better chip removal**
- Point thinning from Ø > 1 mm
- Profile-ground to meet the highest demands for process reliability
- **Pilot hole recommended**

**Deep bore profile**

### ATORN® Twist drill bit

- Wide chip flutes
- Profile-ground, chamfers nitrided from a diameter of 2.4 mm
- High wear-resistance
- Recommended in cases of poor chip removal
- **Pilot hole recommended**

**Stainless steel**

- For deep bores (multiple chip removal)
- Point thinning from  $\varnothing \geq 1$  mm
- Increased wear-resistance with special geometry for machining stainless steel
- Pilot hole recommended

# ATORN® Deep hole drill bit

HSS
DIN 1869
Typ TLP
130°
38°
h8
>10xD
Z 2
i Vc/tz
370

- For extremely deep bores, 15xD to 25xD
- Flat slot shape for increased chip space, leading to less frequent chip removal in particularly deep holes
- Point thinning from Ø ≥ 2 mm
- Slots bare
- Nitrided chamfers from Ø 2.5 mm
- Pilot hole recommended

**Deep bore profile**

# TDXL high-performance deep hole drill

HSS-E
Werk-norm
Typ TLP
120°
40°
10xD
15xD
20xD
TiAlN
*i* Vc/tz 370

- Flat flute for increased chip space, drilling without chip removal
- Bore depths of 10xD, 15xD and 20xD
- New chip flute structure for enhanced chip removal, polished wave-shaped flute
- Newly developed point thinning for lower torque, axial force and friction
- New heat and wear-resistant WXL coating with a very low friction coefficient
- **Cutting material: HSS-E, WXL-coated**
- Shank tolerance h7
- Use with water-soluble emulsion recommended
- **Without internal cooling**
- **Pilot hole recommended**

**Drilling without chip removal**

## ATORN® Twist drill bit (drilling bush), with MT shank

HSS
DIN 341
Typ N
118°
30°
h8
10xD
Z 2
Vap.
Vc/fz 371

- Special geometry
- **For drilling through drill guide bushes**
- In comparison to DIN 345, the spiral length is extended by the height of the drill guide bush so that the effective drilling depth is not reduced
- Morse taper shank
- **Vapour-treated**

# ATORN® Core drill with MT shank

HSS
DIN 343
Typ N
120°
25°
h8
Z 3
Vc/fz 371

**3 cutting edges**

- **MT shank with driving pin lugs in accordance with DIN 228**
- Robust drill with strong core for optimum guidance in the bore hole
- **For drilling pre-drilled, pre-cast or pre-punched holes**
- The sturdy design and 3 cutting edges correct alignment inaccuracies and roundness issues in prefabricated holes
- **Also available with straight shank where required**

## SARA® STEP step drill

HSS
Werks-norm
TiN

- **For burr-free drilling and reaming of sheet metal, pipes and sections and one-sided deburring in a single operation**
- The exact bore diameter results from the cylindrical graduation, the ground section of each step deburrs the next smaller bore diameter
- Point thinning in accordance with DIN 1412 C
- Especially suitable for use on hand drills when drilling thin materials
- **Corner breakers for double-sided deburring** (up to 1.5 mm sheets)
- No need for pre-drilling or centre punching even with curved surfaces
- **Straight shank with 3 driving planes prevents "slipping" in the chuck**
- Laser scaling of bore diameters and rotational speed data
- **Note:** material thickness suitable up to 5 mm

material	● very well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper Cu-alloy	graphite GRP/CFP/thermo.	hardened steel

**EUROBOOR Core drills**  
FOR PROFESSIONALS BY PROFESSIONALS

- **Strong HSS core drill**
- Super-fast drilling times and longer service life
- Guaranteed core removal
- **5 to 10 times longer service life than with a traditional twist drill bit**
- **No pre-drilling required**
- Surface is smooth and burr-free
- **Precise centring by means of guide pin**
- Other versions up to Ø 130 mm and various cutting material qualities (e.g. HSS-Co8) available on request

**Ideal for machines with low drive power**

## ATORN® Centring drills

- For centring holes without protected centre DIN 332 A
- Spiral-fluted, bare surface
- Precision-ground version, high true-running accuracy
- With application of the workpiece to the centre point over a large surface area
- Suitable for heavy workpieces when using revolving centre points

## ATORN® NC spotting drill

NEW

VHM Werks-norm 90° 120° 142° DIN 6535 HB Vc/tz 361

- S° = 90°, 120° and 142° point angle
- Straight shank with clamping surface in accordance with DIN6535-HB (from Ø 6mm)
- **Cutting material: SC, uncoated**
- Spot drilling and countersinking on NC and CNC machines
- 142° point angle version for spot drilling for the next twist drill operation

material	● very well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper	graphite	hardened steel

## ATORN® NC spotting drill

NEW

VHM Werks-norm 90° 120° 142° DIN 6535 HB TiAlN Vc/tz 361

- S° = 90°, 120° and 142° point angle
- Straight shank with clamping surface in accordance with DIN6535-HB (from Ø 6mm)
- **Cutting material: SC, TiAlN-coated**
- Spot drilling and countersinking on NC and CNC machines
- 142° point angle version for spot drilling for the next twist drill operation

## ATORN® Solid carbide high-performance drill bit TiAlNplus HPC

INFO

The new ATORN TiAlNplus HPC solid carbide drill bit range covers a variety of materials. Thanks to the modern cutting material and innovative, newly-developed geometry the tools offer enormous capacity. What's more, they come in a variety of different materials with maximum process reliability and efficiency. You can benefit from the enormous breadth and depth of this range.

- Features:**
- 25 % longer service life compared with competitors
  - Wide range of applications (steel, stainless steel, cast iron and aluminium)
  - Newly developed TiAlNplus coating

Significantly increased service life and reduced process temperature

High wear-resistance combined with maximum toughness

Low cutting forces

Perfect concentricity

Minimised breakages

Perfect chip removal

Low friction

# ATORN® Solid carbide micro drill bit

- $S^\circ = 130^\circ$  point angle,  $118^\circ$  up to a diameter of 0.35 mm
- **Cutting material: ultra-fine grain solid carbide**
- Tolerance D = 0.004 mm

# Solid carbide high-performance drill bit ADO-MICRO

VHM Werks-norm Typ TLP 140° 135° 30° 2xD 5xD 12xD 20xD 30xD DIN 6535 HA TiAlN Vc/fz 379

- 2xD, 5xD: 0.7-2mm, 12xD, 20xD, 30xD: 1-2mm
- **SC material, IchAda coating**
- Double guide chamfers for a high degree of stability
- Internal coolant supply with a hollow shank increases the flow rate

Deep-hole bores with minimal diameters

material	● very well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper Cu-alloy	graphite GRP/CF/thermo.	hardened steel

## ATORN® Solid carbide twist drill bit set

- Set supplied in a case
- Diameter 1.0 to 10.0 mm in 1.0 mm increments
- Sturdy twist drill bits for automated units / capstan lathes

material	● very well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper Co-alloy	graphite GRP/EPF/thermo.	hardened steel

## SARA® TiNplus HPC 3D solid carbide high-performance drill bit without internal cooling

- Newly developed geometry with reinforced core and special point thinning
- **Solid carbide ultra-fine grain cutting material TiNplus** (TiAlN+TiN)
- Modern multi-layer hard coating for maximum service life and optimum chip transport
- High centring accuracy
- **For universal applications**
- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- Shank designs up to Ø 2.9 mm HA, from Ø 3.0 mm HB

# ATORN® TiAlNplus HPC 3D solid carbide high-performance drill bit without internal cooling

VHM
DIN 6537
Typ U
140°
30°
3xD
DIN 6535 HA
DIN 6535 HB
TiAlNplus
i Vc/tz
375

- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- **Cutting material: Solid carbide ultra-fine grain TiAlNplus**
- Efficient drilling in different materials
- Newly developed geometry in conjunction with a customised multilayer coating for enhanced performance
- Special cutting edge finishing reduces micro-nicks and increases service life

**ATORN**<sup>®</sup>  
Performance demands quality

# SARA® TiNplus HPC 3D solid carbide high-performance drill bit with internal cooling

- Newly developed geometry with reinforced core and special point thinning
- **Solid carbide ultra-fine grain cutting material TiNplus** (TiAlN+TiN)
- Modern multi-layer hard coating for maximum service life and optimum chip transport
- High centring accuracy
- **For universal applications**
- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- **With internal cooling**

### ATORN® TiAlNplus HPC 3D solid carbide high-performance drill bit with internal cooling

- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- **Cutting material: Solid carbide ultra-fine grain TiAlNplus**
- Efficient drilling in different materials
- Newly developed geometry in conjunction with a customised multilayer coating for enhanced performance
- Special cutting edge finishing reduces micro-nicks and increases service life
- **With internal cooling**

### ATORN® Solid carbide high-performance drill bit Ultra-M 3D

**Especially for stainless steel**

- Special geometry, facet-ground, maximum tool life, high process reliability
- Shank design:  
HA with coolant bore, smooth straight shank, DIN 6535 HA  
HB with coolant bore straight shank DIN 6535 HB
- **Cutting material: solid carbide, TiAlN-Ultra-M-coated**
- True-running accuracy of the tool when clamped max. 0.02 mm
- **Especially suitable for stainless steel and superalloys**

# ADO-SUS-3D solid carbide high-performance drill

VHM
Werks-norm
Typ VA
140°
30°
3xD
DIN 6535 HA
TiAlN
i Vc/fz
382

- **Cutting material: solid carbide, EgiAs coating**
- Sharp cutting edges reduce machining-induced material hardenings
- **Short and compact chips thanks to innovative chip flute geometry**
- Friction-reducing protective chamfer reduces heat development
- **New coolant bore design increases coolant flow rate and thus reduces heat generation in the material**
- Increased coating adhesion of the new EgiAs coating reduces premature wear and coating spalling

### ATORN® Solid carbide high-performance drill bit HARD 3D

NEW

VHM Werks-norm Typ H 140° 20° 3xD DIN 6535 HA TiAlSiN i Vc/fz 374

- for machining drill holes up to 65 HRC
- **Cutting material: SC, TiAlSiN coating**
- reinforced core and special point thinning with sharp chisel edge
- no internal coolant supply for increased stability
- **also available in 5xD**
- **Note:** Do not hard drill dry!

Up to 65 HRC

# ATORN® TiAlNplus HPC 5D solid carbide high-performance drill bit without internal cooling

- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- **Cutting material: Solid carbide ultra-fine grain TiAlNplus**
- Efficient drilling in different materials
- Newly developed geometry in conjunction with a customised multilayer coating for enhanced performance
- Special cutting edge finishing reduces micro-nicks and increases service life
- **Without internal cooling**

A BRAND OF SARTORIUS WERKZEUGE

# SARA® TiNplus HPC 5D solid carbide high-performance drill bit with internal cooling

- Newly developed geometry with reinforced core and special point thinning
- Solid carbide ultra-fine grain cutting material TiNplus** (TiAlN+TiN)
- Modern multi-layer hard coating for maximum service life and optimum chip transport
- High centring accuracy
- For universal applications**
- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- With internal cooling**
- Shank designs up to Ø 2.9 mm HA, from Ø 3.0 mm HB

Grooving from 2 mm ...

... with internal cooling.

**ATORN**<sup>®</sup>  
Performance demands quality

# ATORN® TiAlNplus HPC 5D solid carbide high-performance drill bit with internal cooling

- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- **Cutting material: Solid carbide ultra-fine grain TiAlNplus**
- Efficient drilling in different materials
- Newly developed geometry in conjunction with a customised multilayer coating for enhanced performance
- Special cutting edge finishing reduces micro-nicks and increases service life
- **With internal cooling**

# HYP-HPO-5D solid carbide high-performance drill bit

NEW

- Universal geometry
- **Cutting material: Solid carbide WDI coating (TiAlN)**
- With internal cooling

Deep drilling ...

... with brainpower.

**ATORN**<sup>®</sup>  
Performance demands quality

# ATORN® Solid carbide high-performance drill bit Ultra-M 5D

- Special geometry, facet-ground, maximum tool life, high process reliability
- Shank design:

HA with coolant bore, smooth straight shank, DIN 6535 HA

HB with coolant bore straight shank DIN 6535 HB

- **Cutting material: solid carbide, TiAlN-Ultra-M-coated**
- True-running accuracy of the tool when clamped max. 0.02 mm
- **Especially suitable for stainless steel and superalloys**

**Especially for stainless steel**

### ADO-SUS-5D solid carbide high-performance drill

VHM Werks-norm Typ VA 140° 30° 5xD DIN 6535 HA TiAlN Vc/fz 382

- **Cutting material: solid carbide, EgiAs coating**
- Sharp cutting edges reduce machining-induced material hardenings
- **Short and compact chips thanks to innovative chip flute geometry**
- Friction-reducing protective chamfer reduces heat development
- **New coolant bore design increases coolant flow rate and thus reduces heat generation in the material**
- Increased coating adhesion of the new EgiAs coating reduces premature wear and coating spalling

material	● very well suited ○ well suited		steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium	copper	graphite	hardened steel

# SARA® Solid carbide high-performance drill bit ALU 5D

**Aluminium**

- Twisted coolant bore
- **Cutting material: solid carbide, ZrN-coated**
- Special rounded-off cutting edges to minimise micro-nicks

material	● very well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper Cu-alloy	graphite GRP/CFP/thermo.	hardened steel

# ATORN® Solid carbide high-performance drill bit AluSpeed 5D

- Twisted cooling channel
- **6-fold guide chamfers, guarantees very high alignment precision and stabilisation of the drill bit**
- **Cutting material: ultra-superfine grain solid carbide K40F, Alu-CC-coated**
- Defined cutting-edge rounding to minimise micro-nicks on the tool cutting edge
- Coolant pressure min. 12 bar

**ATORN® Solid carbide high-performance drill bit HARD 5D**

**NEW**

VHM Werks-norm Typ H 140° 20° 5xD DIN 6535 HA TiAlSiN i Vc/fz 374

- for machining drill holes up to 65 HRC
- **Cutting material: SC, TiAlSiN coating**
- reinforced core and special point thinning with sharp chisel edge
- no internal coolant supply for increased stability
- **also available in 3xD**
- **Note:** Do not hard drill dry!

**Up to 65 HRC**

Drilling and turning ...

... with a single tool.

