- Excellent surface finish
- Very broad range of applications
- Wide range of materials, including steel, stainless steel, cast iron and aluminium
- Supplied with clamping screw and wrench
- ap. max. 8.5 mm (SN..)
- ap. max. 3.8 mm (ON..)

## ATORN® 45° face milling cutter

- For ISO milling inserts, type SE.N 1203
- Highly positive cutting edge geometry
- Easy cutting action
- Also for machines with low drive power or unstable conditions
- Wedge for fast and reliable clamping of the indexable insert
- Supplied with clamping screws and wrench
- from Ø 160 mm with sealing washers
- **Cutting angle:** Tool cutting edge angle 45°, axial rake angle 20°, radial rake angle -4.5°

Ø 160 to 250 mm with sealing washers

## ATORN® Face and copy milling cutter (OCKX, XCKX, RCKX)

• Can be fitted with octagonal, double-hexagon or round milling inserts

- High feed rates and smooth operation
- Low power requirements due to small number of teeth
- Allows axial and diagonal plunging, well suited to excavation and pocket milling
- Directly-pressed indexable insert with 8 or 12 effective cutting edges
- Stable insert seat, anti-twist protection and defined indexing possible
- Indexable insert with rotational direction index, reliable production and high usability

• Ø 125 mm without internal coolant supply

**ATORN®**  
Performance demands quality

## SARA® Smooth-running 45° face milling cutter

- For ISO milling inserts, SE.. 13T3
- Internal cooling up to Ø 125 mm
- High productivity from finishing to roughing
- Excellent surface finish
- Very broad range of applications
- Universal application for steel, stainless steel and cast iron
- Supplied with clamping screw and wrench
- **Now also with indexable cutting insert for non-ferrous materials**
- **ap max. 6 mm**

**Compatible with: SANDVIK  
Coro Mill® 245, MITSUBISHI  
ASX445, SUMITOMO WGC**

## ATORN® 90° shoulder milling cutter

- For ISO milling inserts, type SDMT 1205 PDR.69
- Exactly 90°
- Internal coolant supply
- General corner milling and face milling
- Drilling by means of circular interpolation
- Insert design with four cutting edges per plate
- Cutting depths up to max. 10.5 mm

## ATORN® 90° end milling cutter

- For ISO milling inserts, type AP.. 0602
- Internal coolant supply
- Easy cutting action due to the positive installation position of the indexable insert
- Tools deliver smooth milling performance
- Axial run-out max. 0.03 mm
- Radial run-out max. 0.03 mm
- For groove milling and side milling
- Precise 90° corner milling
- Supplied with clamping screws and wrench

## ATORN® Spiral flute chamfer milling cutter

- For roughing
- 15°, 30°, 40°, 45°, 60°, 75°
- For ISO milling inserts, type AP.. 1003
- **Internal coolant supply**
- Ideal for pre-machining welded seams
- Manufacturing and indexable insert tolerances allow crank formation
- Supplied with clamping screws and wrench
- **Additional versions with user-defined chamfer angles are manufactured on request (minimum purchase 2 units)**

## ATORN® 90° end milling cutter

- For ISO milling inserts, type AP.. 1604
- Internal coolant supply
- Easy cutting action due to the positive installation position of the indexable insert
- Tools deliver smooth milling performance
- Axial run-out max. 0.03 mm
- Radial run-out max. 0.03 mm
- For groove milling and side milling
- Precise 90° shoulder milling
- Shank according to DIN 1835B
- Supplied with clamping screws and wrench

## ATORN® Spiral flute chamfer milling cutter

- For roughing
- 15°, 30°, 40°, 45°, 60°, 75°
- For ISO milling inserts, type AP.. 1604
- Ideal for pre-machining welded seams
- Indexable insert tolerances allow crank formation
- Supplied with clamping screws and wrench
- Additional versions with user-defined chamfer angles are manufactured on request (minimum purchase 2 units)

## ATORN® End milling cutters 4-10 Power

- For ISO milling inserts, type LN.X 100605 PNR
- Internal coolant supply
- For face milling, shoulder milling, straight-line edge milling and groove milling
- Multi-functional milling tool system with **4 cutting edges** on a **double-sided indexable cutting insert**
- High tool life quantities due to low machining forces
- Special chip shape geometry allows low power consumption due to a large rake angle despite the thick cutting edge
- With the new carbide types, the chip geometry ensures consistently high tool life quantities
- Nickel-plated design for high wear-resistance and increased base body service life

## ATORN® Screw-in milling cutter 4-10 Power

- For ISO milling inserts, type LN.X 100605 PNR
- Internal coolant supply
- For face milling, shoulder milling, straight-line edge milling and groove milling
- Multi-functional milling tool system with **4 cutting edges** on a **double-sided indexable cutting insert**
- High tool life quantities due to low machining forces
- Special chip shape geometry allows low power consumption due to a large rake angle despite the thick cutting edge
- With the new carbide types, the chip geometry ensures consistently high tool life quantities
- Nickel-plated design for high wear-resistance and increased base body service life

## ATORN® 89.5° end milling cutter

- For milling inserts SP.T 0603
- Positive indexable insert basic form
- Four cutting edges per indexable insert
- Also suitable for machines with low drive power
- For excellent surfaces
- Burr-free milling
- **Internal coolant supply**
- Shank according to DIN 1835B
- Supplied with clamping screw and wrench

Particularly cost-effective thanks to 4 cutting edges

## Tangential Milling Cutters

INFO

**• Process reliability due to tangential installation position**

The tangential installation position of the indexable cutting inserts provides some special features. The favourable contact surface and clamping force conditions ensure maximum stability. The tools are therefore extremely reliable even at high cutting performance.

**• Efficiency due to good cutting properties**

The stable indexable cutting inserts have a positive rake angle, resulting in excellent cutting performance and low power consumption of the machine. This significantly increases the service life of the cutting edge. This has a direct and positive effect on tool costs.

**• Cost savings thanks to reduced cycle times**

The ratio of tool diameter to the number of teeth, combined with high achievable feed rates, facilitates enormous removal rates. This results in significantly shorter cycle times, which considerably reduces the total process costs and cost per part.

## ATORN® Tangential shoulder milling cutter 90°

- Process reliability due to tangential installation position
- **8-blade indexable insert for high efficiency**
- Efficiency due to good cutting properties
- Cost savings thanks to reduced cycle times
- For roughing and semi-finishing operations / steel and cast iron machining
- **Infeed depth ap max. = 10 mm**
- up to Ø 125 mm with internal cooling

## ATORN® High-speed milling cutters range

**INFO**
**Exactly 90°**

- Shoulder milling at exactly 90° in steel, cast iron, stainless steel and non-ferrous materials
- Extremely smooth running with low power consumption
- Large selection of base bodies and indexable cutting inserts
- Indexable cutting inserts in four sizes with different corner radii
- Extra-long end milling cutters for deep cavities
- Cutting depths of up to 16.5 mm
- High feed rate due to the large number of thread ridges
- Soft cut due to extremely positive geometry and irregular pitch
- All milling cutters have an internal coolant supply and have been surface-treated

Indexable insert designation	Features	Chip shape levels
<b>ADKX</b>	Universal indexable cutting insert geometry with circumferential protective chamfer for machining steel and cast iron materials as well as stainless steels	 -SR -SR-TR
<b>ADHX</b>	Special ground indexable cutting insert geometry with polished face and sharp cutting edges for machining non-ferrous materials (aluminium, soft copper alloys and plastics)	 -FR-ALC

## ATORN® 90° end milling cutter

- **For milling inserts, type AD..X 06..**
- Easy cutting action due to the positive cutting edge geometry
- Tools deliver smooth milling performance due to irregular pitch
- Precise 90° shoulder milling
- **Internal coolant supply**
- Shank according to DIN 1835B
- Precision-sintered milling inserts (ADKX)
- Precision-ground milling inserts (ADHX) for maximum

### ATORN® 90° roughing spiral flute end milling cutter

- For milling inserts, type AD..X 12..
- Easy cutting action due to the positive cutting edge geometry
- Tools deliver smooth milling performance due to irregular pitch
- Precise 90° shoulder milling
- **Internal coolant supply**
- Shank according to DIN 1835B
- Precision-sintered milling inserts (ADKX)
- Precision-ground milling inserts (ADHX) for maximum accuracy

# THE COMPLETE MACHINING RANGE

**PALBIT**  
Machining tools  
411 pages  
Art.no. 019900 0315

Overview of all free manufacturers' catalogues on page 16/17

High feed-rate milling cutters are not only able to achieve longer service lives and greater removal rates, but also minimise production costs and processing times. It differs from high-speed machining, which is used primarily for finish machining with outstanding surface qualities, in the sense that high feed-rate milling predominantly offers short machining times for roughing. Special high feed-rate geometries were developed for this, which generally possess large radii. Thus the axial feed  $a_p$  is limited somewhat.

Depending on the reduced setting angle  $K$  (Kappa), the radial cutting force " $F_r$ " on the milling cutter and on the machine spindle is significantly reduced, allowing very high tooth feeds to be achieved without issue (Image 1). Tooth feed rates of up to  $f_z = 5$  mm are already used for machining steel. However should the axial force  $F_a$  increase in high feed-rate milling, this is not disruptive as it is absorbed directly by the tool and the machine spindle and in no way causes significant deformation or damage.

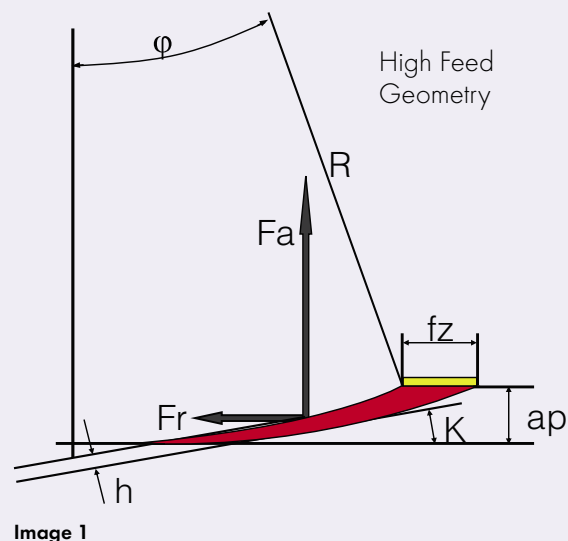

Image 1

Image 2

The special indexable insert geometry for high feed-rate milling helps to minimise the residual material during roughing tasks and thus improves the prerequisites for the subsequent finish machining. Image 2 illustrates the reduced residual material compared to machining with round indexable inserts.

Really quick ...

... with a high feed rate.

**ATORN®**  
Performance demands quality

**ATORN® High feed-rate screw-in milling cutter XDM.**

- For milling inserts XDM.. 09
- 2-edged, small, extremely robust indexable insert
- Positive geometry for easy cutting
- **High material removal rate, even with less powerful machining centres**
- Long service life thanks to nickel-plated design
- **High feed rates achievable**
- Uniform size of indexable cutting inserts

# ATORN® High feed-rate milling cutter XDM.

INFO

The ATORN high feed-rate milling cutter is used for roughing small and medium-sized components. The positive high feed-rate geometry of the standard, small indexable inserts allows for the maximum material removal rate, even on low-output machining centres.

Two different insert geometries in two different types of cutting material ensure that virtually all standard materials used in tool and mould making can be machined.

The Mini system is available as a screw-on milling cutter in diameters 16-42 mm with 2-6 cutting edges, and as a shell-type milling cutter in diameters 40-80 mm with up to 9 cutting edges. All cutting edges have an internal coolant supply. Only one indexable insert size is required for all tool diameters.

### Chip shape levels

SR

ER

### XDMW

- Stable indexable cutting insert geometry for cutting high-strength tempered and tool steels
- Negative protective chamfer with cutting edge rounding

### XDMT

- Soft-cutting indexable cutting insert geometry for reduced cutting forces
- Use in unstable setups
- Particularly suitable for tool machines with low drive output

## ATORN® Milling inserts XDM.. 0903

### • HC4640

Ideal for high feed rates, tough carbide substrate with double PVD coating and outstanding suitability for roughing, with additional TiN layer around circumference for improved wear detection

### • HC4410

Wear-resistant superfine grain substrate for high machining capacity, universally suitable for high cutting speeds in steel at reduced feed rates

### • HC4544

Special superfine grain substrate for high machining capacity with stainless steel materials

## ATORN® High feed-rate milling cutter

INFO

- Roughing of smooth surfaces and cavities with high feed rates
- Machining of cavities by linear and circular interpolation
- Plunge milling even in unstable conditions
- Use of the same CAD/CAM programs as for milling with circular indexable inserts
- Can be used on traditional and modern high-performance machines
- High material removal rates and cost-effective machining of moulds, dies and other components
- Efficient machining even on low-performance machines
- Heat dissipation through the chips, so that heat-sensitive workpieces can be machined

### Chip breaker

#### XCNT

- Universal geometry for a wide range of applications
- Wide negative protective chamfer for increased cutting edge stability
- Ideal for use on high-performance machines

-SN-TR

#### XCNW

- Stable geometry for cutting high-strength tempered and tool steels
- Negative protective chamfer with cutting edge rounding

-SN

#### XCNT

- Soft-cutting geometry for reduced cutting forces
- Used with stainless steel and long-chipping materials
- Particularly suitable for machine tools with low drive output

-EN-TR

## ATORN® High feed-rate milling cutter XCN.

- for milling inserts, type XCN.. 07
- 4-cutting-edge, extremely robust indexable inserts
- Deep cutting troughs with cutting surface topography
- Irregular pitch for low-vibration milling even for high exposed lengths
- Long service life thanks to nickel-plated design
- Wide range of applications

palbit Copy milling cutter TOROMILL 25290 / 25390

- For copy milling, radius cutting and contour milling in die and mould production
- Suitable for diagonal or axial plunge milling thanks to the clearance of the round indexable insert
- Internal coolant supply
- 7° positive setting angle for moderate and heavy machining, long-chipping materials with lower power consumption

- **PFB: Radius accuracy  $\pm 6 \mu\text{m}$**
- **PFR: Surface tolerance  $+ 0 / - 20 \mu\text{m}$ , corner radius  $\pm 8 \mu\text{m}$**
- **Spiralled, stable and extremely sharp cutting edges**
- **Steel and solid carbide shanks**

**Advantages**

- Optimum surface finishes with short and long projection lengths
- Vibration reduction

### Plain ball cutter PHOENIX PFB

### Torus milling cutter PHOENIX PFR

Please contact us for more information, free of charge and without obligation.

## Ball-nose cutter PFB

837

- Radius accuracy  $\pm 6 \mu\text{m}$
- High performance
- Ball cutter for finishing
- 2 cutting edges
- **Spiralled, stable and extremely sharp cutting edges**
- Steel and solid carbide shanks
- Short, long and extra-long designs

### Advantages

- Optimum surface finishes with short and long projecting lengths
- Vibration reduction

### Steel shank

Continued on next page &gt;&gt;&gt;

**Geometries**

**PFB-SP**

- Wide range of applications, from soft steel to superalloy
- Sharp but rigid cutting edge
- Outstanding wear resistance

**PFB-Q**

- 220° full radius
- Effective cutting edge insert
- No straight cutting edge on the outside
- Wall milling without rattling

**PFB-SH**

- Milling of cast iron and hardened steel
- Reinforced indexable cutting insert
- High-grade resistant carbide

**PFB-D**

- Sharp cutting edges especially for milling graphite
- Diamond coatings for adhesive materials

**Qualities / Substrates**

**XP3320**

- for dry machining of steel and stainless steel, as well as cast iron
- for wet machining of heat-resistant superalloy

**XP3225**

- Stable milling of various materials
- Excellent lubrication and wear resistance
- For wet machining of steel and stainless steel

**XP3310**

- Ideal for dry machining of hardened steel and cast iron
- Excellent heat and wear resistance

**XC4505**

- Machining of non-ferrous materials
- Optimal diamond coating for milling graphite

## Torus milling cutter PFR

839

### • Radius accuracy $\pm 8 \mu\text{m}$

- High performance
- High measurement accuracy
- 2 cutting edges
- Steel and solid carbide shanks
- Short, long and extra-long designs

### Advantages

- Optimum surface finishes with short and long projecting lengths
- Vibration reduction

### Steel shank

Geometries

PFR-ST

- Wide range of applications from soft to hard steel
- Positive rake angle
- Excellent sharpness and hardness

PFR-SH

- For milling cast iron, ductile iron and hardened steel
- Ultra-rigid cutting edge with two-dimensional negative chamfer
- For stable machining
- Especially for milling graphite

PFR-D

- Sharp cutting edges especially for milling graphite
- Diamond coatings for adhesive materials

Qualities / Substrates

XP3225

- Stable milling of various materials
- Excellent lubrication and wear resistance
- For wet machining of steel and stainless steel

XP3310

- Ideal for dry machining of hardened steel and cast iron
- Excellent heat and wear resistance

XC4505

- Machining of non-ferrous materials
- Optimal diamond coating for milling graphite

# DRILLING THREADING MILLING

OSG  
Catalogue VI  
1024 pages  
Art.no. 019900 0208

Overview of all free manufacturers' catalogues  
on page 16/17

## ATORN® Countersinking mill, adjustable

- **Adjustable from 10° to 80°**
- Universal indexable insert countersinking mill for chamfering, deburring and countersinking in fixed operating conditions. Cannot be used on drilling machines
- Stable, smooth operation
- Straight shank with driving planes in accordance with DIN 1835B in tolerance zone h6
- Scale tolerance  $\pm 2.5^\circ$ , please use a pre-setting device for precise adjustment
- Supplied with clamping screws and wrench

### For ISO indexable inserts, type TC.. 1102

- incl. cartridge

## ATORN® Countersinking mill with 2 cartridges, adjustable

- **Adjustable from 10° to 80°**
- Universal indexable insert countersinking mill for chamfering, deburring and countersinking in fixed operating conditions. Cannot be used on drilling machines. Stable, smooth operation
- Straight shank with driving planes in accordance with DIN 1835B in tolerance zone h6
- Scale tolerance  $\pm 2.5^\circ$ , please use a pre-setting device for precise adjustment
- Supplied with clamping screws and wrench

Cartridge for SC.. 1204..

Cartridge for TC.. 16T3..

### Including two cartridges, one cartridge each for TCMT 16T3.. and SCMT 1204..

## ATORN® Disc milling cutters

- Three cutting edges
- Fixed width
- Generates a slight roof shape at the base of the groove
- Screw-in indexable inserts
- For slotting, cutting and groove milling
- Supplied with clamping screws

Axial angle -3°, radial angle -12°

## Push broaches (keyway broaches)

- For manufacturing true-to-size and precisely centred keyways in accordance with DIN 6885
- Can be used on normal workshop presses (hand press or hydraulic press); no special machinery required
- Low tooling time
- Good surface finish on machined workpieces
- Manufacturing time for one keyway only approx. 1 minute
- Broaches supplied with inserts for achieving the cutting depth
- Special alloy HSS steel for machining any materials with a hardness of up to 34 HRC
- Broaches with other rake angles are available on request for machining solid or very soft materials.
- Square and multi-purpose four square broaches are available on request.

### From size 32 x 102, guide bush without collar

#### Use:

1. Slide guide bush into workpiece bore and insert broach until the first tooth on the workpiece is standing upright
2. Lubricate broach
3. Push broach in approx. 1/3
4. Briefly release plunger and push broach in fully
5. Clean broach and fit insert for the second pass
6. Repeat broaching operation

> 700 mm	0,75 small	> 500 mm	0,75 - 1,25 TPI.plus

in bold = catalogue version

### Correct toothing

Selecting the correct tooth pitch is essential to achieve the best possible cutting results:

- The tooth pitch is calculated from the working length of the saw band.
- Selecting too low a pitch can cause deviations in cutting, as chips may block the cutting teeth and force the saw band off its cutting line.
- Selecting too high a pitch can cause teeth to become bent, as the cutting pressure on individual teeth is too large.
- At least three teeth should be engaged to achieve cost-effective results.

### Sawing pipes and profile sections

150										0,75/1,25 pos	0,75/1,25 pos	0,75/1,25 pos
200										0,75/1,25 pos	0,75/1,25 pos	0,75/1,25 pos

in bold = catalogue version

If two or more pipes need to be cut alongside one another, take into consideration the doubled wall thickness when using the table.