**ATORN®**  
Performance demands quality

# ATORN® TiAlNplus HPC 8D solid carbide high-performance drill bit with internal cooling

- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- **Cutting material: Solid carbide ultra-fine grain TiAlNplus**
- Efficient drilling in different materials
- Newly developed geometry in conjunction with a customised multilayer coating for enhanced performance
- Special cutting edge finishing reduces micro-nicks and increases service life
- **Excellent alignment precision thanks to 4 guide chamfers**
- High process reliability, even at difficult-to-reach bore depths
- With internal cooling

### ATORN® TiAlNplus HPC 12D solid carbide high-performance drill bit with internal cooling

VHM
Werk-norm
Typ TLP
140°
30°
12xD
DIN 6535 HA
TiAlN plus
i Vc/tz 377

- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- **Cutting material: Solid carbide ultra-fine grain TiAlNplus**
- Efficient drilling in different materials
- Newly developed geometry in conjunction with a customised multilayer coating for enhanced performance
- Special cutting edge finishing reduces micro-nicks and increases service life
- **Excellent alignment precision thanks to 4 guide chamfers**
- High process reliability, even at difficult-to-reach bore depths
- With internal cooling

### ATORN® Solid carbide pilot drill bit TiAlNplus HPC

- For setting a pilot bore for deep-hole drill bits from 1.2xD
- **Cutting material: ultra-superfine grain solid carbide TiAlNplus**
- Precision-ground for extreme boring accuracy to meet high dimensional demands
- High guidance accuracy thanks to innovative geometry
- High-performance coating guarantees high cutting data and service life
- The tools are coordinated by geometry and diameter.

### ATORN® Solid carbide deep-hole drill bit TiAlNplus HPC 16D

- High-performance deep-hole drill bit with 4 guide chamfers
- **Cutting material: ultra-superfine grain solid carbide TiAlNplus**
- Excellent all-round properties and precise cutting behaviour with high cutting data
- Unique, extremely tough, smooth, temperature-resistant and close contour TiAlN coating
- Cutting-edge preparation minimises micro-nicks on the tool cutting edge
- Range is coordinated by angle and diameter

## Solid carbide pilot drill ADO-PLT

VHM Werks-norm Typ PLT 160° 30° DIN 6535 HA TiAlN i Vc/fz 379

- for positioning a pilot bore for deep-hole drills from 10xD
- with optimised shank diameter tolerance, suitable for use in shrink-fit holders
- **Cutting material: SC EgiAs-coated**
- Optimum chip removal with special cutting geometry and large chip spaces
- True-running accuracy of the tool when clamped: max. 0.02mm
- Cutting edge tolerance h8

379

- With optimised shank diameter tolerance, suitable for use in shrink-fit holders
- **Cutting material: SC EgiAs-coated**
- High-performance drill for cost-efficient manufacturing of deep bores up to 15xD with no step
- Optimum chip removal with special cutting geometry and large chip spaces
- True running accuracy of the tool when clamped: max. 0.02mm
- Cutting edge tolerance e8

### Solid carbide deep-hole drill ADO-30D

379

- With optimised shank diameter tolerance, suitable for use in shrink-fit holders
- **Cutting material: SC EgiAs-coated**
- High-performance drill for cost-efficient manufacturing of deep bores up to 30xD with no step
- Optimum chip removal with special cutting geometry and large chip spaces
- True running accuracy of the tool when clamped: max. 0.02mm
- Cutting edge tolerance e8

### Solid carbide deep-hole drill ADO-40D

NEW

VHM
Werk-norm
Typ TLP
140°
25°
40xD
DIN 6535 HA
TiAlN
i Vc/fz
379

- With optimised shank diameter tolerance, suitable for use in shrink-fit holders
- **Cutting material: SC EgiAs-coated**
- High-performance drill for cost-efficient manufacturing of deep bores up to 40xD with no step
- Optimum chip removal with special cutting geometry and large chip spaces
- True running accuracy of the tool when clamped: max. 0.02mm
- Cutting edge tolerance e8

## ADF-2D solid carbide flat drill

VHM Werks-norm Typ N 180° 20° 2xD TiAlN *i* Vc/fz 382

- Suitable for a variety of applications, such as inclined surfaces, round surfaces, shallow drilling and eccentric drilling etc.
- **Cutting material: solid carbide, EgiAs-coating**
- Outstanding wear resistance thanks to new EgiAs coating
- **Reduced cutting forces thanks to innovative cutting edge geometry**
- Large chip space and adapted point thinning

Long version available on request

**ATORN® Solid carbide flat drill FLAT 3D with internal cooling**

VHM    Werks-norm    Typ N    180°    30°    3xD    DIN 6535 HA    TiAlN    *i* Vc/fz    378

- For producing flat-bottomed holes in one single operation
- Facilitates drilling in a single operation on inclined surfaces
- Improved drilling quality with special cutting and 4-guide chamfer geometry
- Better self-centring

Multifunctional ...

... with indexable insert.

**ATORN**<sup>®</sup>  
Performance demands quality

**ATORN® Solid carbide high-performance drill bit HIGH FEED 5D**

**NEW**

- 3-edged drill for high feed rate
- Cutting material: Ultra micro-grain SC TiAlNplus
- special HFD point thinning reduces cutting forces and generates short chip breaking
- large chip spaces allow good chip removal
- optimum centring characteristics

*for high feed rate*

### ATORN® Solid carbide drill, 3-edged

VHM
DIN 6539
Typ N
150°
28°
5xD
Z 3
TiN
i Vc/fz 380

- 3 cutting edges, with wider flutes
- **For precisely positioned and shaped bores in solid material**
- Very good self-centring
- Very good bore surfaces

3 cutting edges

## ATORN® Solid carbide drill reamers

VHM Werks-norm Typ N 140° 30° 5xD DIN 6535 HA Z 2 TiAlN Vc/fz 380

Drilling and reaming in one work step

- Drilling and reaming in one operation
- Reduced machining and auxiliary processing times
- Production of bores in **tolerance zone H7**
- 2 boring inserts and 4 reaming inserts for high surface quality, dimensional stability and true-running accuracy

## ATORN® Solid carbide short step drill bit

- Ø tolerance h8
- **Cutting material: solid carbide, TiAlN-coated**
- For economical bore and countersink production in one operation
- Tight concentricity tolerance for precise alignment
- **Especially suitable for NC machines and automatic units**
- **Note:** The cutting speed is determined by the large diameter, while the feed rate is determined by the small diameter

## ATORN® Multifunction tool for indexable cutting inserts

4 effective cutting edges per indexable insert

NEW

- Surface-hardened carrier tool
- **For centring, NC drilling, milling and V-groove milling**
- Cost-efficient thanks to 4 useable cutting edges per indexable insert
- **Improved process reliability due to the special installation position of the SEEX**
- Tightening torque for clamping screw M4 = 5.2 Nm

### individual

## ATORN® ETD 840 indexable insert drill bit

- Drilling in the 8.0 - 40.0 mm diameter range
- Innovative cutting edge geometry
- Up to 10xD and Ø 50 mm available on request
- Made from high-strength, heat-resistant powdered metal
- Polished chip chambers for low-vibration, reliable chip removal
- **Indexable inserts available from the manufacturer in 0.1 mm diameter increments**
- High bore surface quality and precision
- **Coated bodies for increased wear-resistance available on request**

# ATORN® ETD 840 indexable inserts

- innovative, efficient cutting edge geometry
- Precision-ground
- Adapted to tool holder
- Excellent wear-resistance and cutting properties
- All intermediate dimensions available in 0.1 mm increments

Deep drilling ...

... with brainpower.

**ATORN®**  
Performance demands quality

## Replaceable head drill PXD

390

- Drilling in diameter range 14 - 25.4mm
- special cutting geometry for larger diameters
- internal coolant supply
- **bayonet system for safe and fast boring head change**
- high bore surface quality and precision
- polished chip chambers for low-vibration and reliable chip removal
- **Supplied with chuck key**

### PXD-3D

## Modular drilling systems

**INFO**

Modular drills from Allied Machine & Engineering Co. (AMEC) meet the increasing demands of customers from various industries. Solutions are provided not only for general mechanical engineering, but also for the automotive sector and aerospace technology. The flexible drill systems are characterised by their universal application capabilities and in particular by the combination of cutting materials, coatings and geometries.

### Guaranteed application

Describe your machining problem to us. Working with the manufacturer, we will draw up a quotation for you for the use of appropriate tools. Allied Machine Engineering Co. guarantees the feasibility of the project.

### T-A<sup>®</sup> Pro

- Diameter range 11.10 to 47.80 mm
- Geometries and basic materials for machining steel, cast iron and non-ferrous metals
- Material-specific geometries in accordance with ISO for simplified tool selection
- New support and coolant bore design for improved chip removal
- Drill depths up to 15 x D

### GEN2 T-A<sup>®</sup> and T-A<sup>®</sup> Original

- Diameter range 9.50 - 160.00 mm
- Various geometries, base substrates and coatings available
- Exchangeable cutting inserts reduce regrinding work
- 1.5 x D to 32 x D in the AMEC standard range

You can find the entire range in the Allied Maxcut special catalogue. Request your free copy now!

# Series Z Drilling system T-A Pro™

- Series Z, diameter range 11.20 - 12.60 mm
- Drilling depths up to 15 x D
- Supports with innovative coolant bore system for higher flow rate
- Cutting fluid is fed directly under the chip and creates a "hydraulic wedge"
- Sturdy support and new chip flute design for safe chip removal
- **3 material-specific geometries available**
- Wide range of applications in the ISO material groups P, M, K and N

# Series 1 Drilling system T-A Pro™

- Series 1, diameter range 17.70 - 24.30 mm
- Drilling depths up to 15 x D
- Supports with innovative coolant bore system for higher flow rate
- Cutting fluid is fed directly under the chip and creates a "hydraulic wedge"
- Sturdy support and new chip flute design for safe chip removal
- 3 material-specific geometries available
- Wide range of applications in the ISO material groups P, M, K and N

# IMB Cutting inserts T-A® Original

HSS
TiN
TiCN
**i** Vc/tz 385

- Diameter 9.5 - 65mm
- suitable for carrier tools T-A® Original, series Y to 4
- **Cutting material: HSS Super Cobalt, TiN/TiCN-coated**
- Universal geometry with a wide range of applications
- **Recommendation:** TiCN variant for applications in stainless steel

# IM Cutting inserts T-A® Original Flat Bottom 180°

HSS
TiN
*i* Vc/fz 385

- Diameter 9.5-65 mm
- For producing a flat-bottomed bore in existing bore
- Suitable for carrier tools T-A® Original, series Y to 4
- Also suitable for flat countersinks (only with short holder)
- Cutting material: HSS Super Cobalt, TiN-coated

# Indexable inserts solid drill bits PHOENIX PD

- Optimised substrate geometry for increased stability, improved chip removal and reduced cutting forces
- Available in tool lengths of 2xD, 3xD, 4xD and 5xD
- Diameter 12-63mm
- Wide range of applications in steel, stainless steel, cast iron and aluminium materials
- Short chips due to additional chip breaker in the chip flute
- High efficiency thanks to 4 effective cutting edges per indexable insert
- Same indexable insert can be used as centre and periphery plate
- With internal coolant supply
- Please note: Supplied without chuck key (Torx-Plus), please order separately!

Range expanded

**palbit**  **Indexable inserts - solid drill bits SCS 3D/4D**

- Surface-hardened carrier tools
- **Available tool lengths of 3xD and 4xD**
- **Diameter 13-50 mm**
- Optimised chip space geometry and cutting edge positions for stable drilling
- Wide range of applications
- Good chip control and reduced cutting forces
- **With internal coolant supply**
- **Suitable indexable cutting inserts SPKX**

**SCS 3D - 3xD**

- Bore tolerances:  $\varnothing$  13-21.5 mm > -0.1/+0.15 mm;  $\varnothing$  22-50 mm > -0.12/+0.2 mm

## palbit Indexable inserts - solid drill bits with cartridge system SCC 3D/4D

- Surface-hardened carrier tools
- **Available tool lengths of 3xD and 4xD**
- **Diameter 50-80 mm**
- Optimised chip space geometry and cutting edge positions for stable drilling
- Wide range of applications
- Good chip control and reduced cutting forces
- **Suitable indexable cutting inserts SPKX**
- Supplied with inner and outer cartridge

**palbit** Indexable cutting inserts SPKX

- Carbide indexable cutting inserts, positive 11°
- **PH6920** PVD-coated (TiAlN)  
Fine grain carbide for universal applications, good toughness and wear resistance
- **PH6930** PVD-coated (TiAlN)  
Superfine grain carbide for applications under unstable machine conditions at moderate cutting speeds
- **PHC930** PVD-coated (TiAlN+TiN)  
Fine grain carbide for universal applications at high cutting speeds

Precision ...

... but digital.

**ATORN**  
Performance demands quality

**palbit**  Indexable inserts - solid drill bits TDS 3D

- Surface-hardened carrier tools
- **Drilling depths up to 3xD**
- **Diameter 13-58 mm**
- Soft cutting for lower power requirement
- Optimised chip space geometry and cutting edge positions for stable drilling
- Wide range of applications in structural steel and stainless steels
- Good chip control and reduced cutting forces
- **With internal coolant supply**
- Bore tolerances:  
 $\varnothing 13-21.5 \text{ mm} > -0.1/+0.15 \text{ mm}$ ;  $\varnothing 22-50 \text{ mm} > -0.12/+0.2 \text{ mm}$ ;  $\varnothing 50-58 \text{ mm} > -0.15/+0.25 \text{ mm}$

**palbit**  Indexable inserts - solid drill bits with cartridge system TDC 3D

- Surface-hardened carrier tools
- **Drilling depths up to 3xD**
- **Diameter 59-80 mm**
- Soft cutting for lower power requirement
- Wide range of applications in structural steel and stainless steels
- Good chip control and reduced cutting forces
- **With internal coolant supply**
- **Suitable indexable cutting inserts WCKX**
- Supplied with inner and outer cartridge

**palbit** Indexable cutting inserts WCKX

- Carbide indexable cutting inserts, positive 7°
- **PH6920** - PVD-coated (TiAlN) fine grain carbide for universal applications. Good toughness and wear resistance.
- **PH6930** - PVD-coated (TiAlN) superfine grain carbide for applications under unstable machine conditions at average cutting speeds.
- **Recommendation:** Chip breaker LC specially designed for machining low-carbon steels

**palbit** Indexable inserts drilling system VORTEX DRILL

- **Machining of bore holes from Ø 45 to 180 mm**
- Drilling in a single work step without centring and pre-drilling
- The modular design allows efficient use through possible diameter bridging of up to 10 mm.
- Variable drilling depths of up to 10 x D due to holder system with pluggable extensions
- **Internal coolant supply**
- **Suitable indexable cutting inserts WCKX**
- Supplied with inner and outer cartridge

**Boring head MDO 10D**

# SARA® SARADRILL solid drilling tool

HSS-E-PM
15xD
TiN
Vc/fz
389

- **Machining of bore holes from Ø 49 to 270 mm**
- **For machines with low drive power**
- Low-vibration, equipment-friendly machining with up to 50 % less drive power
- Drilling in a single operation without centring and pre-drilling
- No front face planing required
- Cost-efficient boring system, since differences in diameter of up to 30 mm can be machined with one boring head by changing the cutting edges
- Variable drilling depths of up to 15 x D due to holding fixture system with pluggable extensions
- Internal coolant supply directly to the cutting edge, no high-pressure pump required
- For rotating tools, the coolant is supplied via a coolant ring
- Short chips due to chip-separating grooves in the roughing blade, no chip removal, even with extremely deep bores
- Also for use on vertically operating machines
- Low tool costs as wear is limited to the cutting edges and centre bit
- Unproblematic regrinding of the centre bit and the cutting edges (in pairs) using the grinding fixture or the tool grinding machine
- **Cutting material:**  
Cutting edge **HSS-E-PM ASP30, ASP30 TiN**  
**HSS** centre bit
- For use on all machine tools as a rotating or stationary tool especially for machining large bore diameters on machines with low drive power
- **Caution:** Not suitable for boring out existing holes!

**Drilling with 100 mm diameter into solid material with just 5 KW of drive power?****Use SARADRILL of course****Working example of a user of SARADrill**

Workpiece: Compression cylinder  
 Material: 1.7225, 42CrMo4V  
 Hole: Diameter 100 mm, depth 200 mm  
 Machine: Milling machine  
 Feed rate f: 0.18 mm/rev  
 Cutting speed Vc: 18 m/min

**Drive power: approx. 4.5 KW****Result: 65% savings in working time**

**SARADRILL cutting edge**

- For SARADRILL solid drilling tools
- The cutting edges are delivered in pairs, i.e. 1 roughing blade and 1 finishing blade.
- **Note for machining blind holes:**  
The finishing blade can be adjusted from 3 to 10 mm, depending on the size of the drill head, to machine intermediate dimensions. (Not permissible for machining through-holes!)
- **Caution: The cutting edges may only be replaced in pairs to prevent the risk of breakage!**
- Prices per pair (1 roughing blade and 1 finishing blade)

# ATORN® Universal Drilling and Turning Tool

- with internal cooling
- series and single-item production for facing and longitudinal turning, drilling, countersinking and chamfering
- Optimises process costs: up to 30% reduced tooling times
- Solves the problem of tool location shortages
- wide range of holders and indexable inserts for a variety of materials
- Minimises tool costs: **one tool for 5 machining methods**

- Solid carbide indexable cutting inserts **WCHX** for facing and longitudinal turning, drilling, countersinking and chamfering
- **HW7310** uncoated  
innovative cutting edge geometry with extremely sharp cutting edges for reliable machining of non-ferrous metals  
very hard substrate for long service lives  
very good chip breaking thanks to chip breaker
- **HC7625** coated (TiN)  
universal and reliable use in steel and stainless steel  
excellent combination of wear resistance and toughness
- **HC7535** coated (TiAlN)  
universal and reliable use in steel and stainless steel with increased impact loads  
optimised for machining in unfavourable cutting conditions

# SARA® SARAcut 2.0 drilling and turning tool

- **Drilling and turning with one tool**
- **Multifunctional:**
  - Solid drilling with a level-bottomed drill hole (Drawing 1)
  - Turning internal contours (Drawing 2)
  - Turning of flat contours (Drawing 3)
  - Turning external contours (Drawing 4)
  - (Note change of rotational direction)
- Reduced storage of tools and indexable inserts, as well as reduced tooling times
- Reduction of tool costs
- Reduced programming effort and expense
- **Solves the problem of tool location shortages**

**Range expanded**

## ATORN® Core and countersink drill

- **With internal cooling**
- For countersinking and drilling
- Counterbores for producing countersinks for cylinder head screws, countersinks, sealing surfaces
- Fixed dimension spiral countersink for drilling pre-machined or cast bores
- **The diameter to be drilled must not be smaller than dimension A!**
- **Bore tolerances:** For countersinks according to DIN 74 (H13)
- For ISO indexable inserts, please refer to the "Turning" section

## ATORN® 180° reverse countersink

- For rotating use with stationary workpieces
- **For ISO indexable cutting inserts (CPMT or CCM and CCG)**
- With internal cooling, (Ø15 and Ø18 without internal cooling)
- Straight shank with clamping surface (Whistle notch)
- D5 = maximum countersink diameter

1. Positioning: pay attention to the cutting edge position!
2. Move from the centre to the cutting edge opposite "E".
3. Move eccentrically through the bore.
4. Move back to the centre.
5. Reverse countersink with speed "N" and feed "F".
6. Move from the centre to the cutting edge opposite "E" and retract from the hole.

### ATORN® The ISO colour ring system

ATORN taps and thread formers are marked with coloured rings in accordance with the ISO colour code according to their **main area of use**. The respective secondary applications are specified in the catalogue.

<b>Steel up to 1,000 N/mm<sup>2</sup></b>
<b>Stainless steel</b>
<b>GG, GGG</b>
<b>Aluminium and copper alloys, long-chipping materials</b>
<b>Titanium and nickel alloys</b>
<b>Hard steel up to 62 HRc</b>
<b>Steel up to 1,400 N/mm<sup>2</sup></b>
<b>Steel Stainless steel</b>

# ATORN® Universal machine taps

- ISO 6H metric thread
- Type C, 2 to 3-thread chamfer, for blind-hole threads
- DIN 371 construction dimensions = up to M10, DIN 376 = from M12
- **Cutting material: HSS-E, vapour-treated; HSS-E, TiN-coated**
- Possible thread depth 2.5 x D
- **for universal applications**

## ATORN® Universal machine tap ULTRA-HL

- **ISO 6H metric thread**
- 40°, spiral-fluted
- Type C, 2-3 thread chamfer
- DIN 371 construction dimensions = up to M10, DIN 376 = from M12
- **Cutting material HSS-E, HSS-E-PM, Hardlube coating**
- Easy chip removal to the rear
- Possible thread depth 2xD
- **BALINIT® HARDLUBE:** The high level of hardness and temperature resistance of the TiAlN layer effectively protects cutting edges from wear, while the excellent sliding and lubricating properties of the WC/C ensure smooth chip flow. The result: Greater production reliability thanks to reliable, reproducible performance.

- ISO 6H metric thread
- 40°, spiral-fluted
- Type C, 2-3 thread chamfer
- DIN 371 construction dimensions = up to M10, DIN 376 = from M12
- **Cutting material: HSS-E; HSS-E TiN; HSS-E TiCN**
- For blind-hole threads
- Strong chip removal to the rear for long-chipping materials
- Minimal thread relief grinding
- Possible thread depth 2.5 x D

**Up to 1000 N/mm<sup>2</sup>**

## ATORN® Machine tap set

- In a plastic case
- **HSS-E tap for ISO 6H metric thread**
- 40°, spiral-fluted
- Type C, 2-3 thread chamfer
- DIN 371 construction dimensions = up to M10, DIN 376 = from M12
- For blind-hole threads
- Strong chip removal to the rear for long-chipping materials
- Minimal thread relief grinding
- Possible thread depth 2.5 x D
- **HSS-E twist drill bit, type TLP**
- 130° point angle

**Including tapping hole drill bit**

### ATORN® Machine tap

M 60° HSS-E PM DIN 371 DIN 376 ISO 2 6H 3,5-5 3xD TiCN Vc/tz 407

- ISO 6H metric thread
- Straight-fluted with spiral point
- Type B, 3,5-5 thread chamfer
- DIN 371 construction dimensions = up to M10, DIN 376 = from M12
- **Cutting material: HSS-E-PM, TiCN-coated**
- For through-hole threads
- Possible thread depth 3 x D

**Ideal for steel and stainless steel**

## ATORN® Machine tap

- ISO 6H fine-pitch metric thread
- 40°, spiral-fluted
- Type C, 2-3 thread chamfer
- **Cutting material: HSS-E, vapour-treated; HSS-E, TiN-coated**
- For blind-hole threads
- Strong chip removal to the rear
- Minimal thread relief grinding
- Possible thread depth 3 x D

Up to 1000 N/mm²

# ATORN® Machine tap

- **Metric ISO 6H fine thread**
- Straight-fluted with spiral point, Form B, 3.5 to 5-thread chamfer
- **Cutting material: HSS-E; HSS-E, TiN-coated**
- For through-hole threads
- The spiral point ensures strong chip removal to the front

**Up to 1000 N/mm<sup>2</sup>**

## ATORN® Machine tap, weak-spiralled

- Whitworth pipe thread, 55°
- 15°, right-hand, spiral-fluted
- Form C, 2-3 thread chamfer
- **Cutting material: HSS-E**
- For blind-hole threads
- Easy chip removal to the rear
- Possible thread depth 1.5 x D
- Suitable for conventional machining with quick-action chuck
- **Note:** for DIN-ISO 228/1 straight pipe threads

Up to 1000 N/mm<sup>2</sup>

## ATORN® Universal machine taps

- **UNF thread, unified national standard fine-pitch thread**
- Form B, 3.5-5 thread chamfer
- Straight-fluted with spiral point
- **Cutting material: HSS-E, vapour-treated**
- The spiral point ensures strong chip removal to the front
- Possible thread depth 2 x D
- **For universal applications**

## ATORN® Machine forming taps, long

- **Metric ISO 6HX thread**
- Form C, 2-3 thread chamfer
- With oil grooves
- **Cutting material: HSS-E-PM, TiN**
- For blind-hole and through-hole threads
- **Extra-long range to bridge protruding contours**
- With axial coolant bore outlet
- Possible thread depth 2 x D
- **With internal coolant supply from M6**
- **Also available in metric fine (MF) version**

**Long version**

## THERMDRILL® Thermal drill bits (flow drill)

For a lower wall thickness, often only 1-2 threads can be inserted. These are generally not sufficient for a load-bearing thread. With the THERMDRILL process, you can create extremely stable thread bushes in seconds in only two steps. Protected against rotation and resistant to vibrations. Ideal for thin-walled sheet steel, pipes and profiles as the thread bushes are produced as if from one cast.

- **Wobbling, loosening or rotating (as with rivet nuts) no longer possible**
- Additional inserts no longer required
- **Especially suitable for round tubes**
- **Secure hold even in sheet metal and hollow profiles**
- No waste, chip-free process by using friction heat
- Better quality thread due to shaped instead of cut thread (material reinforcement)
- **Long service life of tools thanks to polygon-ground solid carbide**

### Basic equipment

- Incl. ER32 - Ø 6, 8 and 10 mm collets

Holding fixtures	Contents	art.no.	€

# HELICOIL plus thread repair kits

- Contents for each coil thread:
- **HELICOIL plus** thread inserts in three lengths (1xD, 1.5xD and 2xD)
- Twist drill bits, hand taps made from HSS, installation mandrels and tang breakers **up to M12**
- From M3 to M6, 60 **HELICOIL** inserts in a repair pack, in 3 lengths (20 of each)
- From M8 to M16, 30 **HELICOIL** inserts in a repair pack, in 3 lengths (10 of each)

## ATORN® Threading die in one size

M
60°
HSS
HSS-E
Werks-norm
DIN 13 6g
Vap.
i Vc/fz
408

- Threading dies 25 x 9 mm
- For DIN 13 metric ISO thread
- Two-sided spiral point for good chip removal
- Larger chamfer diameter, chamfering of the bolt not necessary
- Thread lapped for smoother, burr-free cutting edges
- **Cutting material: HSS and HSS-E, vapour-treated**
- Increased surface hardness (nitriding process)
- Particularly suitable for mechanical applications due to the one-size-fits-all design

**Suitable for threading die holder 25 x 9 mm**

material	● very well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper Cu-alloy	graphite GRP/EPF/thermo	hardened steel

## SARA® Machine tap extensions

- **Threading in workpieces with extremely deep female threads or for threading directly along cast walls, edges, interfering edges of equipment etc.**
- The front end of the extension is designed as a collet. Tightening a knurled clamping nut will clamp the collet and/or the tap. Torque is transferred via the square end. The rear end of the extension is DIN-compliant so that the tap extensions can be clamped in quick-change inserts just like taps or other thread-cutting equipment.
- **Special dimensions available on request**
- For use on CNC machines and traditional threading attachments
- No cost-intensive taps with special lengths
- No spare parts required
- The extension and standard tap combination is precise and easy to handle

## ATORN® Threading die holder

**NEW**
**DIN  
22568**

- For threading dies in accordance with DIN EN 22568 (DIN 225)
- **Tool body made of fine die-cast zinc in accordance with DIN 1743**
- Four attachment screws for small diameters, five screws for larger diameters
- Burnished attachment screws with a 90° pointed tip, for centring in the threading die
- Handles refined by burnishing-nitriding process with fine knurling for increased grip
- **Revised support structure for increased load capacity**

## ATORN® Taper and deburring countersinks

VHM Werks-norm 60° Z 3 *i* Vc/tz 413

- 3 cutting edges, radially relief-ground
- Shank tolerance h9
- Straight shank
- **Cutting material: solid carbide**
- Design: Ø 8 mm in solid carbide, Ø 10 - 25 mm solid carbide head and soldered shank
- We recommend the carbide version for machining solid steels.

**Smooth countersinks, high endurance**

**SARA® ADVANCED taper and deburring countersinks**

HSS
DIN 335C
90°
Z 3
TiN
Vc/fz
412

**Patented shank and irregular pitch**

- 3 cutting edges
- **HSS and HSS TiN cutting material**
- New cutting edge geometry prevents uneven wear of the cutting edges
- High degree of wear resistance and hot hardness for maximum service life
- High true running accuracy with considerably reduced force application
- **Patented shank to stop rotation of the countersink in the drill chuck with optimum torque transfer** (from Ø 8.3 mm)

**GRANLUND Tools** **Combination counterbores**

HSS Werks-norm 22° Z 4

- Just 3 holder sizes required to cover a countersink range of 7 - 66 mm (on request up to 84 mm).
- Any countersink and pilot pin combination possible within the same holder size.
- Tight bore and shank tolerances ensure a high degree of true-running accuracy.
- Countersink and pin are fastened quickly and securely with just one screw. An additional stud safety catch prevents countersinks from twisting.
- Combine elements to produce countersinks for DIN screws and to machine stepped bores or non-standard countersinks
- 4 cutting edges

## ATORN® Hand reamers

- **Type B for H7 fit**
- Right-hand cutting, manufacturing tolerances in accordance with DIN 1420
- Spiral-fluted, long chamfer along 1/4 of the cutting edge length
- Even ridge count with irregular pitch for chatter-free bore reaming
- Straight shank and square end
- **Cutting material: HSS**
- For reaming through-holes

## ATORN® Quick-adjustment hand reamers

- Right-hand cutting, 4 cutting edges
- Straight shank and square end
- Large adjusting range, fine adjustment with ring gauges or micrometre
- **Cutting material: HSS**
- For repair work that does not require narrow fit tolerances, and for intermediate dimensions

# ATORN® Hand taper reamers

- 1:50 taper for taper pins
- **Type A**, straight-fluted
- **Type B**, spiral-fluted, 6° left-hand twist
- Shank design: straight with square end
- For taper pins in accordance with DIN EN 22339, DIN 258, DIN EN 28737 and DIN EN 28736
- For output bores, we recommend conical pin-hole drill bit no. 101025....
- Ø 13 mm and Ø 14 mm, non-DIN
- \* These dimensions are not included in the standard

## ATORN® High helix taper reamers

HSS-E
DIN 2179
1:50
45°
i
Vc/fz
413

- Taper 1:50 for taper pins
- Shank design: straight with driving pin lugs in accordance with DIN 1809
- For taper pins in accordance with DIN EN 22339, DIN 258, DIN EN 28737 and DIN EN 28736
- Spiral-fluted, 45° left-hand twist
- For through-holes
- For output bores, we recommend the conical drill bit for pin holes No. 101025....
- Requires extensive chip removal (do not pre-drill too deep)
- **Cutting material: HSS-E**
- Ø 6.5, 13, 14, 16 and Ø 20 mm, non-DIN