Critical factors in choosing the correct tooth pitch:

- Sawing pipes and profile sections in layers and bundles
- Sawing pipes and profile sections individually

\* = for high cutting speeds (from 1000 m/min) always use extra-tough saw blades!  
When ordering, please indicate: machine speed or cutting speed and material to be cut.

All blades are laterally bevel-ground (hollow grinding).  
All sizes from Ø 200 mm and very slim blades have a borehole collar for extra stability.  
Accuracy, tooth form and lateral bevel grinding correspond to DIN 1840.

### DIN 1837 A fine-toothed with Type A double helical tooth

- Straight teeth with relatively small tooth pockets
- For thin-walled workpieces and smaller cutting depths
- Ideal for machining brittle, short-chipping materials

### DIN 1838 B coarse-toothed with Type B curved tooth

- Curved teeth with relatively large tooth pockets
- More universal than DIN 1837 A thanks to improved chip formation and increased chip space
- For stronger material and greater cutting depths

### DIN 1838 C coarse-toothed with Type C curved tooth

- High-performance toothing (HZ) with taper tap and regroover
- The taper tap is 0.15-0.3 mm higher than the regroover and is tapered on both tooth corners.
- Thus both teeth share the task of machining.
- Ideal for separating workpieces with low to medium strength
- Excellent chip management is achieved by the chip-separating tooth form.

## Manufacturing accuracy according to DIN and ISO for HSS metal circular saw blades

**Diameter tolerance according to ISO**

## SARA® Metal circular saw blade, precision version

200150....

200151....

- Choose the correct tooth pitch in relation to the materials to be cut
- Feed, in relation to the materials to be cut and the selected tooth pitch
- Rotational speed, in relation to the materials to be cut and the saw blade diameter
- The data relates to the circular saw blades with standard surface. Surface coatings can increase the feed and revolution values.
- When cutting ensure the saw blade is correctly tensioned, as well as sufficient cooling, correct machine operation and optimum condition of the saw blade.
- Please adjust these guideline values according to clamping operation and machine set-up!

Overview of all free manufacturers' catalogues on page 16/17

## Calculation of HSS-E milling cutter

### Note:

- Please use the tables on pages 20-14 to 20-17 to assign the materials to be machined.
- All milling specifications apply to a rigid setup, including clamping, sufficient machine output and applications of coolant.
- Please adjust these guideline values according to clamping operation and machine set-up!
- The feed (Vf) should be halved for milling in long version.

### 1. Table

Please see Table 1 for the cutting speed of the respective material.

ISO	Material	Hardness HB	Tensile strength N/mm <sup>2</sup>	Cutting speed Vc m/min.
P	magnetic, soft steel	< 120	< 400	40

## ATORN® HSS-E-PM-milling cutter

## Groove milling

- Please adjust these guideline values according to clamping operation and machine set-up!
- The guide values apply for the TiAlN-coating version; for uncoated tools the cutting speeds must be reduced by 20-30%.

## ATORN® Mini end milling cutter, Mini torus milling cutter RockTec 52

• The lower Vc values apply respectively for long clearances and the smaller diameter range; the higher Vc values for short clearance lengths and the larger diameter range.  
This also applies for the specified ap max. values.

• Please adjust these guideline values according to clamping operation and machine set-up.

## Calculation: solid carbide end milling cutter

### Note:

- Please use the tables on pages 20-34 to 20-35 to assign the materials to be machined.
- All milling specifications apply to a rigid setup, including clamping, sufficient machine output and applications of coolant.
- Please adjust these guideline values according to clamping operation and machine set-up!
- The feed (Vf) should be halved for milling in long version.

### 1. Table

Please see Table 1 for the cutting speed of the respective material.

ISO	Material	Hardness HB	Tensile strength N/mm <sup>2</sup>	Cutting speed Vc m/min.
P	magnetic, soft steel	< 120	< 400	150
	Structural steel, steel for case hardening	< 200	< 700	120
	Carbon steel, unalloyed	< 250	< 850	96
	Alloyed steel	< 250	< 850	96
	Alloyed steel, hardened and tempered	250-350	850-1.200	72
	Alloyed steel, hardened and tempered	> 350	> 1200	48
M	Good machinability	< 250	< 850	96
	austenitic	< 250	< 850	72
	ferritic, austenitic	< 300	< 1000	60
K	with lamellar graphite	< 150	< 500	120
	with lamellar graphite	150-300	500-1.000	96
	with spheroidal graphite, malleable cast iron	< 200	< 700	120
	with spheroidal graphite, malleable cast iron	200-300	700-1.000	60

### Cutting speed and feed correction factors

ae	10%	20%	50%	100%
Factor for Vc	1.3	1.1	1	0.85
Factor for fz	1.5	1.3	1	0.8

## Solid carbide high-performance end milling cutter

### Note:

The recommended cutting data are guide values for conventional roughing and assume stable machine conditions, low-vibration workpiece clamping and the application of suitable cooling lubricant. The cutting speed Vc can be increased by 20% for finishing. For full slot milling we recommend reducing the cutting speed Vc by approx. 15% and the feed Vf mm/min by 30%.

## ATORN® Mini radius milling cutter RockTec 52

- The lower Vc values apply respectively for long clearances and the smaller diameter range; the higher Vc values for short clearance lengths and the larger diameter range. This also applies for the specified ap max. value.
- Please adjust these guideline values according to clamping operation and machine set-up!

**Feed correction f2 = 1**

Roughing  $a_e = 0.1 \times D$   $a_p = \max. L1$   
Finishing  $a_e = 0.1 \times D$   $a_p = \max. L1$

**Feed correction f2 = 0.6**

Roughing  $a_e = 0.1 \times D$   $a_p = \max. L1$   
Finishing  $a_e = 0.3 \times D$   $a_p = \max. L1$

**Feed correction**

1 x D bore depth and then longitudinal slot milling  $f2 = 0.3$  Drilling  $f2 = 0.5$  Milling

$a_e$  = radial cutting depth  
 $a_p$  = axial cutting depth  
 $D$  = milling cutter diameter  
 $L1$  = cutting edge length

The respective feed rate is calculated as follows:  
 $V_f = f_z \times z \times n \times f2$

## ATORN® End milling cutter Ultra-N

• The specified values apply to  $a_e < 0.5 \times D$  and  $a_p 1 \times D$ .

Cooling = emulsion

 249301.... 249307.... 249352....  
 249302.... 249308.... 249355....  
 249303.... 249309....  
 249304.... 249350....

### Correction examples:

Correction factor  $f_z$  for full slot ( $a_e > 0.5 \times D$ ) = 0.7

Correction factor  $f_z$  for  $a_p < 1 \times D$  = 1.2

**Long version:** please correct  $f_z$  values by factor 0.8

**Uncoated tools:** please reduce  $V_c$  values by 10%!  $f_z$  values remain the same.

• Please adjust these guideline values according to clamping operation and machine set-up!

Standard cut	2	3	3	3
Aluminium cut	ALU	13	Alu	9

#### Designations of carbide metal rotary burs

Type	ATORN	DIN (as per 8033)	BIAX	Pferd	Lukas
Cylindrical shape without end cut	ZYA	ZYA	TCA	HMA	HFA
Cylindrical shape with end cut	ZYAS	ZYA...S	TCB	HMA...ST	HFAS
Ball nosed cylinder shape	WRC	WRC	TCC	HMC	HFC
Ball shape	KUD	KUD	TCD	HMF	HFD
Oval shape	TRE	TRE	TCE	HMO	HFE
Ball nosed tree shape	RBF	RBF	TCF	HMH	HFF
Pointed tree shape	SPG	SPG	TCG	HMK	HFG
Flame shape	H	-	TCH	HMB	HFH
Ball nosed cone shape	KEL	KEL	TCK	HML	HFL
Cone shape	SKM	SKM	TCI	HMG	HFM
Inverted cone shape	WKN	WKN	TCN	HMW	HFN

#### Speed recommendation

		Head diameter				
		3 mm	6 mm	10 mm	12 mm	16 mm
Material	max. speed r/min	90.000	65.000	55.000	35.000	25.000
Aluminium Plastic	Speed range	60.000 - 80.000	15.000 - 60.000	10.000 - 50.000	7.000 - 30.000	6.000 - 20.000
	Optimum speed	65.000	40.000	25.000	20.000	15.000
Brass, copper, copper alloy, cast iron, bronze	Speed range	45.000 - 80.000	22.500 - 60.000	15.000 - 40.000	11.000 - 30.000	9.000 - 20.000
	Optimum speed	65.000	45.000	30.000	25.000	20.000
Steel	Speed range	60.000 - 80.000	45.000 - 60.000	30.000 - 40.000	22.500 - 30.000	18.000 - 20.000
	Optimum speed	80.000	50.000	30.000	25.000	20.000
Hardened steel, stainless steel, Titanium, nickel	Speed range	60.000 - 80.000	30.000 - 45.000	19.000 - 30.000	15.000 - 22.500	12.000 - 18.000
	Optimum speed	80.000	40.000	25.000	20.000	15.000

## ATORN® Mini end milling cutter, mini torus milling cutter RockTec 65

- The lower Vc values apply respectively for long clearances and the smaller diameter range; the higher Vc values for short clearance lengths and the larger diameter range. This also applies for the specified ap max. value.
- Please adjust these guideline values according to clamping operation and machine set-up!

## ATORN® Thread milling inserts

**ATORN thread milling cutters are specially designed for use on CNC milling machines and machining centres which have 3-axis control with helical interpolation.**

259001 ....  
259002 ....  
259003 ....