## SARA® Taper bridge reamers

- Right-hand cutting
- Cutting edge lengths 1/3 tapered, 2/3 straight
- Shank design: MT
- Spiral-fluted, 25° left-hand twist
- **Cutting material: HSS**
- Used for reaming bores that are too small or offset

# ATORN® NC machine reamers

HSS-E
DIN 212
Werks-norm
H7
9°
Vc/tz
414

- For H7 fit
- Right-hand cutting
- **Cutting material: HSS-E**
- Straight shank without square end
- Form D: spiral-fluted with offset shank
- **To ensure maximum true running accuracy for use in hydraulic expansion chucks** and high-precision chucks, these reamers are delivered with **even shank diameters** suitable
- for reaming through-holes and blind holes
- **Also available in TiN-coated version**

## ATORN® High helix machine reamers

**HSS-E** **DIN 212** **H7** **45°** **Vc/fz** **414**

- For **H7 fit**
- Right-hand cutting
- 45° left-hand twist, type E
- Straight shank
- With tapered chamfer along approx. 1/6 of the cutting edge length
- For **through-holes**
- Clean, chatter-free surface
- Broad chip spaces for high cutting speeds and up to 100 % higher feed rates
- **Cutting material: HSS-E**

material	● very well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper Cu-alloy	graphite	hardened steel

# BECK High-performance reamers HNC ecoSpeed

HSS-E
Werks-norm
H7
DIN 6335 HA
TiAlN
i Vc/tz
416

- Diameter 6-40 mm
- Manufacturing tolerances H7
- Cutting material: HSS, TiAlN-coated
- NC shank for use directly in hydraulic expansion chucks and high-precision collet chucks
- Tight h6 tool shank tolerance for a high level of true running accuracy
- With internal coolant supply:
  - Straight-fluted version, coolant discharged on the face side, for blind holes
  - Straight-fluted version, coolant discharged on the cutting edges, for blind holes

**With internal cooling**

# ATORN® Machine reamer with MT shank

HSS-E
DIN 208
Werks-norm
H7
9°
10°
Vc/fz
414

- **Type B for H7 fit**
- Right-hand cutting
- **Morse taper**
- Spiral-fluted, short 45° chamfer
- Even ridge count with irregular pitch for chatter-free bore reaming
- **Cutting material: HSS-E**
- For reaming through-holes, chip removal in the cutting direction, suitable for blind bores due to short chamfer

## ATORN® Machine reamers

VHM Werks-norm H7 9°   414

- sim. to DIN 212/8093 for H7 fit
- Straight shank, from Ø 10.0 mm steel shank with inner centring in accordance with DIN 332 Type B
- Left-hand twist, type B, 45° chamfer
- Up to Ø 2.6 mm with external line-up clamp, from Ø 2.7 mm with inner centring
- Cutting material: solid carbide K10
- For reaming cast iron, white iron, malleable cast iron, cast steel, steel, non-ferrous metal and plastics
- For through-holes

## ATORN® NC machine reamers

VHM DIN 212 H7 9°   414

- Similar to DIN 212/8093
- For H7 fit
- NC shank for use in hydraulic expansion chucks and high-precision collet chucks
- Form D
- Straight shank, spiral-fluted, right-hand cutting
- Up to Ø 13.0 mm solid carbide, from Ø 14 mm with steel shank
- For reaming through-holes
- Also suitable for blind bores

material	● very well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper	graphite	hardened steel

## SARA® 1/100 solid carbide machine reamers

- sim. to DIN 212
- Type B, type D from Ø 3.76 mm
- 10° left-hand twist, right-hand cutting, straight shank
- 1/100 pitch
- Tolerances:
  - Ø 0.60 to 3.00 mm +0/+ 0.003
  - Ø 3.01 to 6.00 mm +0/+ 0.004
  - Ø 6.01 to 13.05 mm +0/+ 0.005
- Cutting material: solid carbide K15F (Ø > 13.97 with carbide head)
- For through-holes

## SARA® Solid carbide high-performance reamers

VHM
Werks-norm
H7
10°
DIN 6535 HA
TiAlN
i Vc/fz
416

- **Manufacturing tolerances: H7 in accordance with DIN 1420**
- Right-hand cutting, **with internal cooling**
- **Cutting material: solid carbide, TiAlN-coated**
- NC shank for use directly in hydraulic expansion chucks and high-precision collet chucks
- Tight h6 tool shank tolerance for a high level of true running accuracy
- Version with linear flutes, coolant exits on the face side, for blind holes
- Version with 10° left-hand twist, lateral coolant outlet on the cutting edges, for through-holes
- **Other versions for machining stainless steels, aluminium, copper, zinc and Cu/Zn/Mg alloys, as well as hardened steels up to 65 HRC available on request**

# ATORN® High-performance exchangeable head reamers

- Modular reaming tool system
- **Diameter 10-40 mm**
- **For through-holes and blind bores**
- **Cutting material: solid carbide, TiAlN-coated**
- **With internal coolant supply**
- Particularly efficient from machining diameters of 20 mm
- Flexible machining depths thanks to various holder lengths
- Faster and more secure tool changes without new tool calibration
- **2 geometries available:**  
ST - for steel and cast iron (ISO P, K)  
VA - for stainless steels (ISO M)
- **Other designs for the efficient machining of aluminium, titanium, CFRP/GFRP, and hardened materials available on request**

**Modular system**

## D'ANDREA® MHD modular tool system

- Modular tool holder system for **line boring, milling, drilling, thread cutting**
- Rigid high-precision system, developed and manufactured with state-of-the-art design engineering and production resources based on decades of experience
- A system of extreme flexibility and simplicity for machine tools, machining centres and flexible production facilities.
- For machining with very strict tolerances with a high-grade surface finish
- Patented cylindrical/conical coupling and radial expansion bolts to ensure maximum rigidity and concentricity during boring and milling work
- Internal coolant supply in all elements
- Available in eight sizes, which allows full interchangeability

Type	D1	M1	S	Nm
MHD`16	16	10	2.5	2 - 2.5
MHD`20	20	13	3	4 - 4.5
MHD`25	25	16	3	6.5 - 7.5

MHD`63	63	42	8	70 - 80
MHD`80	80	42	8	70 - 80

## D'ANDREA® MHD base holding fixtures

- **Case-hardened steel, hardened and ground to tolerance AT3.**
- ISO 40 taper recommended exclusively for sizes MHD-50 and MHD-63
- For heavy milling work and bores with a depth of more than 250 mm and greater than 125 mm in Ø, an MHD-80 base holding fixture should be used.
- Base holding fixtures in special designs or with **planar support** are available **on request**.

## D'ANDREA® MHD reducers RD

- Reducers permit the use of elements for smaller MHD sizes.
- This makes the MHD system even more flexible.
- Greater rigidity is achieved by using smaller MHD tools in larger holding fixtures.

## D'ANDREA® MHD micrometric boring bar system

- TRM boring heads and micrometric boring bars ensure a tolerance of IT6 with an optimum surface finish quality.
- Settings with a radial correction of 1 µm can easily be read off the Vernier scale and executed directly on the machine.

### TRM 50/50 high-precision boring head, Ø 6 - 84 mm

**osborn Novoflex-B honing tool**

- Robust, self-centring honing tool for smooth grinding processes
- Flexible brush design ensures ideal adjustment of the abrasive balls to the surface
- For chamfering and finishing
- Can also be used in non-circular bores
- For use on hand-held drills, honing machines and automatic machines
- For a uniform, fine-ground surface
- Silicon carbide, SiC
- Recommended speed: 350 to 700 rpm

**Only for use with  
oil or emulsion**

## osborn Cylindrical tube brush with grinding bristles

- For internal machining of bores and finishing non-ferrous metals, steel and cast-iron parts
- Silicon carbide, SiC
- Particularly suitable for deburring transverse bores, control components, O-ring recesses and straight bores
- We recommend bristles that are 10 - 15 % wider than the bore
- For cleaning, smoothing, deburring
- Unit prices when purchased in packs

## osborn HELITUF® interior brush

- Particularly suitable for cleaning and deburring threaded bores
- Also for brushing edges and longitudinal recesses e.g. for keyways
- Twist-fastened, crimped genuine OSBORN wire, Ø 0.13 mm
- **HELITUF®** brushes are very dense internal brushes for mechanical and manual use
- For cleaning, deburring, brushing
- Unit prices when purchased in packs

### Individual

- Dimension D refers to the bore diameter

D mm	A mm	L mm	D1 mm	art.no.	€
8	25	89	approx. 3.18	626001 0008	5,60
10	25	89	approx. 3.18	626001 0010	5,95

**HSS cutting inserts, Series Y to 2**

- Please adjust these guideline values according to manufacturer specifications, clamping operation and machine set-up!
- As starting values, we recommend reducing the specified cutting data by 20%.
- **Note:** The recommended cutting speeds for AM200-coated cutting inserts are based on a rule of thumb of data and apply under optimum conditions. In many applications the optimum conditions are not present. Thus it is necessary to adapt the cutting speed to the respective circumstances. We are happy to provide technical support for your specific application.

**MEC Machining notes drilling system T-A®**

- Please adjust these guideline values according to clamping operation and machine set-up!
- **Note:** Tool breakage can cause serious damage. Without support bushings, please pre-drill a pilot bore 2-3xD deep with a short holder. The rotational speed of the tool outside the component may not exceed 50 rpm.

<p><b>1. Pilot bore</b> 100 % rpm 100 % mm/rev</p>	<p>Pre-drill a pilot bore of at least 2xD deep using the AMEC® pilot drill bit. Use a short AMEC® pilot drill bit with an equal or greater point angle.</p> 	<p>With cooling</p> 
<p><b>2. Insert the deep-hole drill bit into the pilot bore</b> 50 rpm max 300 mm/min</p>	<p>Position the AMEC® deep-hole drill bit up to 1.5 mm from the root of the pilot bore with max. 50 rpm (clockwise rotation) and with a feed of 300 mm/min.</p> 	<p>Without cooling</p> 
<p><b>3. Deep-hole drilling - Between-drilling</b> 50 % rpm 75 % mm/rev</p>	<p>Drill 1xD beyond the root of the pilot bore. Reduce cutting speed by 50 % and reduce feed by 25 %. At least 1 seconds' dwell time is required prior to further machining to reach full speed (prevents vibration).</p> 	<p>With cooling</p> 
<p><b>4. Deep-hole drilling bit - Blind hole</b> 100 % rpm 100 % mm/rev</p>	<p>Drill to the full depth using the recommended cutting data. <b>Clamping cycles not recommended.</b></p> 	<p>With cooling</p> 
<p><b>5. Deep-hole drilling bit - Through-hole</b> 50 % rpm 75 % mm/rev</p>	<p><b>Only for through-holes:</b> Reduce cutting speed by 50 % and reduce feed by 25 % before exit. Use no more than 3 mm beyond the full diameter.</p> 	<p>With cooling</p> 
<p><b>6. Retracting the drill bit</b> 50 rpm max</p>	<p>Reduction of the rotational speed to <b>max. 50 rpm</b> before the AMEC® drill bit is retracted from the hole.</p> 	<p>Without cooling</p>

Deep drilling ...

... with brainpower.

**ATORN**<sup>®</sup>  
Performance demands quality

Application	Description
<p style="text-align: center;"><b>Drilling on inclined surfaces</b></p> 	<p>Drilling of an inclined surface is possible up to a 30° incline without reducing the cutting parameters. Reduce feed force by 50 % on the incline for angles between 30° and 40°.</p>
<p style="text-align: center;"><b>Interrupted cutting</b></p> 	<p>For reliable drilling, reduce cutting force and feed by 30 % for the greatest possible stability of machine and clamp.</p>
<p style="text-align: center;"><b>Bundled drilling</b></p> 	<p>Series TDS and TDS drill bits are not suitable for this, as they create a disc in the bore diameter when exiting the material which prevents the drilling of subsequent material.</p> <p>Attention: In through-hole drilling these discs also occur upon exit. With a fixed drill bit and rotating workpiece, these can fly out uncontrolled from the workpiece. Please use enclosed machines and wear adequate occupational safety equipment.</p>
<p style="text-align: center;"><b>Drilling</b></p> 	<p>For drilling tasks with TDS and TSC Series, turn the drill bit in the direction of the indexable cutting inserts. Observe the wear on the outer cutting edges, the greater chip volume can shorten the change intervals.</p>

**palbit** Cartridge system

- Diameter adjustment 5 mm
- Loosen clamping screw on the outer cartridge and dismantle cartridge
- Cartridge is shortened on the outer diameter to the desired drill diameter
- Deburr shortened cartridge
- Press cartridge against the contact surface when screwing tight

**palbit** SCS/SCC Indexable inserts solid drill bit

**Cutting data recommendations**

- Please adjust these guideline values according to clamping operation and machine set-up!

... optimal chip control.

**ATORN**<sup>®</sup>  
Performance demands quality

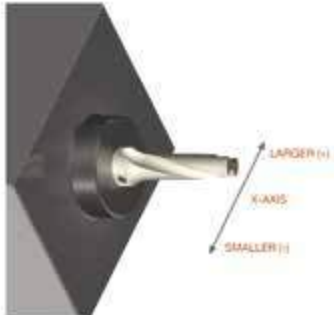

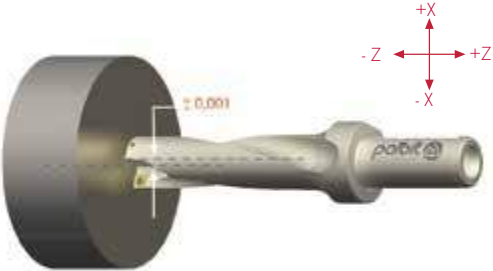

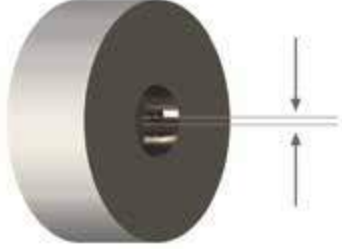

- **Note:** When drilling through-holes, a disc is created when the drill bit exits. With a fixed drill bit and rotating workpiece, these can be forced out. Protect the operator and personnel with adequate occupational safety equipment. When the drill bit exits the material, a small recess is created as the pilot drill bit is no longer in the cut.

Problem	Corrective measures
<p style="text-align: center;"><b>Nicks</b></p> 	<p>Use on lathes:</p> <ul style="list-style-type: none"> <li>• Check machine settings</li> <li>• If the tool clamping cannot be improved, reduce feed by 30 %</li> <li>• If machine or tool clamping is unstable, reduce feed by 30 %</li> </ul> <p><b>Note:</b> Types can be mixed for optimal machining.  <b>Example:</b> PH6930 on inner and PH6920 on outer insert seat</p>
<p style="text-align: center;"><b>Sub-optimal chip removal</b></p> 	<ul style="list-style-type: none"> <li>• Increase pressure and flow of coolant</li> <li>• Increase cutting speed by 20 %</li> </ul>
<p style="text-align: center;"><b>Increased wear</b></p> 	<ul style="list-style-type: none"> <li>• Increase pressure and flow of coolant</li> <li>• Reduce cutting speed by 20 %</li> <li>• Choose a more wear-resistant model</li> </ul>
<p style="text-align: center;"><b>Poor bore quality</b></p> 	<ul style="list-style-type: none"> <li>• Increase pressure and volume of coolant for better chip removal</li> <li>• Increase cutting speed by up to 20 %</li> <li>• Improve workpiece and tool clamping, alternatively reduce feed rate</li> </ul> <p><b>Note:</b> High cutting speeds and low feed rates achieve better surfaces.</p>

**palbit** CUTTING TOOLS SOLUTIONS **Turning work with indexable inserts solid drill bits**

- Notes for use on lathes

Application	Description
<p><b>Axis alignment</b></p> 	<p>The cutting edge of the indexable cutting insert must be parallel to the x-axis of the machine in order to change the bore dimensions by moving the tool. To do this, a surface is applied to the tool shank which runs parallel to the cutting edge. The tool alignment can be oriented towards this.</p>
<p><b>Cutting edge orientation</b></p> 	<p>The outermost cutting edge of the drill bit should be in the (+) direction of the x-axis to allow offset drilling. The inner cutting edge should point towards the operator.</p>
<p><b>Test bore</b></p> 	<p>Please perform a test bore of approx. 5 mm deep to check the setting before producing the finished bore. The setting range is between 0.2 mm and 0.7 mm.</p>

Power requirement

This diagram is based on machining experience of steels with a hardness of 200-250 HB and a cutting speed of 100 m/min

Coolant recommendation

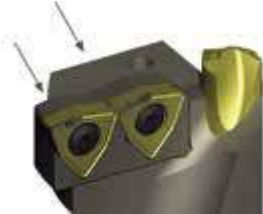

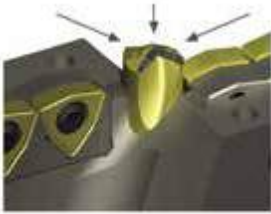

Incorrect	Correct	Description
		<p>No spot drilling is necessary on flat surfaces. For centring holes, the centring drill bit must be smaller than the pilot drill bit.</p>
		<p>Boring into an inclined surface is possible up to an 8° incline. Boring through an inclined surface is possible up to a 4° incline. For greater inclines, the incline and/or uneven surface must be face milled in advance.</p>
		<p>VORTEX drill bits are not recommended for drilling. Use Integrex drill bits for large diameters. Use solid carbide drill bits for small diameters. The solid carbide drill bit is centred using the centring hole of the pilot drill bit.</p>
		<p>VORTEX drill bits are not recommended. Note: Material residues are generated when boring through-holes. With a fixed drill bit and rotating workpiece, the centrifugal force can cause these material residues to fly out uncontrolled from the chuck. Use enclosed machines and wear adequate occupational safety equipment.</p>

**palbit**  **Problem solving VORTEX DRILL**

- **Note:** When drilling through-holes, a disc is created when the drill bit exits. With a fixed drill bit and rotating workpiece, these can be forced out. Protect the operator and personnel with adequate occupational safety equipment. When the drill bit exits the material, a small recess is created as the pilot drill bit is no longer in the cut.

Problem	Corrective measure
<p><b>Nicks on the pilot drill bit</b></p> 	<p>Use on lathes:</p> <ul style="list-style-type: none"> <li>• Check tool centring, realign machine if necessary</li> <li>• Check and/or improve workpiece and tool clamping</li> </ul>
<p><b>Nicks on the indexable cutting insert</b></p> 	<ul style="list-style-type: none"> <li>• Use tougher model</li> <li>• Reduce feed by 20 %</li> <li>• Check and/or improve workpiece and tool clamping</li> </ul>
<p><b>Excessive pilot drill bit wear</b></p> 	<ul style="list-style-type: none"> <li>• Use coated pilot drill bit</li> <li>• Increase pressure and flow of coolant</li> <li>• Reduce cutting speed by 20 %</li> <li>• Choose a more wear-resistant model</li> </ul>
<p><b>Sub-optimal chip breaking</b></p> 	<ul style="list-style-type: none"> <li>• Increase cutting speed by 20 % and reduce feed by 20 %</li> </ul>
<p><b>Sub-optimal chip removal, poor bore quality</b></p> 	<ul style="list-style-type: none"> <li>• Increase pressure and volume of coolant for better chip removal</li> <li>• Increase speed by up to 20 %</li> </ul>

## Repair of damaged or worn thread

### Application

- Thread repair of damage or worn thread
- Thread reinforcement of materials with low shear strength, e.g. aluminium and magnesium alloys
- In mechanical, automotive, electrical and medical engineering

### 1 Drilling

Bore out damaged thread with twist drill bit.

### 2 Inspection

Inspect thread and threaded bolt for even thread and pitch.

### 3 Thread

Cut the holding thread into the bored-out hole using a special coil tap. The use of cutting oil is advisable.

### 4 Install thread insert

Place the insert on the tool and ensure the tang sits in the keyway opening. Correctly adjust using the adjusting ring. Gently screw-in the thread insert in the rotation direction. Do not turn against the running direction; the tang may break.

### 5 Break-off tang

After installation, remove the screwing tool and remove the tang using the tang breaker.

## Solid carbide extractors for extracting damaged taps

### Cutting data and comments

- $V_c = \text{ca. } 20\text{-}25 \text{ m/min.}$
- $f = \text{ca. } 0.01\text{-}0.05 \text{ mm/rev}$
- Please ensure stable clamping!
- Please use high-quality lubricant!
- This tool should not be used to machine soft steels, aluminium alloys or other soft materials.
- The tool should be sharpened from time to time.

1. Position the drill bit on the centre of the damaged tap; please ensure that the workpiece and drill bit are securely clamped. If the head of the damaged tap protrudes from the workpiece, smooth the damaged surface to allow easier boring of the centre of the tap.
2. Perform initial centring at a low feed rate. Then retract the drill bit. Please use a little lubricant for this step.
3. Select the corresponding drill bit. Bore the hole with firm feed/speed. Pause the operation occasionally to remove chips. Please use lubricant of a sufficiently high quality.
4. If the bore is clean, the remaining tap can be easily removed using a scribe or a similar pointed tool; the thread cutting can then be continued.

## Definitions and dimension explanations for threading dies

- D External diameter (n. DIN, tolerance f10)
- E Width
- a Tooth width
- c Groove width
- b Diameter of the bore for retaining screw
- $\alpha$  Rake angle
- $\beta$  Chamfer angle, half countersink angle
- $\gamma$  Spiral point angle

### Threading die tolerances

We supply threading dies for the tolerance class "medium" as standard. Threading dies for other tolerance classes are available on request.

# Tapping holes for taps

• Please adjust these guideline values according to clamping operation and machine set-up!

## Core diameter-tolerance field for thread forming in accordance with DIN 13, Part 50

For strength reasons it is not necessary to maintain the core diameter tolerances of tolerance class 6H; tolerance class 7H satisfies the demand that the flank coverage of bolt and nut thread  $0.32 \times P$  should not be exceeded. Formed threads are normally stronger than cut threads due to the uninterrupted fibre orientation and the work hardening.

**ATORN® Reverse countersink 180°**

• Please adjust these guideline values according to clamping operation and machine set-up!

152501....  
152504....

- For rotating use with stationary workpieces
  - For ISO indexable cutting inserts (CPMT or CCM and CCG)
  - With internal cooling, straight shank with clamping surface (Whistle-Notch)
- Ø15 and Ø 18 without internal cooling
1. Positioning: pay attention to the cutting edge position!
  2. Move from the centre to the cutting edge opposite "E".
  3. Move eccentrically through the bore.

4. Move back to the centre.
5. Reverse countersink with rotational speed "N" and feed "F".
6. Move from the centre to the cutting edge opposite "E" and retract from the hole.

## Undersize for reaming (guide values)

Normally the pre-drilled hole is reamed in one operation, whereby the undersize values specified in the table below are recommended for the use of fixed reamers.

The reaming allowance should be reduced for reamers with slotted bodies or inserted blades.

Pre- and post-reaming is performed for specific hole requirements and with particularly hard materials. Here, the table values below are reamed expediently in two equal parts.

Insufficient chip removal normally results in premature blunting because the teeth no longer cut, but simply press on the bore.

Materials group	Diameter range of the bore in mm				
	3 - 5	5 - 10	10 - 20	20 - 30	Over 30
Machining steel	0.1 - 0.2	0.2	0.2 - 0.3	0.3 - 0.4	0.4-0.5
Structural steel	0.1 - 0.2	0.2	0.2	0.3	0.3 - 0.4
Cast steel	0.1 - 0.2	0.2	0.2	0.2 - 0.3	0.3 - 0.4
Grey cast iron	0.1 - 0.2	0.2	0.2 - 0.3	0.3 - 0.4	0.4-0.5
Malleable cast iron	0.1 - 0.2	0.2	0.3	0.4	0.5
Copper	0.1 - 0.2	0.2 - 0.3	0.3 - 0.4	0.4-0.5	0.5
Copper alloy (bronze, brass)	0.1 - 0.2	0.2	0.2 - 0.3	0.3	0.3 - 0.4

## ATORN® High-performance exchangeable head reamers

The universal exchangeable heads are characterised by a complete and particularly user-friendly range. The joint means the exchangeable heads can be changed quickly and easily, and with high repetition precision. Meanwhile perfect hold with maximum stability and rigidity is achieved. The exchangeable head

is tightened with a defined torque and requires a force-fitting and positive-fitting connection. High true running accuracy in conjunction with excellent rigidity are key features of this system.

Clean the taper, thread and flat surface of the exchangeable head using compressed air and a cloth.

Clean the taper, thread and flat surface of the exchangeable head mount using compressed air and a cloth.

Hand-tighten the exchangeable head clockwise in the exchangeable head mount. Then clamp the exchangeable head mount along with the tool in the machine mount.

Place the torque wrench as horizontal as possible on the exchangeable head and ensure the wrench surface is not tilted.

Tighten the exchangeable head using the torque wrench and the appropriate open-end snap-in spanner with the indicated tightening torque (see Table 'Exchangeable head tightening torque').

**Result:**  
the gap between the exchangeable head and exchangeable head holder is closed and the connection is force-fitting and positive-fitting. The exchangeable head is now ready for use.

# ISO standard shaft system fits

- (Excerpt from DIN 7155)
- **Nominal dimensions in  $\mu\text{m}$  (= 0.001 mm)**
- Maintain all shaft h-tolerances for system standard shaft. The maximum shaft dimension therefore goes up to the zero line and is equal to the nominal dimension. The smallest shaft dimension is smaller than its nominal value by the tolerance.
- All information is supplied without guarantee

- Fitting type preferably according to DIN 7157
- (S = clearance fit)

Bores	Fitting type	Nominal dimension from ... to ... mm

# ISO standard bore system fits

- (Excerpt from DIN 7154)
- **Nominal dimension in  $\mu\text{m}$  (= 0.001 mm)**
- In this system all bores are manufactured uniformly with an H-tolerance. The minimum bore dimension therefore goes precisely up to the zero line and is equal to the nominal dimension. The maximum dimension exceeds the zero line by the tolerance.
- All information is supplied without guarantee

Shaft tolerance a - z

- Fitting type preferably according to DIN 7157
- P = press fit
- S = clearance fit
- Ü = transition fit

## Guideline values for surface qualities

INFO

Roughness depth range Rz $\mu\text{m}$	Rt specification $\mu\text{m}$	complies with Ra value	ISO roughness classes	ISO 1302	Corner radius r (mm) and feed f (mm)			
					r = 0.4	r = 0.8	r = 1.2	r = 1.6
63 - 100	Rt 100	12.5 - 25	N 11	25.0	-	0.51	0.69	0.88
40 - 63	Rt 63	6.3-25	N 10	12.5	0.27	0.43	0.56	0.68
31.5 - 40	Rt 40	4.9 - 6.3	N 9	6.3	0.25	0.37	0.49	0.57
25 - 31.5	Rt 31.5	4.0 - 4.9	N 9	6.3	0.22	0.32	0.41	0.47
16 - 25	Rt 25	2.5 - 4.0	N 8	3.2	0.20	0.28	0.36	0.39
10 - 16	Rt 16	1.6 - 2.5	N 8	3.2	0.15	0.22	0.29	0.31
6.3 - 10	Rt 10	1.0 - 1.6	N 7	1.6	0.10	0.13	0.18	0.20

## Calculation formula (theoretical value):

$$R_t = \frac{f^2}{8 \times r} \times 1000 \mu\text{m}$$

Rt = surface quality  $\mu\text{m}$ 

f = feed mm/rev

r = corner radius mm

## Feed calculation

$$f = \sqrt{\frac{R_t \times 8 \times r}{1000}} \text{ mm}$$

**D'ANDREA® Modular tool system**

• Please adjust these guideline values according to clamping operation and machine set-up!

## ATORN® Machine saw blades HSS

- Precision-machined machine saw blade HSS with special heat treatment for a long service life
- Very high surface quality for exact and straight cutting
- High-quality cutting material for high demands on service life
- **Use:** for precise, quick and efficient sawing
- **Quality:** HSS DMo 5 Quality (Material No. 1.3343)
- **For materials up to a tensile strength of 1100 N/mm<sup>2</sup>**

## ATORN® Machine saw blades HSS-Co

- Long service life and short cutting times
- Cobalt-alloyed machine saw blades are particularly suitable for tough and hard materials such as alloyed, unalloyed and heat-treated steel, as well as high-strength steel and stainless steel.
- High-quality cutting material for high demands on service life
- **Use:** for precise, quick and efficient sawing
- **Quality:** HSS-Co. EMo 5 Co 5 Quality (Material No. 1.3243).
- **For extremely hard materials up to 1300 N/mm<sup>2</sup> e.g. austenitic steels and steels with a high chromium-nickel content**

## ATORN® Machine saw blades HSS bi-metal

- Long service life and short cutting times
- The perfect combination of flexibility and durability with special heat treatment for a long service life
- Very high surface quality for exact and straight cutting
- **Use:** for precise, quick and efficient sawing
- **Quality:** HSS bi-metal, DMo 5-cutting edge quality (Material No. 1.3343) on a special steel back
- **For materials up to a tensile strength of 1100 N/mm<sup>2</sup>**

## ATORN® Metal band saw blades, continuous

- Additional dimensions and toothing available on request

### Bi-metal band saw blades with combination teeth, continuous

- For machines, for example Heska, Amada, DoAll, Jaespa, Pehaka, Kaltenbach, Müller

- Particularly wear-resistant with a high degree of cutting precision
- For rust-proof and acid-proof steel in medium and large cross-sections
- For all steel grades up to 45 HRC
- For non-ferrous metals
- For all material diameters and contour cuts

# SARA® Metal circular saw blade

HSS
DIN 1837A
Typ N
*i* Vc/tz 746

- **Fine-toothed**
- **Double helical tooth, form A**, lateral bevel grinding (hollow-ground)
- Hole without keyway
- For fine slotting and end-to-end cutting work, for low-depth cutting or for thin-walled materials

Fine-toothed, Form A, double helical tooth, DIN 1840 (rake angle 5°)

# SARA® Metal circular saw blade

HSS
DIN 1838C
Typ N
*i* Vc/tz 746

- Coarse-toothed
- Curved toothing with lead and raker teeth (HZ toothing)
- Lateral bevel grinding (hollow grinding), bore hole without keyway
- This tooth form is primarily used for end-to-end cutting as the raised lead tooth makes it impossible to achieve a straight finish at the base of the cut with non-continuous cutting or milling. Otherwise, these blades can be used as specified in DIN 1838 B.