### Advantages and application

- External and internal threads
- For through-hole and blind bore threads
- Synchronous and up-cut milling and change of the axial feed direction enables production of straight and conical threads and of all standard thread variants
- Thread production with varying tolerances
- Optimal clamping
- Short chips
- Low cutting pressure

### Carbide quality AMT7

- TiAlN-coated ultra-fine grain quality
- for universal applications in all materials at medium to high cutting speeds

ISO		Cutting speed Vc m/min	Feed f mm/rev
P	Carbon steel	115 - 280	0.05 - 0.15
	Alloyed steel	130 - 280	
	High-alloy steel	105 - 180	
	Cast steel	150 - 190	
M	Stainless steel	130 - 190	
K	Grey cast iron	80 - 170	
N	Non-ferrous metals, aluminium	180 - 34	

## CNC Programming for internal threads

Upwards milling operation  
(Programme is for use on CNC machining centres)

$$A = (D_0 - D) / 2$$

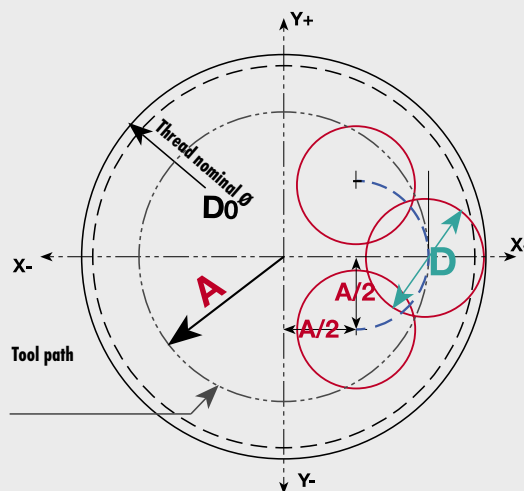

A = radius of the tool path  
D<sub>0</sub> = thread nominal Ø  
D = cutting Ø

### Standard Programming

```
G90 G00 G54 G43 H1X0 Y0 Z10 S--
G00 Z-(thread depth)
G01 G91 G41 D1 X(A/2) Y(A/2) Z0 F--
G03 X(A/2) Y(A/2) R(A/2) Z(1/8 x pitch)
G03 X0 Y0 I(A) J0 Z(Steigung)
G03 X-(A/2) Y(A/2) R(A/2) Z(1/8 x pitch)
G01 G40 X-(A/2) Y-(A/2) Z0
G90 X0 Y0 Z0
```

### Example

M32 x 2 (thread depth 18 mm)  
Tool holder: SR0021 H21  
(Cutting Ø 21 mm)  
Insert: 21 I 2,0 ISO  
A = (32 - 21) / 2 = 5.5  
produces the following Programming:  
G90 G00 G54 G43 H1X0 Y0 Z10 S2800  
G00 Z-18  
G01 G91 G41 X2.75 Y2.75 Z0 F85 D1  
G03 X2.75 Y2.75 R2.75 Z0.25  
G03 X0 Y0 I-5.5 J0 Z2  
G03 X-2.75 Y2.75 R2.75 Z0.25  
G01 G40 X-2.75 Y-2.75 Z0  
G90 G0 X0 Y0 Z0

### Internal thread

### External thread

## Deburring tool Orbitool® for internal machining

250010.... 250011....

### 1. Rotational speed rpm

The tool rotates in a clockwise direction. The higher the rotational speed, the more material is removed. Limiting factors include the rotational speed of the machine spindle and the desired surface quality. The recommended rotational speed for ORBITOOL® DEBURRING TOOLS is between 2000 and 8000 rpm.

A lower rotational speed reduces vibrations and produces a better finish. Harder materials require higher rotational speeds.

### 2. Feed rate

The feed rate determines the material removal rate and the form of the cutting edges of the intersecting boreholes. For softer materials, e.g. aluminium, smaller feed rates produce chamfers instead of a radius. Feed rates of 0.05 to 0.6 mm per circular motion of the tool are recommended.

### 3. Rotational speed of the circular motion

There are three options for moving ORBITOOL® DEBURRING TOOLS in the workpiece bore:

Recommended rotational speed range for the circular motion: 20 - 100 min<sup>-1</sup>

The circular motion diameter calculation is:

$$D = Dh - Ds$$

D = diameter of the circular motion

Dh = diameter of the bore

D = ORBITOOL® DEBURRING TOOL end milling cutter diameter

### Note

The abrasion capacity of the tool increases with the stiffness of the tool clamping. The flexibility of the tool shank allows almost universal application. However, if the shank lengths of the ORBITOOL® DEBURRING TOOL are too short, particularly with smaller shank diameters, this may cause permanent deformation of the tool shank. For delicate machining processes, sensitive surfaces or insufficient shank lengths, a flexible spacer (optional) can be used to remedy this. Threaded bores can also be easily deburred. The protective disc of the milling tool protects the thread profile from damage.

Recommended tooth feed fz  
with  $a_e = 0.6 \times d1$

## ATORN® Disc milling cutter

• The average **chip thickness hm** should be at least 0.1 mm to prevent the indexable inserts becoming worn quickly. For groove milling the chip thickness is much smaller than the feed per tooth. Thus the ratio between **groove depth Ar** and **milling cutter diameter D** must be observed. The average chip thickness and the corresponding minimum feed rate is illustrated in the following diagram.

262600....

262610....

Example: milling cutter Ø D 160 mm  
Groove depth Ar = 8 mm  
 $Ar / D = 0.05$   
**Result: Feed per tooth fz = 0.4 mm**

Technical information, usage recommendations		1059

## Summary of icons used for drilling tools

INFO

## Cutting material

**HM** e.g.: carbide metal**CBN** e.g.: cubic boron nitride**PKD** e.g.: polycrystalline diamond

## Coating

**TiN** Titanium-nitride coating**TiCN** Titanium-carbo-nitride coating**TiAlN** Titanium-aluminium-nitride coating

## Standard

**DIN 4951-4965** Complies with DIN 4951 - 4965

## Shank design

 Corresponds to straight shank

## Thread

**M** e.g. metric thread**MF** e.g. metric fine thread**BSW** e.g. British Standard Whitworth

## Thread angle

 Thread angle is 55°

## Coolant design

 With internal coolant supply

## Cutting data

 Further information such as cutting data recommendations is available in the technical appendix

... optimal chip control.

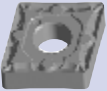

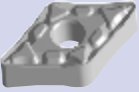

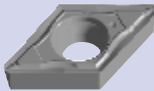

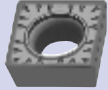

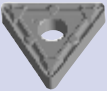

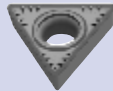

Ground sharp ...

## ISO indexable cutting inserts ceramic

Ceramic indexable cutting inserts are made of an inorganic substance.

They are die pressed and sintered using very fine pure raw material.

The ceramic indexable cutting inserts are completely compacted in this process, which means they have:

- **Resistance to breakage and wear**
- **Longer tool service life due to outstanding wear resistance**
- **Accurate cutting and exceptional surface roughness**
- **Greater cutting speed compared to carbide indexable cutting inserts**

Other geometries, edge preparations and coatings are available on request.

## Technical Information CBN Indexable Cutting Inserts

**INFO**

CBN (polycrystalline cubic boron nitride) does not occur naturally. It is a synthetic material that is manufactured through a process of high temperature and pressure. When CBN cutting edges are soldered to a carbide insert, this creates a high-performance cutting tool. CBN indexable cutting inserts are **brilliant for finishing and semi-finishing hardened steels (with 45 to 68 HRC)**, as well as hard cast iron and heat-resistant superalloys.

### Qualities

PBY 603	PBY 620
low CBN content with medium grain size and ceramic binding	minimal CBN content with medium grain size and ceramic binding
high wear/abrasion resistance	improved crater/side wear resistance with an exceptionally balanced toughness
for continuous and partially interrupted cutting of hardened steel (H01-H10)	for moderate to severely interrupted cutting of all hardened steels (H10-H20)
finishing of abrasive, high-strength cast iron	
also suitable for machining heat-resistant superalloys (S10)	

### Geometry selection

The indexable insert geometry and the edge preparation is extremely important in hard turning, as it has a significant impact on the tool service life and productivity. The PALBIT product range includes standard and WIPER indexable cutting inserts.

The standard indexable insert produces the lowest cutting forces and has the lowest stability requirements, while the WIPER indexable cutting insert creates high productivity and outstanding surface quality.

A large corner radius guarantees greater edge strength and thus ensures a longer service life of the indexable cutting insert. For this reason it is advised to select the greatest permissible corner radius for the respective process requirements.

WIPER indexable cutting inserts provide two options in process improvement:

- improved surface quality with standard cutting data
- consistent surface quality with considerably higher feed rate.

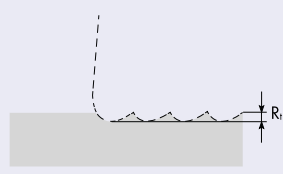

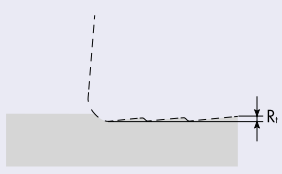

### Selection of cutting edge preparation

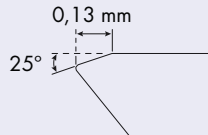

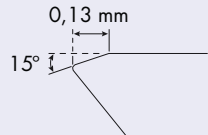

Defining the correct cutting edge preparation is the key criterion for the stability and service life of the cutting edges.

Selection is required to produce the best economic result.

### Edge preparation S

- with chamfer and edge rounding
- first choice for hard turning parts
- stronger cutting edge, with greater resistance to nicks and breaks
- generates a uniform surface quality
- critical for uninterrupted cutting and when using large cutting depths
- The feed rate must be greater than the edge rounding.

Standard (r = 0.8 mm)	WIPER (r = 0.8 mm)
	
<b>Surface roughness Ra = 0.81 µm</b>	<b>Surface roughness Ra = 0.42 µm</b>

S2513	S1513
	
<b>for general machining</b>	<b>for stable continuous machining</b>

## Technical Information PKD Indexable Cutting Inserts

INFO

PKD (polycrystalline diamond) is a composite of diamond particles sintered with a metallic binding agent, which form one of the hardest and most wear-resistant materials for cutting tools.

Its development was significant for the **machining of non-ferrous materials such as aluminium with high silicon content, metal matrix composites (MMC) and carbon-fibre reinforced plastics (CFRP)**.

### Quality

PDP410	
general applications	graphite and graphite composite
fine finishing	wood composite
<14% aluminium silicon alloy	raw ceramic
automotive industry	copper alloy

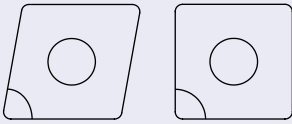

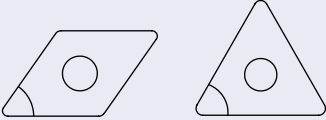

### Geometry selection

Insert geometry and corner radius are crucial to service life and productivity in turning work.