Coarse-toothed/HZ, Form C, curved tooth, DIN 1840 (rake angle 15°)

# SARA® Solid carbide circular saw blade

- **Fine-toothed**
- **Double helical tooth, form A**, lateral bevel grinding (hollow-ground)
- Hole without keyway
- For fine slotting and end-to-end cutting work, for low-depth cutting or for thin-walled materials

Fine-toothed, Form A, double helical tooth, DIN 1840 (rake angle 5°)

# SARA® Solid carbide circular saw blade

**VHM** **DIN 1838** **i** **Vc/fz** **747**

- **Coarse-toothed**
- **With curved tooth, form B**, lateral bevel grinding (hollow-ground)
- Hole without keyway
- For coarse slotting and end-to-end cutting work, and for machining with large cutting depths and cross-sections up to max. 100 mm depending on dimensions, pitch, number of teeth and feed rate/cutting speed

Coarse-toothed, Form B, curved tooth, DIN 1840 (rake angle 15°)

# SARA® Metal circular saw blade, precision version

HSS
HSS-E
*i*  
Vc/tz
748

- Precision version for use on slow-running circular saw machines or cold circular saws from various manufacturers (ADIGE, EISELE, BERG&SCHMID, IBP, THOMAS, MEP, KALTENBACH, TRENNJÄGER, HÄBERLE etc.)
- Steam-treated surface to prevent material welding, enhance coolant absorption and increase wear resistance
- **Quantity and dimensions of driving pin holes: (quantity / bore hole Ø / pitch circle Ø)**

### Usage recommendation for

#### tooth pitch t: 3 + 4

tooth form BW = profiles and pipes, wall thickness 1.0-2.0 mm  
approx. 40-60 rpm depending on diameter

#### tooth pitch t: 5

tooth form BW = profiles and pipes, wall thickness 2.0-3.0 mm  
approx. 40-60 rpm depending on diameter  
solid material, cross section 10-20 mm,  
approx. 20-40 rpm depending on diameter

#### tooth pitch t: 6 + 8

tooth form HZ = solid material, cross section 20-40 mm  
approx. 20-40 rpm depending on diameter

#### tooth pitch t: 10

tooth form HZ = solid material, cross section 40-60 mm  
approx. 20-40 rpm depending on diameter

**Note:** Please ensure that the saw blade is undamaged, that it has been mounted correctly, that there is sufficient cooling, that the blade is engaged correctly and that workpieces are properly secured to prevent slippage. Failure to do so puts the saw blade at risk of breaking!

## SARA® Disc milling cutters

HSS-E

DIN 1834

Typ N

- **Narrow version**
- **3 cutting edges**
- Type N, cross-cut tothing
- Bore with longitudinal groove in accordance with DIN 138
- Smooth cut thanks to helical tothing
- Optimum chip removal with spacious chip chambers
- Milling cutters are self-freeing to prevent jamming

## End milling cutters HSS and solid carbide

INFO

## HSS

**High-speed steel** is a high-alloy tool steel that is largely used as a cutting material i.e. for milling tools, drills, turning tools and broaching tools. The name refers to three to four-times higher cutting speeds compared with conventional tool steel. While conventional tool steel loses its hardness from approx. 200°C, high-speed steel retains its hardness up to approx 600°C.

**Universal**  
primarily for ISO P

Page 442

## Solid carbide

Cutting tools that are made entirely of carbide, compared with coated tools or tools composed of various materials, are classified as **solid carbide** or SC.

**Universal**  
primarily for ISO P

Page 466

**Stainless steel / superalloys**  
primarily for ISO M

Page 525

**Aluminium**  
primarily for ISO N

## End milling cutters HSS and solid carbide

**INFO**

## Solid carbide

Cutting tools that are made entirely of carbide, compared with coated tools or tools composed of various materials, are classified as **solid carbide** or SC.

**Universal**  
primarily for ISO P

**Page 466**

**Stainless steel / superalloys**  
primarily for ISO M

**Page 525**

**Aluminium**  
primarily for ISO N

**Page 499**

**Graphite**  
primarily for ISO N

**Page 534**

**Composites**  
primarily for ISO N

**Page 541**

**Hard materials**  
primarily for ISO H

**Page 553**

## Solid carbide milling cutter range

for modern **milling strategies**.

**HPC**

**Page 484**

**HPC Power**

**Page 492**

**Trochoidal**

**Page 495**

**Form milling cutters and  
deburring tools**

# SARA® Slot milling cutter

- **With clearance**
- Straight shank up to Ø 2.5 mm smooth, from Ø 2.8 mm with driving planes in accordance with DIN 6535-HB
- **Optimum chip removal due to extremely smooth surface**
- **For P9 grooves**
- **Cutting material: ultra-fine grain solid carbide, TiAlN-Ultra-coated**

## SARA® Mini end milling cutter

- Straight shank with driving plane, up to  $\varnothing$  1.8 mm smooth
- **Cutting material: ultra-fine grain solid carbide, TiAlN-Ultra-coated**
- **Note:** This milling cutter is not cost-effective to re-sharpen. It is more economical to use the cutters up to their wear limit and replace them with brand new tools.

## VAN HOORN CARBIDE VHRFFW roughing cutter

- Cutting material: ultra-fine grain solid carbide, TiAlN-coated
- Special microwave pre-treatment and finishing treatment
- New chip flute geometry for enhanced cooling and chip flow
- For wet and dry machining, extremely high chip removal rates and long service life

**Feed rate up to 3 m/min.**

# Hydraulic expansion chucks

- Reduced-vibration tool clamping
- Increased tool endurance
- Reduced micro-nicks on the tool cutting edge
- High torque transfer
- High level of positioning accuracy and precision

# Torus milling cutter WXS-CRE HPC-Turbomill

NEW

VHM Z 5 Z 4 TiAlN HPC HSC 794

**Twisted cutting edge, quiet operation up to 65 HRC, finishing geometry, feed rates up to 20,000 mm/min**

- 5 cutting edges, face cutter geometry for plunge milling
- Straight shank, suitable for use in shrink fit holders
- Thanks to a **newly developed cutting edge geometry**, this milling cutter is especially suitable for **extremely high feed rates** with normal-strength and **hardened materials**
- New, extremely ductile and fracture-proof ultra-fine grain quality with enhanced multi-layer coating (Ultra-WXS)
- **Cutting material: ultra-fine grain solid carbide, TiAlN-coated**

### SARA® The 35 - 38 ° HPC series

**With irregular helix angle and an extremely high material removal rate**

- Minimisation of vibration
- Better surface finish
- Protective chamfer F for increased service life
- Optional shank for greater cutting depths
- High-performance layer for high hot hardness and oxidation resistance
- Ideally suited for high performance cutting
- Short and long designs for machining steel, cast iron, stainless steel and titanium alloys

**The universal tool for all roughing and finishing work**

**INFO**

# SARA® End milling cutters

- Irregular helix angle and pitch for low-vibration milling
- With protective chamfer F for improved service life
- Also suitable for dry machining

# SARA® Drilling and plunge milling cutter

- Face geometry for drilling and ramping
- With clearance
- Irregular pitch to minimise vibrations
- High material removal rate
- High feed rates for plunge milling and groove milling
- Up to 45° plunge angle
- Undersized for precise fitting grooves

**Drilling and milling with one tool**

**Tough on everything!**

The performance of the low-vibration premium tools was significantly increased with the new ATORN HPC POWER high-performance range. It offers a milling range with innovative HPC geometry designed for efficient and universal machining of steel, stainless steel, non-ferrous metal, cast iron and special alloys.

Significantly higher material removal rates in machining are the result of various spiral angles in conjunction with newly developed, robust face and surface cutting edges. Even with extreme cutting data, the tools impress with their ultra-smooth operation, high process safety and low machine loads. Plunge milling and ramping processes are enhanced by the optimised face geometries. The new solid carbide with an innovative PVD high-performance coating also contributes to improved service life and safer chip removal.

**Advantages:**

- Increased productivity – roughing and finishing with the same tool
- Excellent surface quality even with high feed rates
- Long service life thanks to optimised cutting edge geometries and high-performance coatings
- Machining methods such as plunge milling/drilling or ramping possible
- Low machine load thanks to smooth operation, long service life
- Comprehensive possible uses and efficient machining of tough materials
- Suitable for all modern milling strategies e.g. trochoidal milling

**UNIVERSAL**
**P M K N S**

Dual cutting edge protection with edge protection chamfer and robust face-cutter  
 Optimised face-cutter geometry with large chip spaces  
 Long design with axial internal cooling available

The HPC POWER groove milling cutter is a 3-edge high-performance tool. With its large chip spaces and excellent chip removal, it is ideal for groove milling. Each cutting edge has another helix angle (33°/35°/37°). In addition to the entire range of stainless and acid-resistant steels, it can also be used in all aspects of steel machining.

**Features:**

- Ø range 4 - 20 mm
- Long version
- Each cutting edge has another helix angle (33°/35°/37°)

**STEEL**
**P K**

Dual cutting edge protection with edge protection chamfer and robust face-cutter  
 Defined cutting edge honing increases the service life and process safety  
 Radius-shaped gashing for improved chip removal

The performance of the low-vibration premium tools was considerably increased with the HPC POWER solid carbide end milling cutter for steel and cast iron: significantly higher material removal rates in machining are the result of various spiral angles in conjunction with newly developed, robust face and surface cutting edges.

A feature of the ATORN HPC POWER milling cutter is its multi-functional application: Roughing and finishing can be achieved with the same tool. Similarly, narrow bridges and grooves up to 2xD with outstanding surface quality can be produced.

**Features:**

- Ø range 4 - 20 mm
- Long version
- Unequal helix pitch (35°/38°)
- Low power consumption
- Stable cutting edge and edge protection chamfer
- Optimised face-cutter design

**Stainless steel**
**M N S**

New edge protection in the form multi-chamfer grinding  
 Optimised gashing in the centre  
 Long version with radial internal cooling available

The 4-edge high-speed milling cutter was specially developed for cutting stainless and acid-resistant steels, titanium and nickel-based alloys, as well as short-chipping aluminium.

Special cutting geometries combined with the optimum carbide quality and multi-layer, fine-crystal PVD coating set new standards in machining demanding materials. Chip formation, chip removal and temperature resistance were optimised and guarantee high-performance with demanding cutting data.

**Features:**

- Ø range 4 - 20 mm
- Unequal helix pitch (41°/44°)
- Optimised cutting edge design (multi-chamfer grinding)
- Perfect for modern milling strategies

## ATORN® HPC Power end milling cutter, universal

- Irregular helix angle and pitch for low-vibration milling
- With protective chamfer F for improved tool life and stable face milling, double protected
- Optimised face-cutter geometry with large chip spaces
- With clearance
- ULTRA coated for maximum service life

## The ULTRA-N high-speed milling range for the milling of aluminium

With the new ATORN range, Sartorius offers a complete milling range for machining aluminium. The ATORN milling program ULTRA-N sets technical benchmarks here:

- extremely soft cut, optimum chip removal and excellent running smoothness
- short processing times thanks to high usage parameters
- excellent surface quality
- no or minimal burr formation
- Precision thanks to low manufacturing tolerances
- coating specially designed for machining aluminium

Also very good for synthetic materials

## ATORN® Ultra-N mini end milling cutter

- With clearance
- 2 cutting edges, with edge chamfer F
- With defined cutting edge rounding from Ø 1.5 mm
- Long-necked version for non-ferrous materials
- Cutting edge tolerance 0/-0.015 mm
- Cutting material: superfine grain solid carbide, **ZrCN Ultra-N**-coated

VAN HOORN CARBIDE VHLAW end milling cutter

- **Roughing cutter** for a broad range of applications (non-ferrous metals and plastics)
- Highly positive rake and clearance angles as well as sharp cutting edges guarantee
- **very low cutting forces** and **minimal cutting pressure**  
Large chip flutes for reliable chip removal at **up to 50 % higher feed rates**, resulting in shorter machining times

## ATORN® High-performance milling tools Ultra-N

INFO

### Tool geometry

An optimal cutting-, micro- and chip-space geometry is particularly crucial in aluminium machining. Based on numerous machining tests, the geometries have been revised and adapted perfectly to the requirements of aluminium machining:

- maximum core diameter for high stability
- special cutting geometry to reduce cutting pressure
- optimal chip-space geometry for process-reliable chip removal
- Increased service life thanks to µm-precise cutting-edge rounding

### Wear-resistant carbide metal

The basic substrate consists of H10F fine-grade solid carbide for aluminium with a grain size of 0.6 - 0.8 µm. This substrate is especially wear-resistant, hard and resistant to pressure.

It can best withstand the dynamic and mechanical loads to be encountered. This is particularly important in the event of vibrations, which can easily lead to chinking on the cutting edge.

### Defined cutting-edge rounding

The basic aim of a cutting-edge rounding is to increase the service life of the tool and of the cutting edge. In the cutting tool grinding process, the cutting edge loses its definition due to micro-fractures (chinking). Through a defined honing, a process environment can be achieved at an early stage; that is, grinding-related points are removed and the risk of comb cracks minimised.

Conventional methods for the cutting edge rounding had the disadvantage that they were unable to create a reproducible and even honing of the cutting edge. The new technology allows optimum process control and reproducibility. With it, a uniform, µm-precise honing of the cutting edge and face can be achieved. This has a positive effect on the quality and service life of the tools and significantly improves your workpiece surfaces.

### Improved tolerances

Precision produces quality: one reason why this new generation of tools is manufactured to tighter tolerances. Basically, all shanks are made in h5 quality and all cutting edges in g7 quality.

# ATORN® Ultra-N radius milling cutter

- With clearance
- With defined cutting edge rounding
- For non-ferrous materials
- Radius tolerance +/- 0.01 mm
- Cutting material: superfine grain solid carbide, **ZrCN Ultra-N**-coated

**Carbon high-performance thin-layer coating**

for machining CFRP, GFRP, aluminium, copper, graphite, ceramic, wood and sandwich materials, for forming materials with an adhesive tendency (e.g. aluminium)

**Hardness 6000 HV**

**Coating properties**

Material	amorphous, hydrogen-free carbon layer
Micro hardness	> 5000 HVpl 20 mN; standard: 6000-7500 HVpl 20 mN
Application temperature	max. 550°C
Colour	rainbow colours, up to anthracite

**Advantages**

- Good sliding properties and high layer hardness (approx. 60-80 % the hardness of diamond)
- Extremely durable and low-friction (wear protection coating for lubricated and non-lubricated inserts)
- Good milling and cutting quality
- No rounding of sharp-edged tools
- Coating performed at < 250°C. Even temperature-sensitive substrates can be coated.