#### The corner radius of the indexable cutting insert is an important performance parameter:

- A smaller corner radius must be selected for good chip breaking: 0.2 - 0.4 mm
- A large corner radius: 0.8 - 1.2 mm produces a greater surface quality and narrower chips, whereby the crater wear in hard turning is reduced.
- Machining with greater corner radius and smaller cutting depth results in lower entry and exit force.

**In general, a greater corner radius ensures increased cutting stability and thus an increased service life. For this reason it is advisable to use the largest-possible corner radius according to the specific requirements.**

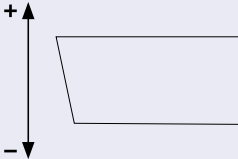

Finishing and Semi-finishing	
Special surface and tolerance requirements apply in these cases.	
Roughing	
The following formula is recommended to calculate the minimum corner radius in relation to the feed for roughing:	
Insert shape	Formula
	Radius > 1.6 x feed per rev.
	Radius > 2.5 x feed per rev.

### Selection of cutting edge preparation

Choosing the correct cutting edge preparation is the key criterion for the stability and service life of the cutting edge. It determines the degree of efficiency.

#### Cutting edge preparation

PKD: Cutting edge preparation F-type:

<p>Cutting forces Cutting strength</p> 	<p><b>F-standard preparation without honing - Standard</b></p> <ul style="list-style-type: none"> <li>• sharp cutting edge</li> <li>• standard/cutting edge preparation for aluminium or other non-ferrous materials.</li> </ul>
---	--

- **Polycrystalline diamond** (composite cutting material) with carbide base, good cutting edge sharpness and low cutting pressure with narrow tolerances. Lower wear resistance with increased toughness.

## ATORN® DLOCK coolant supply and outlet

INFO

### Coolant supply

The DLOCK system offers various coolant supply options. Not only are there two inlets on the underside of the holder (1x G1/8 inch and 1x M6 for transition to VDI holder), there is also another on the rear of the square (1x G1/8 inch). The coolant system can thus be connected with the greatest flexibility.

### Coolant discharge

The coolant discharge is targeted at the primary cutting edge, thus guaranteeing optimum cooling without the risk of a thermal shock effect.

## ATORN® Tool holders, negative PCLN

- **PCLN R/L 95°**
- Setting angle 95°, for negative 0° rhombic indexable inserts, 80° point angle
- **Use:** Longitudinal turning and facing

## ATORN® Miniature turning range with indexable cutting inserts, positive

- **Application:** for miniature turning from  $\varnothing$  4.8 mm with CD.. - CP.. - WC.. - VC.. Indexable cutting inserts
- Wide range of boring bars in various materials: **steel, HSS, solid carbide**
- **ISO ultra-small indexable cutting inserts** of the latest generation

Miniature turning range with indexable cutting inserts

### Boring bar, positive SCLD offset

## ATORN® Boring bar, positive SCLC

Figure shows right-hand boring bar, left-hand boring bar is mirror image

- **SCLC R/L 95°**
- Setting angle 95°, for positive 7° rhombic indexable inserts, 80° point angle
- Use: longitudinal turning, **very well suited to small bores**
- **With internal cooling, C04 and C05 without internal coolant supply**
- **D min from 5.00 mm**
- Note: right-hand boring bar = left-hand indexable insert, left-hand boring bar = right-hand indexable insert

## ATORN® Miniature boring bars holder

NEW

- Miniature turning from Ø 4.8mm
- for CD., CP., DC., WC., and VC.. Indexable cutting inserts
- high flexibility thanks to quick-change system
- **internal coolant supply**
- incl. stop/fixing pin

**Turning tool**

HM

- Shanks made from non-alloy steel (700 - 800 N/mm<sup>2</sup> in strength)
- Finely ground face and flank surfaces
- Fitted with ISO solid carbide cutting inserts according to DIN 4950
- **P20**  
**P25/P30** multi-range quality  
**K10/K20** multi-range quality
- Unit prices when purchased in PU
- Other qualities can be found in our webshop

Illustrations show RH version

**Straight turning tool, right-hand, DIN 4971 - ISO 1**

- Left-hand version available on request

## ATORN® Precision thread cutting

INFO

The threading inserts are clamped in the holder using Torx screws; you can use virtually all the tool holders available on the market.

Affordable thread turning for external and internal threads, especially on CNC processing machines.

### Ground version

Version ground on all sides with **highly accurate profile geometry**

- Guaranteed quality due to complete control
- Maximum precision possible
- Chip breakers ground from solid material

### Ground version with sintered chip breaker

- Controlled chip breaking
- Longer service life

### Threading inserts product range

	ATORN®
Partial profiles, 60°	•
Partial profiles, 55°	•
ISO metric thread	•
UN full profile thread (Unified)	•
BSW British Standard Whitworth thread	•
NPT American standard taper pipe thread	•
Trapezoidal thread according to DIN 103	•
Round thread according to DIN 405	•
PG (DIN 40430) armoured pipe thread	•
Saw-tooth thread (DIN 513)	•
Type Z inserts, 4.1 mm, for Sandvik holders	•
Mini thread	•

### Other threading inserts are available on request:

- ACME American trapezoidal thread
- Oil thread
  - API - round
  - API - V 0.040
  - API - V 0.038 R
  - API - V 0.050
- BSPT British tapered pipe thread
- NPTF
- STUB ACME
- UNJ
- Multiple thread ridge inserts and thread based on drawings available on request

### Multiple thread ridge inserts available on request

### Recess turning inserts

ISO standard thread turning holder can also be used with recess turning inserts for grooving!

### Application areas of the available carbide qualities

Quality	ISO	Application area
<b>HC 5625</b> PVD TIN	P15-P35	For non-alloyed and alloyed steel at low to medium cutting speeds
<b>HC 5615</b> PVD TIN	P10-P25 K10-K20	For machining non-alloyed, alloyed and stainless steels, super alloys, hardened steels, cast iron materials and non-ferrous metals at medium cutting speeds
<b>HC 5630</b> PVD TIAlN	P20-P40 K20-K30	For machining non-alloyed, alloyed and stainless steels, super alloys, hardened steels and cast iron materials at medium to high cutting speeds
<b>HC 5640</b> PVD TIN	P30-P50 K25-K40	For non-alloyed and alloyed steels at low cutting speeds, particularly suitable for stainless steels
<b>HC 5620</b> PVD	M10-M20 K05-K20 N10-N20 S10-S20	For stainless steel, cast iron, titanium, non-ferrous metals and high-temperature alloys
<b>HC 5110</b> PVD	H01-H20	For hardened steels, cast iron, super alloys up to 62 HRc

## ATORN® Grooving inserts

- For use on thread cutting holders
- Low tool costs, since existing holders can be used
- One tool holder for grooving and thread cutting
- Three cutting edges, precision-ground
- HC 5640 coated
- **Supplied without spacer (spacer set), please order separately!**
- **Boring bars with insert size 16 without spacer cannot be used.**

Drilling and turning ...

... with a single tool.

**ATORN**<sup>®</sup>  
Performance demands quality

## Model descriptions GROOVE

**INFO**

The new range captivates with 4 models for a wide range of uses and applications.

The **APU40G** is an extremely reliable all-rounder for general applications using steel, stainless steel and cast iron. The high edge stability of the substrate is optimally protected by the customised TiAlN-PVD coating. Protection from the temperature influences that inevitably occur during machining.

The tougher **APM45G** has the strongest substrate in the range and was specially developed for use with austenitic and stainless steels in unstable conditions. The PVD-TiAlN coating guarantees a high degree of machining reliability with excellent toughness even with materials that are difficult to machine, which is reflected in its process reliability.

The **ACP20G** rounds off the range, for maximum cutting speeds and excellent protection against diffusion wear. The TiCN-Al<sub>2</sub>O<sub>3</sub>-CVD coating protects this medium-tough variant from the excessive temperature influences that occur during recess turning in particular.

The uncoated **AWN16G** is a special substrate for machining non-ferrous materials and aluminium.

### APU40G (universal model)

- HC-P30
- HC-M25
- HC-K30
- HC-S30

**Composition**

Co 9%,  
Composite carbides 2%,  
WC balance

**Grain size**

0.7 - 1 µm

**Hardness**

HV<sub>30</sub> 1590

**Coating**

PVD TiAlN

**Recommendation for use**

Excellent and universal multi-grade model for use in steel, stainless steel, cast iron and heat-resistant chrome nickel alloys (killed)

**Toughness**

1 2 3 4 5 6 7 8 9 10

**Wear resistance**

1 2 3 4 5 6 7 8 9 10

ISO	Materials group	Strength/ Hardness N/mm <sup>2</sup>	Material example chemical	Material number	Cutting speed Vc m/min

## Overview of chip breakers GROOVE

The new **AD** (ATORN double) chip breakers are designed with dual cutting edges and are suitable for a depth of 24 mm.

The name **AE** (ATORN single) refers to a single cutting edge design and is suitable for punching depths of more than 24 mm.

The **chip breaker M** is suitable for universal use and for all materials. Thanks to the negative edge rounding, it is also suitable for use with high-alloy materials.

The **chip breaker F** was developed to guarantee very soft cutting. This is particularly important for thin-walled materials or pipes. Despite this positive cutting property,

it has very strong edges and offers excellent chip control even at low feed rates. Another positive effect of this chip breaker is the low tendency towards built-up edges, which can offer significant advantages particularly for stainless steel materials.

In addition to the chip breaker F the **chip breaker ET** is a further alternative and a problem-solver in steel machining. Thanks to its high processes reliability, it is the first choice even for the toughest materials like titanium and duplex materials in conjunction with the SP45MG.

The **chip breaker TR** was developed for recess turning, grooving and parting-off. Optimum chip control is guaranteed, even with low infeed.

The rotating **chip breaker R** is designed for radius indexable cutting inserts and allows chip control with various materials and also stabilises cutting.

Completing the range is the **chip breaker LC**, which was developed for aluminium.

### Chip breaker M-medium, universal

- Recessing insert with slightly negative edge rounding
- Also suitable for high-strength steel
- Suitable for almost all areas of application
- Main application area steel and cast iron

### Chip breaker F-fine

- Excellent, very soft cutting geometry with very low cutting forces
- For materials with low minimum tensile strength
- Ideal for thin-walled components
- High cutting edge stability with ideal chip control even at low feed rates
- Low tendency to form built-up edges

### Chip breaker ET-extra

- Specially for stainless materials
- "Problem-solver" for materials that are difficult to machine such as titanium or duplex
- Extremely soft cutting

### Chip breaker TR-turning

- Special chip breaker for parting-off and recess turning
- Outstanding chip control for longitudinal turning
- For all steel and stainless materials

### Chip breaker R-round

- Chip breaker for recess turning and ramping
- Rotating chip breaker for optimal chip control
- For all steel and stainless materials

**M, MU and MN chip breakers** are used in the **ASS** (ATORN Single Small) system. These refer to medium chip breakers, universal medium chip breakers, and chip breakers for medium non-ferrous metals.

### Chip breaker M-medium

- Negative protective chamfer
- First choice for steel materials with high tensile strength
- Suitable for steel and grey cast iron
- Suitable for grooving and parting-off, as well as longitudinal turning

### Chip breaker MU medium-universal

- Recessing and recess turning
- Outstanding chip control
- Suitable for steel and cast iron

### Chip breaker MU medium-universal

- Recessing and recess turning
- Outstanding chip control
- Suitable for steel and cast iron

### Chip breaker MN, for aluminium machining

- Highly-positive chip breaker with sharp cutting edge finish
- Highly-polished chip breaker surface
- Maximum reduction of edge build-up

## ATORN® Recessing inserts AD neutral GROOVE

- The feed rates must be adjusted to the respective cutting edge width
- Cutting edge accuracy  $W \pm 0.02$  mm
- AD = double-edged cutting insert **max. 24 mm punching depth**
- AE = single-edged cutting insert **punching depth can be extended up to 50 mm depending on blade overhang**

### Chip breaker M - medium, universal

- For grooving
- Recessing insert with slightly negative edge rounding
- Suitable for almost all areas of application
- Main application area steel and cast iron

## ATORN® Recessing inserts ASS GROOVE

- The feed rates must be adjusted to the respective cutting edge width
- Cutting edge accuracy  $W \pm 0.02$  mm

### Chip breaker M - medium

- For grooving
- Negative protective chamfer
- First choice for steels with high tensile strength
- Appropriate for steel and grey cast iron
- Appropriate for grooving, parting-off and longitudinal turning operations

**ATORN®**  
Performance demands quality

**ATORN® DED grooving system****INFO**

Recess turning tools with three-fluted indexable inserts

**ATORN® DED**

- 3-cutting-edge system
- Quick, positionally accurate changing of blades
- For punching depths up to 6 mm depth and 8 mm width
- For grooving and parting-off, for grooves in accordance with DIN 471/472, for axial grooves
- More cost-effective with 3 cutting edges
- Soft cutting with modern coatings and ground chip breakers

**ATORN® DED grooving system holder**

- For three-edged recessing inserts
- Solid tool holder made from 42 CrMo4V, approx. 1,300 N/mm<sup>2</sup> Hardened and tempered
- Powerful clamping element guided by two cylindrical pins

**Holder type R/L.. 1-D**

- Punching depth up to 4 mm
- T<sub>max.</sub> reduced for workpiece Ø > 40 mm

## ATORN® DED grooving system inserts

1088

### • 3 cutting edges

- Sintered version with incircle Ø 13.2 mm
- Positive, ground cutting geometries
- Extremely easy cutting action
- Low cutting forces
- Parting-off insert with chip breaker
- High thermal and chemical stability
- Low friction coefficient
- Can be used under some circumstances for dry machining
- Can be used universally with almost all materials
- Versions for parting-off, grooving, radius recessing, copy turning and precision turning
- **Material: HC 8620 ISO PMKNS fine grain carbide, TiAlN-coated**

### For retaining grooves in accordance with DIN 471 / 472

**palbit**  **Grooving and parting-off system MINI**

- Two cutting edges on each indexable cutting insert for extremely small-scale grooving and parting-off tasks
- Practically the entire spectrum of operations involved in grooving and parting-off work up to 2.0 mm is covered with a minimum of equipment.
- The design of the insert seat in the holder, clamped in place by means of a TORX screw, ensures a high level of repeatability and positioning precision of the cutting edge, and enables all of the indexable cutting inserts listed below to be used.

**Grooving and parting-off up to 2 mm**

# THE COMPLETE MACHINING RANGE

**PALBIT**  
Machining tools  
411 pages  
Art.no. 019900 0315

Overview of all free manufacturers' catalogues  
on page 16/17

Three-ribbed tooting

## ATORN® MINI-CUT

The exchangeable carbide blades are screwed onto the front using the tried and tested three-ribbed tooting.

- Best repetition precision with easiest handling
- Best possible absorption of torque forces
- Very precise fixing of position of the blade at the centre of rotation

## ATORN® Tool holder MINI-CUT

- **With internal cooling**
- For recess turning, internal turning and thread cutting (internal) from  $\varnothing 7.8$  mm
- Spare clamping screws available on request
- **FLE XO** clamp mounting, variable clamping range from ... to ... mm (see table Clamping length = „L4“)
- **FLE XO** clamp mounting for HM cutting inserts R/LS 08 and R/LS 11
- Suitable **FLE XO** steel clamp mounting

**SOLID CARBIDE MILLING CUTTERS  
AT THEIR  
BEST**

**VAN HOORN**  
End milling cutters  
189 pages  
Art.no. 019900 0079

Overview of all free manufacturers' catalogues  
on page 16/17

**from a diameter of 0.6 mm,  
with internal coolant supply**

Hollow turning, internal plunge turning, internal turning and chamfering, roughing and internal chamfering for subsequent parting as well as internal threading for small bore diameters continually pose new problems for production – problems that can often be solved only with special tools.

Mini-bore has been developed specifically to solve these problems and offers optimum conditions for cost-effective bore machining with diameters starting from 0.6 mm. The favourable cost-breakdown of the cutting inserts means that custom productions are no longer worthwhile.

The cutting inserts, available in right-hand and left-hand designs, are supported by a tool holder that can be used for both designs. The tool holder and cutting inserts are fitted with an internal coolant supply.

**Cutting material**

**K10F** uncoated, all-purpose fine-grain carbide metal, suitable for application at low and medium cutting speeds and for machining non-ferrous metals

**CN45F TiN coated**

All-rounder, for medium to high cutting speeds, with restrictions for non-ferrous metals

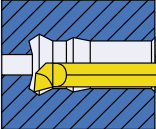

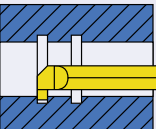

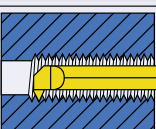

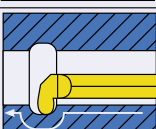

**AL41F TiAlN coated**

High temperature resistance at high hardness levels, also very well suited to non-ferrous metals

**Special designs**

If you have internal machining problems that cannot be handled with the cutting insert sizes listed here, we will be pleased to present you with possible solutions.

**from  $\varnothing$  0,6 mm**

	<b>Hollow turning</b> from diameters of 0.6 mm / up to 7 x D	
	<b>Internal plunge turning</b> from diameters of 4 mm / up to 7 x D	
	<b>Hollow turning and chamfering</b> from diameters of 5 mm	
	<b>Internal roughing and chamfering</b> for subsequent parting-off from diameters of 5 mm	
	<b>Axial groove turning</b> from external groove diameters of 15 mm	
	<b>Internal threading</b> from diameters of 4 mm	
	<b>Internal plunge turning</b> from diameters of 4 mm, full radius (on request)	

**Dümmel® Tool holder mini-børe**  
WERKZEUGFABRIK

- **With internal coolant supply**
- For holding right-hand and left-hand cutting inserts
- Two different holder Ø measurements (d1 and d2)
- Central coolant supply through the tool holder
- Axial position of the cutting inserts in the tool holder can be precisely reproduced via a built-in depth stop
- Radial position of the cutting edge is guaranteed by tension applied to the lateral clamping surface of the cutting inserts by the clamping screws
- Size O316 and O320 for 304450.... and 304455.... and high-pressure applications with central cooling hole

- **With internal coolant supply**
- Straight shank and lateral clamping surface
- Right-hand and left-hand versions
- **Cutting material:**  
**K10F** finest grain carbide, uncoated,  
**CN45F** finest grain carbide **TiN** coated,  
**AL41F** superfine grain carbide **TiAlN**

**From Ø 0.6 mm  
L1 to 7 x D**

**Internal turning**

- From 2.0 mm bore diameter
- Cutting inserts, uncoated

**Dümmel®** Cutting inserts mini-bore hardline  
WERKZEUGFABRIK

1096

- Bore machining from  $\varnothing$  2 mm
- Internal turning and copying
- Straight shank and lateral clamping surface
- Right-hand and left-hand versions (other left-hand versions available on request)
- **Material: X2CA superfine grain carbide TiAlN+C**
- **Can be used up to HRC 66**
- **best service life results only when coolant emulsions are used**
- **Advantages over CBN:**
  - No problems in machining thin-walled parts
  - Few temperature changes inside the workpiece
  - Can also be used in HRC 48 - 53 range without difficulty
  - Feed 100 % reproducible for the workpiece
  - Considerable reduction in tooling and adjustment costs

**Internal turning**

- From 2 mm bore diameter

## Dümmel® Clamp mounting DT-Line

NEW

- Multi-function tool for drilling and turning
- Clamp mounting with 4 clamping surfaces, 90° offset
- internal coolant supply
- drilling depths up to 4 x D
- bore machining from D<sub>min.</sub> 2.9mm
- cutting edge with internal coolant bore
- AL41F high-performance coating
- large clamping depths possible when turning and solid drilling

Designation	suitable cutting inserts	d g6 mm	L2 mm	L3 mm	art.no.	€

Multifunction tool for drilling  
and turning

## Dümmel® Cutting inserts DT-Line

NEW

- Internal coolant supply
- Clamping surface from above
- right-hand and left-hand versions
- Cutting material: AL41F micro-grain carbide TiAlN

From Ø 2.9mm

### Drilling and internal turning

- from boring diameter 2.9mm
- Coated cutting inserts AL41F
- L1 maximum turning depth
- L2 maximum boring depth

# ATORN® Systematic keyway slotting

INFO

The tool system for keyway slotting offers a cost-effective and simple solution in many areas and can be used on practically any CNC lathe, milling machine or machining centre.