# ATORN® Trochoidal milling cutter Ultra-N PRO

VHM 30° e8 h6 DIN 6535 HA DIN 6535 HB Z 3 Ta-C TVC Vc/fz **787**

- 3 cutting edges, with edge chamfer
- Spiral angle 30°
- 3.5 x D
- For non-ferrous materials
- Cutting material: solid carbide with DLC-sp3 coating
- With polish grinding in the chip chambers
- Large chip space for unhindered chip removal

**ATORN® High-speed milling cutters for stainless steel and special alloys****INFO**

The new generation of ATORN milling cutters are characterised by excellent performance in the machining of stainless steel and special alloys containing metals such as nickel, cobalt and titanium. An ultra-fine-grain carbide metal substrate in combination with high-performance geometry and specially developed ULTRA-MS coating make these tools absolutely process-safe and wear-resistant and allow a high metal removal rate.

The new geometries – i.e., adapted core diameters, optimal and positive rake and helix angles and corresponding microgeometries – allow for high feed rates and deliveries. One example of this are the 4-edge HPC milling cutters. These are designed with unequal flute spacing and unequal helix pitch. This design not only makes the tools suitable for use in **HPC milling**, but allows trouble-free **trochoidal milling** as well.

The range includes HSC- and HPC-enabled tools for roughing, semi-roughing and finishing from  $\varnothing$  0.2-20 mm. The excellent stability during machining leads to process safety and high-quality surfaces, which cuts costs and boosts efficiency.

The mini-end milling cutters, also available as torus and radius milling cutters, round out the range.

**ATORN®**

High quality for great performance

**Extreme temperature resistance thanks to ULTRA-MS**

The special ULTRA-MS coating can handle application temperatures of up to 1100 ° C. That's important, because these special alloys are poor heat dissipaters.

**Maximum service life**

The ULTRA-MS coating significantly increases the service life of the tools.

**Perfect cutting edge geometry makes for quiet running**

Perfectly matched to the machining conditions in stainless steel and special alloys:

positive cutting geometries ensure soft cuts and smooth running

**Low vibrations, even in border areas**

The unequal helix pitch and unequal flute spacing reduce vibrations during machining

**High precision**

For precise components, high-precision edge radii, among other things, with a tolerance of less than 0.01 mm, ensure

**The highest surface quality**

The multitude of special features guarantees the highest quality surface finishes with no chatter marks, and much more.

Overview of the range				Ø-area mm		Page

# SARA® Diamond-coated end milling cutter DIA+

INFO

Specially designed for our diamond range, the crystalline diamond coating is ideal for machining **graphite, GFRP materials** and **copper**. Thanks to the outstanding coating adhesion on the specially selected carbide, you achieve maximum service life with our diamond range.

This coating is also extremely abrasion-resistant, and there is no typical CVD nose on the sharp cutting edges. This means greater efficiency, lower costs and thus increased yield.

## Special features

- High-tech CVD diamond coating
- Improved geometry
- Increased wear resistance thanks to crystalline diamond coating
- Layer thickness 10+2 µm
- Hardness 10,000 HV

**Especially for machining graphite**

### SARA® DIA+ mini radius milling cutter

VHM
Typ N
30°
h9
h5
DIN 6535 HA
Z 2
DIA
HSC
Vc/fz 790

- Crystalline diamond coating
- Reliable graphite, GFRP and CFRP machining
- With clearance
- Radius tolerance +/- 0.0003

**Layer thickness 10+2 µm**

material	● very well suited	steel			stainless steel			cast iron		superalloys Fe/NiCo-based		aluminium		copper	graphite	hardened steel			
	○ well suited	< 700 N/mm²	< 1000 N/mm²	< 1400 N/mm²	ferrit/martens.	austenitic	duplex	GG/GTS	GGG	titanium alloys	< 30 HRc	≥ 30 HRc	< 8 % Si	≥ 8 % Si	Cu alloy	GRP/CFP/thermo.	< 55 HRc	< 60 HRc	≥ 60 HRc
															●	95-300			

Cutting speed Vc m/min. Please adjust these guidelines according to clamping operation and machine set-up.

palbit PKD end milling cutter

NEW

PKD Z 2 Z 3 799

- One or two cutting inserts made of polycrystalline diamond (PKD) are attached to the shank for centre cutting.
- **Application:** for aluminium, reinforced plastics, graphite, composites and other highly abrasive materials
- Due to its extreme hardness and low wear, **non-ferrous metals** such as aluminium can be machined without any cooling.
- This achieves the best surface finishes
- Long service life and cutting speed and can be reground multiple times
- **Please note that diamond tools are not suitable for calibration with measurement systems that require an electronic contact due to their lack of electrical conductivity.**

## Solutions for composite

The efficient machining of modern materials such as fibre-reinforced plastics, honeycomb composites, aluminium, titanium and composites requires a new generation of cutting tools. The interaction of geometry, cutting material and coating creates the right material for machining such modern materials. All materials are designed to satisfy a range of requirements that occur when machining new materials.

Our tools have proven their quality in various tests: Proven cutting angle and cutting material combined with specially polished chip flutes ensure low cutting forces and problem-free chip removal.

This prevents delamination, outstanding residual fibres, roll-over and thermal damage to the workpiece.

We offer a comprehensive range of high-performance tools for optimum drilling and milling results in modern materials.

CFRP

CFRP-titanium sandwich

Honeycomb

Fibre plastics

Alu honeycomb with GFRP cover

Aluminium honeycomb with aluminium cover

### Polished chip flute

Rapid-Line HSC milling cutters have considerably enhanced chip flow. Machining temperatures are lower, thus avoiding overheating and welding pick-up. Rapid-Line milling cutters have a significantly longer service life and can also produce better surface qualities. We recommend our "RAPID-Shine" product range for machining ultra-transparent surfaces. Thanks to their special cutting geometry and lapped cutting edges, these milling cutters are ideal for machining ultra-transparent plastic materials.

### Pyramid tooth

A special grinding process combines polished chip flutes and ultra-sharp cutting edges. This results in low friction coefficients and high cutting stability. Designed primarily for machining CFRP and GFRP, we offer 3 different profile types - Fine, Medium and Coarse - as well as 3 different spur toothings for drilling, face milling and edge banding.

### Honeycomb

The honeycomb structure is first cut and then separated, but never crushed. The result is high-quality surfaces that can be machined further with ease.

### Coating

Our customers' requirements are diverse. Depending on the machining process, we offer various coatings to enhance the machining result. Whether extremely thin diamond HC coating or a multi-layer diamond coating, we have the right coating for your application.

## ATORN® Compression milling cutter

**Additional versions available from the manufacturer**

- For fibre plastics
- **Counter-rotating chip flutes with chip breakers**
- Spiralisation change from left to right
- Axial cutting forces converge in the centre
- **Finishing quality ( $ra < 2 \mu m$ )**
- Simultaneously pulling and pushing cut
- **Surface Dia-HC-coated**

## ATORN® Milling cutters with groove milling head

**Additional versions available from the manufacturer**

VHM      791

- Pyramid-shaped bevel tooling, draw cutting
- Groove milling cutter bit for drilling, grooving, edge banding
- Extremely sharp cutting edges
- **Fine: fibre plastics with a high fibre content**
- **Medium: soft fibre plastics with an adhesive tendency**
- **Coarse: sandwich materials and foams**
- Polished and/or **Dia-HC-coated**

material	● very well suited ○ well suited	aluminium		copper	plastics			timber	honeycomb	AFRP	GFRP /CFRP		graphite

### ATORN® Milling cutters for honeycomb composite materials

Additional versions available from the manufacturer

- For honeycomb composite materials
- Special toothing with drawing cut
- Good surface for further finishing
- **Extremely sharp cutting edges**
- Multi-flute spur toothing
- From Ø 16 mm with HSS shank

material	● very well suited ○ well suited	aluminium		copper	plastics			timber	honeycomb	AFRP	GFRP /CFRP		graphite

## ATORN® Carbide rotary burs

3D  
PRINT

792

- Similar to DIN 8033
- Shank Ø 6 mm
- Solid carbide up to head Ø 6 mm, brazed from head Ø 8 mm
- Precision manufacturing on the latest CNC grinding machines guarantees exact and uniform cut with optimised cutting geometry
- For machining high-strength and tough materials as well as non-ferrous and lightweight metals
- Roughing and finishing on hand-operated machines
- Effective when used on stationary internal grinding machines and jig boring machines (milling and finish milling)

## Carbide rotary cutter for fine machining

792

Carbide metal rotary cutters with **MICRO teeth** are specially designed for **fine cutting** and are used in areas where grinding points are normally used. They offer a higher cutting performance and produce a high-quality surface finish, particularly compared with conventional milled surfaces. At the same time, they are **low vibration and produce little noise**. They retain their geometry throughout their entire service life. They are ideally suited for machining tasks during manual and machine use.

### Advantages:

- High-quality surface finish
- No change in geometry due to wear and tear compared to grinding points
- Machining of almost all materials up to 68 HRC

### Machining tasks:

- Fine machining
- Very fine plaster work
- Corrections to tool and mould making
- Sharpening of cutting tools

### Machinable materials:

- Steel and cast steel
- Stainless steel (INOX)
- Non-ferrous metals
- Cast iron

### Recommendations for use:

- Where possible, use the tools on high-performance drives with flexibly-mounted spindles to avoid vibrations.
- To ensure the efficient use of rotary cutters, work at high rotational speeds/cutting speeds. Performance recommendation for tool drives:
  - Shank  $\varnothing$  3 mm: 75 to 300 watt
  - Shank  $\varnothing$  6 mm: from 300 watt
- Please observe the recommended speeds.

### Suitable tool drives:

- Flexible shaft drives, straight grinders, robot applications, tool machines

**ATORN® RockTec complete range for materials up to 52/65 HRC**

**INFO**

**Over 660 innovative solid carbide milling tools**

- For all instances of machining and usage, you now get a complete ATORN range of solid carbide end milling cutters, solid carbide torus milling cutters and solid carbide radius milling cutters.
- **Diameter range from Ø 0.1 – Ø 20 mm**
- The different geometries are matched to different milling operations.
- **Cutting material: solid carbide ultra-micrograin of high hardness and extreme toughness**

**ATORN® RockTec Highest efficiency through new coatings****INFO**

ATORN milling tools offer the best conditions for the efficient machining of materials up to 65 HRC. Through a special cutting-edge treatment, as well as the new coatings, you achieve the highest machining performance, precision and durability.

**RockTec 52**

Cutting material:	Ultra-superfine grain
Grain size:	0.005 mm
ISO quality:	K 10/K 40
Coating:	AlTiN (monolayer PVD)
Layer thickness:	2.5 ~ 3.5 µm
Micro-hardness:	(HV 0.05) 3,300
Application temperature:	≥ 900 °C
Friction coefficient:	0.25

**RockTec 65**

Cutting material:	Ultra-superfine grain
Grain size:	0.005 mm
ISO quality:	K 10/K 40
Coating:	TiSi-based (multilayer PVD)
Layer thickness:	2.5 ~ 3.5 µm
Micro-hardness:	(HV 0.05) 3,600
Application temperature:	≥ 1,200 °C
Friction coefficient:	0.3

**Tools up to 52 HRc**

Example Solid carbide end milling cutters

Helix angle:	40°
Rake angle on the external Ø:	2°
Core diameter:	65%

**Tools up to 65 HRc**

Example Solid carbide end milling cutters

Helix angle:	40°
Rake angle on the external Ø:	-10°
Core diameter:	65%

**ATORN®****Advantages of hard machining**

Save on costs – boost efficiency with hard machining

HSC

HPC

**High flexibility**

- Hard machining can replace grinding and EDM in many cases

**Boost quality**

- No heat warping due to subsequent tempering
- High-quality surface finish

**Time savings**

- Workpiece can be machined in one clamping procedure
- Fewer work-steps thanks to high machining volume

**Discover maximum quality in all areas of tool and mould manufacture.**

## ATORN® RockTec 52 mini end milling cutter

- Short, stable design for machining materials **up to 52 HRC**
- Cutting edge tolerance: at  $\varnothing$  0.1 - 0.7 mm = 0/- 0.012 mm, at  $\varnothing$  0.8 - 0.9 mm = 0/- 0.020 mm
- **Cutting material: ultra-fine grain solid carbide**
- Rake angle 3°

## ATORN® RockTec 65 mini end milling cutter

- Short, stable design for machining materials **up to 65 HRC**
- Cutting edge tolerance: at  $\varnothing$  0.1 - 0.7 mm = 0/- 0.012 mm, at  $\varnothing$  0.8 - 0.9 mm = 0/- 0.020 mm
- **Cutting material: ultra-fine grain solid carbide**
- Rake angle -5°~7°

material	● very well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper	graphite	hardened steel

ATORN® RockTec 65 torus cutter

VHM Z 4 793

- With clearance
- For machining materials up to 65 HRC
- Radius tolerance: 0/0.01 mm
- Cutting material: ultra-fine grain solid carbide
- 6°~10° rake angle

# ATORN® RockTec 65 mini radius milling cutter

- **With clearance**
- Long-necked version for machining materials **up to 65 HRC**
- Cutting edge tolerance: at  $\varnothing 0.1 - 0.7 \text{ mm} = 0/-0.012 \text{ mm}$ , at  $\varnothing 0.8 - 3.0 \text{ mm} = 0/-0.020 \text{ mm}$
- Radius tolerance:  $0/0.01 \text{ mm}$
- **Cutting material: ultra-fine grain solid carbide**
- Rake angle  $-5^\circ$

INFO

to  
**65**  
HRC

## TRUE, INHERENT POWER

- particularly suited to machining steels <1400 N/mm, <55 HRC, <60 HRC and <65 HRC
- wide product range, all geometries with maximum precision
- new TiAlSiN multi-layer coating, extreme hardness and minimal friction

Hard machining is playing a growing role in tool and mould making and is increasingly replacing time-consuming processes such as grinding or eroding. But also in other sectors, components must still be reworked after hardening. This often poses enormous challenges for milling tools. And now, ATORN presents ultra-specialist milling tools for all conceivable milling applications.

These **high-performance tools** are optimally designed for hard machining **up to 65 HRC**.

Due to their optimised geometry and the new extremely hard multi-layer coating, ATORN RockTec PRO milling tools guarantee low abrasion and are therefore particularly wear-resistant.

For example, they can handle high-alloy tool steels such as 1.2379 at high feed rates up to 250 m/min and tooth feeds 0.001 to 0.15 mm.

Mini-radius milling cutter from Ø 0.1 mm

Radius contour radius copy milling cutter	0 / -0.005 mm
Clearance diameter	0 / -0.01 mm

**Test Winner**

RockTec PRO emerged the winner in a comparative test conducted by GFE Gesellschaft für Fertigungstechnik und Entwicklung Schmalkalden e.V. Set against the competition, RockTec PRO milling cutters proved themselves in hard milling trials.