Practically any common groove can be created directly on the lathe. The machining of complex and therefore often valuable workpieces or semi-finished products on a lathe is frequently one of the first work processes. The workpiece is either pre-turned or finished.

Grooves must now be applied longitudinally as a carrier or anti-twist protection. This tool system can now be used to manufacture longitudinal grooves compliant with DIN 138 and DIN 6885 on CNC lathes and reduce costs.

### References

- an undercut is necessary at the end of the broached groove for tool run out.
- the insert should not touch the bottom of the groove as the tool retracts.
- setting of the tool is very important. Check accurate the component diameter before taking the first pass.
- using oil or emulsion helps to achieve better surface finish and flush chips out of the component.
- the tool should be set at the 12 o'clock position to ensure that chips fall away from the groove.
- avoid interrupted cutting

### Approximate value for broaching

**Example:** heat-treated steel for instance 42CrMo4 with 1200 N/mm<sup>2</sup>

- infeed per pass 0,05-0,06 mm

- feed 5500 mm/min

## ATORN® Tool holder for keyway slotting

- Keyway slotting on CNC lathes, milling machines and machining centres
- Keyway slotting of longitudinal grooves in accordance with DIN 138 and DIN 6885

## ATORN® Cutting inserts for keyway slotting

- Keyway slotting of longitudinal grooves in accordance with DIN 138 and DIN 6885
- Tolerance class C11/JS9/P9
- **Type NPU**, bore Ø from 6 mm
- **Type NP10**, bore Ø from 10 mm
- **Type NPV**, bore Ø from 22 mm
- Cutting material: **HC8620**, **TIALN**-coated

### Type NPU, 45°/chamfered

## ATORN® Keyway slotting sets for longitudinal grooves

- Keyway slotting on CNC lathes, milling machines and machining centres
- Keyway slotting of longitudinal grooves in accordance with DIN 6885
- **Cutting inserts loose fit in accordance with DIN 6885**
- Tolerance class JS9
- Cutting material: AL41F, TiAlN-coated

**Economical keyway slotting even  
in very small production runs!**

### NPU 5-piece keyway slotting set, bore Ø from 6 mm

Contents	art.no.	€
1x clamp mounting, NHU.0025.1   3x cutting inserts: NPU.0200.01.1   NPU.0300.01.1   NPU.0400.01.1   1x hex key for groove widths 2 / 3 / 4 mm	<b>307010</b> 0001	232,-

## zeus Smoothing tool SET 510 / 520

- The Zeus smoothing tool is an all-rounder in all conventional surface-smoothing operations.
- Whether on straight, conical or concave surfaces
- Planar sides can also be machined.
- Not suitable for interrupted cutting.

### Smoothing tool holder SET 510

- **Properties**
  - Fixed tool head
  - **Supplied without smoothing tips**
    - Can be adjusted up to  $\pm 10^\circ$  thanks to integrated setting option in the shank
    - For smoothing cylindrical shafts
- **Recommendation**
  - Polishing speed up to 200 m/min
  - Feed up to 0.2 mm/rev
  - Workpiece allowance of 0.01 mm (~RZ 10) and 0.02 mm (~RZ 20)
  - Cooling lubricant is recommended
- Tool holder SET 510-10U including 12x12 mm and 16x16 mm shank adapter
- Tool holder SET 510-16U including 20x20 mm and 25x25 mm shank adapter

Designation	Contents	a mm	b mm	c mm	d mm	e mm	f mm	x mm	art.no.	€
510-10	SET 510-10U, shank adapter 12x12 mm, 16x16 mm	10	10	110	16	30	18	9	380200 0001	719,-
510-16	SET 510-16U, shank adapter 20x20 mm, 25x25 mm	16	16	119.5	20	39	25	13.5	380200 0002	739,-

3161

### Smoothing tool holder SET 520

- **Properties**
  - Variably adjustable tool head
  - **Supplied without smoothing tips**
    - Tool for universal applications
    - Swivel range  $\pm 90^\circ$
    - Use up to the collar
    - The adjusting options of the tool head allow the smoothing of planar surfaces, as well as conical, convex and concave geometries.
- **Recommendation**
  - Polishing speed up to 200 m/min
  - Feed up to 0.2 mm/rev
  - Workpiece allowance of 0.01 mm (~RZ 10) and 0.02 mm (~RZ 20)
  - Cooling lubricant is recommended
- Tool holder SET 520-10U including 12x12 mm and 16x16 mm shank adapter
- Tool holder SET 520-16U including 20x20 mm and 25x25 mm shank adapter

Designation	Contents	a mm	b mm	c mm	d mm	e mm	f mm	g mm	x mm	Angle	art.no.	€

## Perfect labelling for every application

### Full flexibility

Labelling can be applied everywhere, right up to the collar and on any given workpiece diameter. Ideal for several series with various workpieces and/or changing inscriptions.

### Efficiency for all series sizes

zeus labelling technology is equally suitable for all batch sizes and guarantees efficiency in all applications.

## Precise in every position

Where can the workpieces be labelled?

The example shows that you can inscribe practically everywhere. Whether on spherical surfaces, on the collar, on inclined surfaces or on the face - zeus labelling technology meets your requirements.

## The right labelling system

We would be happy to determine the right labelling system for your application. Send us your enquiry with your specifications.

Don't hesitate to contact us in person.

We offer comprehensive advice and find the optimum solution for you!

## zeus Labelling tool 432

- The Zeus lettering system is versatile, as it is not governed by the workpiece diameter.
- Interchangeable segments allow flexible, fast and low-cost adjustment of the text for various applications.
- For materials up to a tensile strength of 1000 N/mm.
- Available only on request for materials with a greater tensile strength.
- Embossing depth of 0.15 mm in diameter.

### Labelling set 432

- Sets supplied in high-quality plastic case, without letters, numbers and special characters

#### • Lettering set 4312-08

- 1 x basic shank (full shank version) tool 432-08
- 1 x shank adapter 10x10 mm, 12x12 mm and 16x16 mm
- 1 x start and end segment

#### • Lettering set 4312-16

- 1 x basic shank (full shank version) tool 432-16R
- 1 x shank adapter 20x20 mm and 25x25 mm
- 1 x start and end segment

Designation	a mm	b mm	c mm	d mm	e mm	f mm	x mm	for Ø mm	Left-hand		Right-hand

### Lettering segment set for 432-08 R/L

#### • Properties

- Lettering segment independent of tool diameter
- Segments are individually exchangeable
- Full depth and sharpness of the script is achieved through an embossing process.

#### • Application

- Exact positioning of the lettering on the workpiece circumference
- Point height corresponds to the first embossed dot
- Individually configurable embossing position
- Lettering right up to the collar is possible
- Change the reading direction by rotating the T-shaped segments

#### • Individual letters and numbers are available on request.

## Knurl cutting tool for 1 knurling wheel, 25 x 6 x 8 mm

NEW

- Use: Knurl cutting, workpiece knurl profile according to DIN 82: RAA
- Knurling wheels: RAA = 1 x BR 30° for right-hand use, RAA = 1 x BL 30° for left-hand use
- Machine type: conventional and CNC automated lathes, centre height integrated in the tool
- Modular design, tool can be used universally as a right-hand or left-hand version
- Quick retooling by simply removing and turning the knurling head, precise axis position after every reassembly thanks to 3-point support
- With position indicator for optimum initial positioning
- Fine adjustment of the knurling head via threaded spindle with scale
- Precise control for axially parallel knurling thanks to adjustable knurling head
- Clearance angle set using grub screws in the shank
- Special surface hardening for increased wear resistance
- Supplied without knurling wheel

Design	Shank width mm	Shank height mm	Total length mm	Working area mm	for knurling wheel mm	Type	Holder without wheel art.no.	€

**Knurl cutting tool for 2 knurling wheels****NEW**

- Use: Knurl cutting, workpiece knurl profile according to DIN 82: RGE30°, RGE45°
- Knurling wheels: RGE30° = 2x type AA, RGE45° = 1x BL 15° and 1x BR 15°
- Machine type: Lathes and automated lathes, conventional and/or CNC
- Modular design: Tool can be used universally as a right-hand or left-hand version
- Fast retooling by simply removing and turning the knurling head,
- Flexible application: vertical height adjustment for use on shank sizes 20 and 25 mm
- Easy to set: setting scale and setting spindle for quickly adjusting the manufacturing diameter
- Fine adjustment of the centre height by means of cutter spindle height adjustment
- Stable construction: toothing between the tool holder and the cutter head
- Special surface hardening for increased wear resistance
- Vertical height adjustment for use on shank sizes 20 and 25 mm
- Supplied without knurling wheel

PM and PM-Tenifer

- Teeth precision-milled to the exact pitch
- Fully hardened knurl, hardness HRC 61+2
- Flat faces and bore are ground
- **Chamfering on both sides for form knurling**
- **Sharp-edged for knurl cutting**
- **Material: PM, PM-Tenifer with surface treatment** to enhance service life

10 Manufacturer information

The ISO code comprises 9 symbols, whereby symbols 8 and/or 9 are used only where necessary. The manufacturer can affix further symbols to the ISO code with a hyphen e.g. to indicate the chip breaker form).

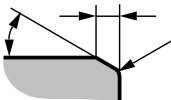

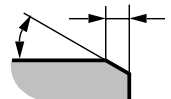

## 1 - 7 ISO designation system

The ISO designation system corresponds to the ISO designation system for indexable turning inserts according to ISO 1832.

## 8 Cutting edge

Symbol	Cutting edge design	Example		Shape
<b>S</b>	Chamfered and rounded cutting edge	CNGA 120412 <b>S02020</b>	0.20 mm x 20° chamfered and rounded cutting edge	
<b>T</b>	Chamfered cutting edge	CNGA 120404 <b>T02020</b>	0.20 mm x 20° chamfered cutting edge	

- Ceramic indexable cutting inserts are provided with a cutting edge chamfer.
- These cutting edge chamfers serve to introduce the applied cutting forces into the indexable cutting insert in the form of compressive forces.
- The chamfer width and chamfer angle are adapted to the cutting edge design depending on the application, e.g. for fine and finish turning of cast iron and steel materials => 0.05 mm x 20°, for finish and rough turning of cast iron materials and for medium machining of steel materials 0.20 mm x 20°
- Double chamfers are used for particularly high strain on the tool cutting edge.