A 1.2379 (X153 CrMo V12) tool steel with a hardness of 58 HRC was machined. This involved milling test tracks with defined ap and ae using different solid carbide milling cutters. RockTec PRO milling cutters exhibited the longest tool life overall and thus were Number 1 in the overall rating.

**Test results**

- low flank wear
- few nicks
- low edge build-up
- minimal coating wear

**Spiral angle** .....  
for extremely soft cutting in hard materials

**Geometry** .....  
reliable chip removal and consistently high process reliability

**Cutting material** .....  
Micrograin solid carbide, especially for hardened steels

**Front face** .....  
optimised radii and front face geometries

**Cutting edges** .....  
relief-ground cutting edges

**Coating** .....  
TiAlSiN multi-layer coating with extreme hardness

**ATORN® Trochoidal RockTec PRO end milling cutter**

- For machining materials from 47 to 65 HRC
- **Milling cutter designed for TVC use**
- With chip breaker
- Reinforced core
- Optimised geometry for hard machining
- **Solid carbide ultra-fine grain cutting material**
- State-of-the-art coating technology for reduced wear and extreme hardness
- **Subject to process-related colour variations in the coating.**

# ATORN® Torus milling cutter RockTec PRO

- For machining materials **from 47 to 65 HRC**
- Optimised geometry for hard machining
- **Cutting material: ultra micro-grain SC**
- state-of-the-art coating technology for reduced wear and extreme hardness
- **Subject to process-related colour variations in the coating.**

material	● very well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper	graphite	hardened steel		
	○ well suited	< 700 N/mm²	< 1000 N/mm²	< 1400 N/mm²	ferrit./martens.	austenitic	duplex	G6/G15	GGG		< 30 HRC	≥ 30 HRC	< 8 % Si	≥ 8 % Si	Cu-alloy	GRP/CFP/thermo.	< 55 HRC	< 60 HRC	≥ 60 HRC
				● 60-130												● 60-150	● 80-150	● 120-200	
Cutting speed Vc m/min. Please adjust these guidelines according to clamping operation and machine set-up.

# ATORN® RockTec PRO torus face milling cutter

**NEW**

- For machining materials **from 47 to 65 HRC**
- **4 cutting edges, face-cutter geometry for immersing**
- Optimised geometry for hard machining
- Straight shank, suitable for use in shrink fit holders
- **Solid carbide ultra-fine grain cutting material**
- State-of-the-art coating technology for reduced wear and extreme hardness
- **Subject to process-related colour variations in the coating.**

# ATORN® Machining of concentric sealing surfaces

INFO

### Cutting data

The following cutting data are recommended irrespective of the diameters used:

N	3500 rpm
Vf	180 mm/min
ae	max. 1 x D
ap roughing	max. 0.05 mm
ap finishing	0.005 mm (max. 0.01 mm)

Please adjust these guideline values for different applications and according to clamping operation and machine set-up!

### Entry and exit

Entry angle	max. 0.5°
Exit angle	max. 0.0115° (over 25 mm movement 0.005 mm retraction)

### Example:

Ø 8 mm  
Centre ± 0.8 mm  
N = 3,500 rpm  
Vf = 180 mm/min

### Important:

- The achievable planarity is 0.02 - 0.03 mm.
- The tool length must be measured at R0 (Blum laser, pre-setting device).
- The true running accuracy of the clamped tool must not be more than 0.005 mm.
- Circular orbits are visible at ae > 0.5 x D. This corresponds to no more than 10% of the diameter.

## ATORN® Sealing surface milling cutter

### • For manufacturing concentric sealing surfaces for high-quality products

- Only concentric milling contours
- No post-machining required
- Smooth surface
- Helix angle 30°

## ATORN® Ceramics milling cutter

- Helix angle 15°
- For machining nickel-based alloys e.g. Inconel
- Always use air cooling
- Ensure continuous machining
- Do not remove the chips from the cutting area
- **Attention:** Tool, chips and workpiece can get very hot

# ATORN® Curve segment milling cutter

INFO

Reduction of workpiece costs and considerably shorter manufacturing times based on the significant increase in the line spacing ae.

$$ae = 2 \times \sqrt{r^2 - (r - R_t)^2} \text{ [mm]}$$

$$R_t = r - \sqrt{r^2 - \left(\frac{ae}{2}\right)^2} \text{ [mm]}$$

$$\rightarrow R_t \times 1000 \text{ [\mu m]}$$

- r = Radius curve segment milling cutter / copy milling cutter
- ae = line spacing
- Rt = theoretical roughness

# ATORN® Circle segment milling cutter

VHM Typ N DIN 6535 HA Z 4 TiAlN 3D PRINT *i* Vc/fz 802

- Reduction of workpiece costs and considerably shorter manufacturing times based on the significant increase in the line spacing ae
- New manufacturing possibilities
  - Undercuts
  - Semi-finishing and finishing of tight contours
  - Variable setting angle possible
  - Machining of tight inner radii
  - Freeform surfaces
- Improved surface finish
- Increased tool life

# Orbitool deburring tool® for machining on the inside

- **Deburring tool system for intersecting bores**
- Can be used reliably in automated applications with CNC machines
- Fully integrated into the production process **from 2.0 mm bore diameter**
- Free of burrs with no manual finishing
- With the ORBITOOL® deburring tool, the deburring process is easy to control. Material abrasion only occurs on the edges of the workpiece. The (bore) surfaces are not touched thanks to the protective disc. Intact surfaces are not scratched and workpieces are not damaged. This makes work considerably easier, especially with precision parts. Once the protective disc has passed the edges, the cutting surfaces of the deburring tool can cut away material from the edges. Deburring is carried out as the milling cutter moves in a spiral through the axial bore to the centre of the radial bore. In the case of manual deburring with an electric grinding machine, the burrs are removed by forward and backward movements.

### Advantages:

- Consistent results - consistent quality
- Increased throughput capacity/shorter cycle times
- Reduced deburring costs
- No additional deburring work required
- No backlogs in the machining process
- Ideal for CNC machining

## Thread milling / circular cutting

INFO

Thread milling cutters are specially designed for use on CNC milling machines and machining centres which have 3-axis control with helical interpolation.

### Advantages and application

- Male and female threads
- For through-hole and blind bore threads
- Synchronous and up-cut milling and change of the axial feed direction
- Enables production of straight and conical threads and of all standard thread variants
- Thread production with varying tolerances
- Optimal clamping
- Short chips
- Low cutting pressure

### HM quality AMT7

TiAlN-coated ultra-fine grain quality for universal applications with all materials at medium to high cutting speeds

- Low adhesion to the cutting edges
- **Thread length 2 x D**
- Optimised carbide metal types for aluminium, cast iron and stainless steels
- With internal cooling
- Extremely smooth cutting edge
- For thread with highest surface quality

**Especially for aluminium**

## ATORN® Thread end milling cutter

VHM

Z 3

Z 4

Z 5

Z 6

808

- The thread is machined in just one operation
- Chip flutes permit an easy cut
- Short machine times thanks to multiple (3-6) cutting edges
- Operating range from dimension D = 2.2 mm
- Allows thread cutting in blind bores up to the shoulder
- One tool for right-hand and left-hand threads
- One tool for material groups P, M, K, S and H
- Excellent surface finish quality
- Long service life due to special multi-layer coating
- Low cutting pressure makes it possible to machine thin-walled workpieces
- **Cutting material: AMT7 solid carbide, multi-layer TiAlN coating for universal applications**
- **Through-hole version (internal cooling outlet in flute) available on request!**

**Solid carbide thread end milling cutter for the following thread types available on request:**

- UN
- BSPT
- NPT
- NPS
- NPTF
- NPSF
- external threads, metr. full profile
- external threads, UN

**Metric, full profile, ISO 60°, internal, with internal coolant supply**

**SARA® Thread end milling cutter**

- the thread is machined in only one process step
- chip flutes permit soft cutting
- short machining times due to multiple (3-6) cutting edges
- operating range from dimension D = 2.2mm
- thread cutting in blind holes possible up to the shoulder
- one tool for right-handed and left-handed threads
- one tool for the material groups P, M, K, S, H
- excellent surface quality
- long service life thanks to special multi-layer coating
- low cutting pressure permits the machining of thin-walled workpieces

**Metric, ISO full profile, internal**

## ATORN® Thread end milling cutter for small bores

VHM

Z 3

Z 4

Z 5

HSC

808

- Especially for small bores, with straight shank
- Thread cutting from M1 x 0.25 mm, thread depth up to 2 x D1
- Version for thread depths up to 3 x D1 available on request
- Suitable for HSC, extremely low cutting pressure, excellent surface finish quality
- Allows thread cutting in blind bores up to the shoulder
- Long service life due to special multi-layer coating
- One tool for right-hand and left-hand threads
- Cutting material: AMT7 solid carbide, multi-layer TiAlN coating for universal applications
- MTSH version for hard machining up to 62 HRC available on request!

## ATORN® DMT drilling and thread milling cutter

- **High-performance tool with IC for manufacturing female threads**
- Using a circular motion, you cut the tapping hole, mill the thread and countersink in a single operation
- Eliminates the need to pre-drill the tapping hole
- Fast turnaround reduces your machine times
- Suitable for through-holes and blind bores
- **No time wasted on tool changes as only one tool is used for drilling, thread milling and chamfering**
- Full profile tool
- **Anticlockwise spindle rotation, code M04:**  
**Left-hand thread = reverse rotation**  
**Right-hand thread = synchronous rotation**
- Can be used with a large variety of materials
- **Thread depth 2 x D**
- **Cutting material: AMT7 solid carbide, multi-layer TiAlN coating for universal applications**

**Drilling  
Thread milling  
Chamfering**

**The secret of 1-cut machining:**

Evolution from 2-cut machining to 1-cut machining,  
Minimised lateral deflection

<p><b>AT-1</b> Left-hand twist</p>	<p>Conventional thread milling cutter Right-hand twist</p>
<p>Enters the material at the top end <b>Reduced deflection</b> Up-cut milling recommended</p>	<p>Enters the material at the bottom end <b>Strong deflection</b></p>

# 1-cut thread milling cutter AT-1

VHM **DIN 6535 HA** **Z 4** **Z 5** **Z 6** **Vc/fz 809**

- Evolution from 2-cut machining to 1-cut machining
- Unequal pitch and irregular spiral angle reduce vibrations
- Left-hand twist prevents lateral deflection
- New EgiAs coating
- Outstanding wear resistance and robustness
- Ultra-fine carbide with high resistance and durability
- Milling cutter for female threads
- For hardened materials of 25-45 HRC

## ATORN® Holder for thread mill inserts

- With internal cooling
- Supplied with clamping screw and chuck key
- Force-fit insert seat due to 15° bevel on the milling insert

### Standard holder

- Straight shank in accordance with DIN 1835B
- Holder SR0009H12 not for use with the following inserts: 12-18 NPT/NPTF, 12-19 BSPT
- Holder SR0018H21 not for use with the following inserts: 21 I34 ISO, 21 I 8 UN, 21 I 7 UN, 21-11 BSPT, 21-11.5 NPT, 21-11.5 NPTF

# ATORN® ISO thread mill inserts

- Metric, full profile, ISO
- Carbide quality AMT7

TiAlN-coated ultra-fine grain quality for universal applications in all materials at medium to high cutting speeds

Size A inserts = 12 mm have one cutting edge!

Inserts for conical threads have one cutting edge!

Over 200,000 tools available online!

#### Advantages:

- convenient, clear and fast
- order by 19:30 for next-day delivery
- order measuring instruments including calibration
- available in real time
- in 8 languages

Register online now!

# ATORN® Tool system for machining drill holes MINI-MILL

- Type ZH 22 from bore Ø 22 mm
- Solid carbide inserts, quality grade **HC 8620**
- **Solid carbide milling cutter shank** with internal coolant supply
- **Steel milling cutter shank** with internal coolant supply
- 3-rib toothing
- For machining grooves, circlip grooves, ISO metric threads, Whitworth pipe threads and full radius grooves, as well as for chamfering and deburring

**Further tools for bore diameters 10 to 33 mm available on request**

### Removable, vertical thread-mill inserts and holders for a variety of thread profiles

- Front-mounted plate for high precision and excellent performance
- Milling with high cutting rates and perfect surface finish
- Stable and precise clamping for consistent reproducibility
- Same plate for right-hand and left-hand threads
- Tool holders with Weldon shank and internal cooling
- Plates for countersinking, grooving and face milling

### One holder for all machining situations

SRC 2018 J with internal coolant supply

Tool system for  
vertical thread milling

Range significantly expanded

## ATORN® CMT clamp mounting for vertical thread milling

- Solid carbide milling cutter shank with internal coolant supply
- Steel milling cutter shank with internal coolant supply

### DIN 6535 HB steel shank with internal coolant supply

TOOL

**WORN-OUT.**

THAT WON'T

**STOP YOU**

**BECAUSE YOU ARE ALWAYS PREPARED:  
SARA® GO TOOL DISPENSING SYSTEM.**

**THAT'S POWER TO PRODUCE**

**SARATOOLS.com**

**POWER TO PRODUCE**

A BRAND OF SARTORIUS WERKZEUGE

**Reduced costs**

### Properties

- Low tooling times
- A wide range of geometries
- Various shank shapes
- Diameters from 10 to 20 mm

### Advantages

- High true-running accuracy <math>< 20\mu\text{m}</math>
- High stability and stiffness thanks to pilot pins
- Low-vibration
- Guaranteed repetition precision

### Perfect friction and form fit thanks to innovative design

### A modular system for a wide range of tasks

- For ISO material groups P, M, N, K, H
- For roughing and finishing all contours
- Optimal for series production
- Particularly suitable for multiple-spindle automated lathes without tool changer and lathes with driven tools

### Cost advantages

- Replacement of the head, shank remains clamped
- Up to 50 change cycles per shank possible
- Replaceable heads can be resharpened
- Quick change
- Reduced auxiliary processing times

**ATORN® 45° end milling cutter, SE.T 1204**

- For ISO milling inserts, type SE.T 1204
- Highly positive rake angle
- Weldon shank
- Easy-action, low-noise milling
- Large insert thickness
- For plunge milling and face milling
- Supplied with clamping screws and wrench
- Can be used on machines with low drive power and in unstable conditions
- **Cutting angle:** Tool cutting edge angle 45°, axial rake angle 16°, radial rake angle -6°

**ATORN® 45° face milling cutter**

- For ISO milling inserts, **SN.X 1206, SNMU 1260, ONMU1205**
- Innovative double-sided indexable cutting inserts with large rake angle, use of eight cutting edges (SN\_X, SNMU)
- Innovative double-sided indexable cutting inserts, use of sixteen cutting edges (ONMU)
- Easy cutting action with low machining force
- Excellent surface finish
- Very broad range of applications
- Use on many metals including steel, stainless steel, cast iron and aluminium
- Supplied with clamping screw and wrench
- ap max. 5.5 mm (SN\_X, SNMU)
- ap max. 3.0 mm (ONMU)