ISO  
**P**

In the ISO-P range, general structural steel and unalloyed steel have up to 110 HB (Brinell hardness) and a carbon content of up to 0,55%. There is also low-alloy steel up to 180 HB and high-alloy steel from 200 HB - 400 HB and materials with a hardness of up to max. 48 HRC (Rockwell hardness).

The new turning grades with multilayer CVD layers are particularly suitable for cutting ISO-P materials.

# ISO M

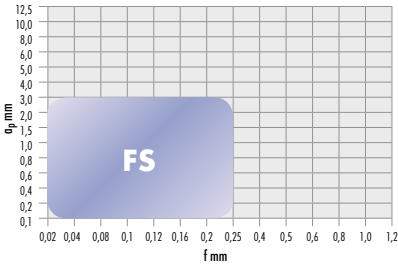

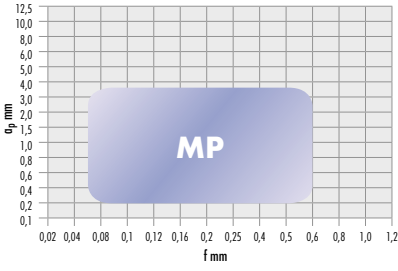

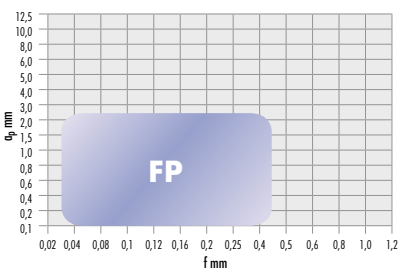

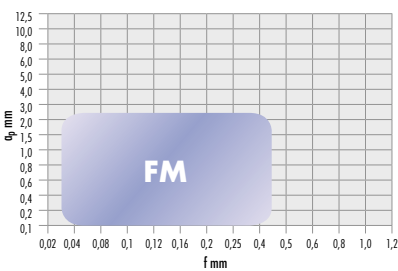

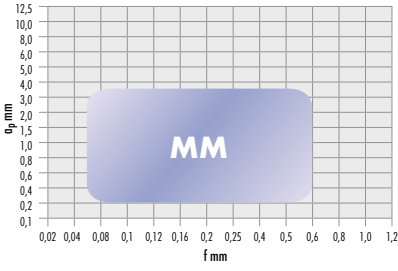

Indexable cutting inserts in the ISO-M area are mainly used in machining ferritic and martensitic stainless steel and austenitic stainless, usually acid-resistant steel (Ni content of over 20%). So-called duplex steel has a two-phase structure and consists of ferrite and austenite. Higher-alloyed duplex materials are also called super-duplex or hyper-duplex.

# ISO K

Indexable cutting inserts for the ISO-K area are mainly used for cast iron that can be forged (GG) and spheroidal graphite iron (GGG), as well as for cast iron with vermicular graphite and bainitic cast iron with spheroidal graphite iron.

Quality	ISO	Hardness	Coating	Toughness / Wear resistance	Continuous cut	Slightly interrupted cut	Significantly interrupted cut

ISO  
P

In the ISO-P range, general structural steel and unalloyed steel have up to 110 HB (Brinell hardness) and a carbon content of up to 0.55%. There is also low-alloy steel up to 180 HB and high-alloy steel from 200 HB - 400 HB and materials with a hardness of up to max. 48 HRC (Rockwell hardness).

The new turning grades with multilayer CVD layers are particularly suitable for cutting ISO-P materials.

# ISO M

Indexable cutting inserts in the ISO-M area are mainly used in machining ferritic and martensitic stainless steel and austenitic stainless, usually acid-resistant steel (Ni content of over 20%). So-called duplex steel has a two-phase structure and consists of ferrite and austenite. Higher-alloyed duplex materials are also called super-duplex or hyper-duplex.

ISO  
**S**

Indexable cutting inserts for the ISO-S range are mainly used in machining highly heat-resistant alloys based on nickel-iron and cobalt. Titanium in its pure form or in alpha and beta alloys complete this ISO-S area. These materials which are extremely difficult to machine require a machining strategy adapted to the component which also depends on the machine.

# ATORN® Overview of positive chip breakers

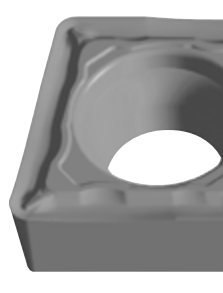

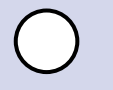

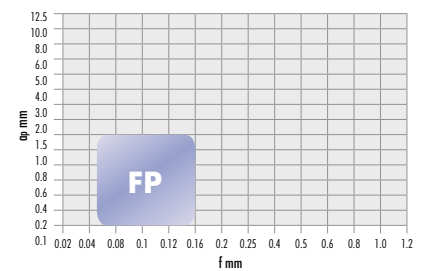

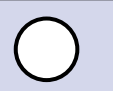

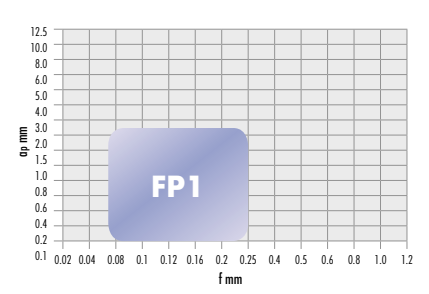

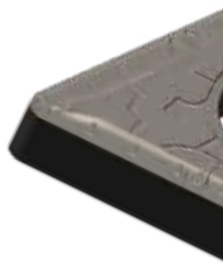

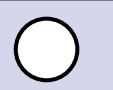

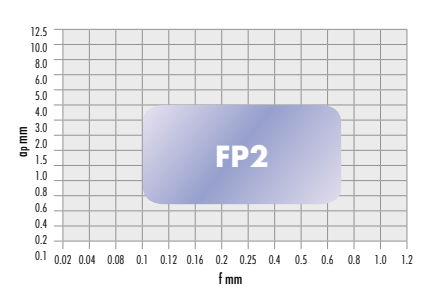

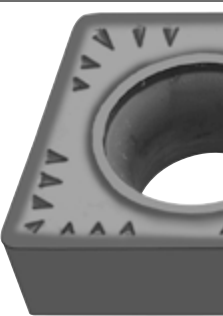

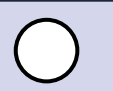

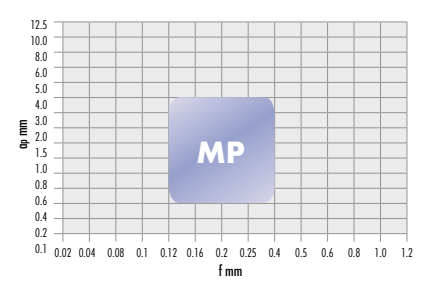

INFO

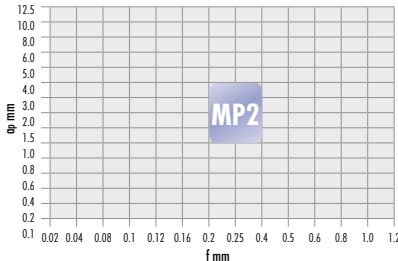

## The new chip breakers from the range for positive indexable cutting inserts (5° and 7°)

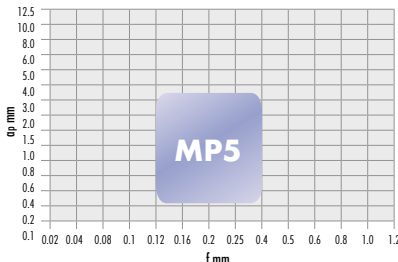

The newly calculated chip breakers for individual use have been adapted to users' needs. The guarantee of optimised chip breaking properties in daily use was the priority here.

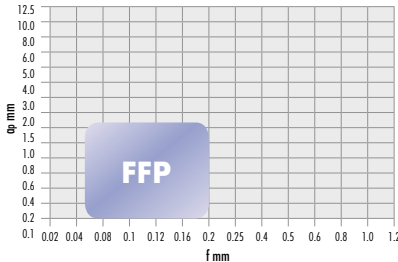

Adapted cutting edge preparation and enhanced surface treatment make the geometries even more efficient and more soft cutting. This is evident both in daily use and in series production as a result of an extended service life and lower machine loads. The latest insights in the development and modern cutting strategies of the individual ISO classes P, M, K, S and N were applied in the development of the chip breaker.

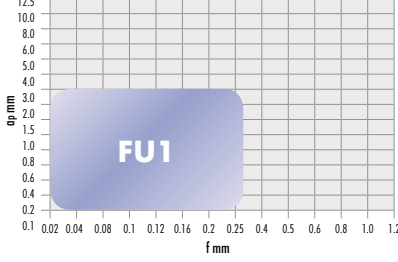

The benefits to the customer in terms of effectiveness, process reliability and material removal rate are the result. Elegant solutions are available for fine and ultra-fine finishing, medium machining and light roughing for positive geometries. The new TURN provides the best possible chip control even with small cutting depths and feeds, very good chip breaking properties even with exotic materials with a significantly reduced tendency to form burrs, and the best possible surface qualities.

# ATORN® Overview of negative chip breakers

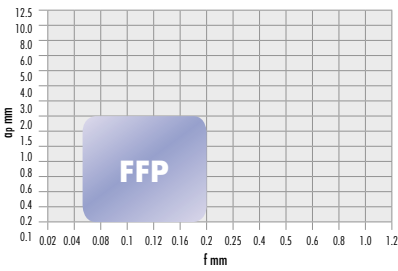

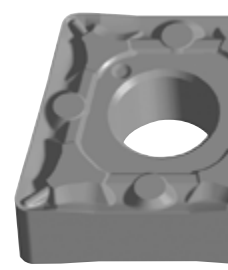

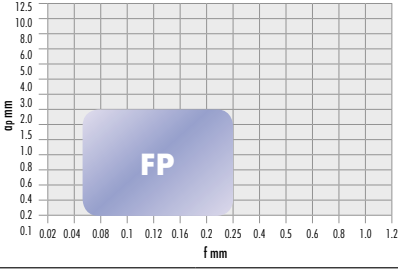

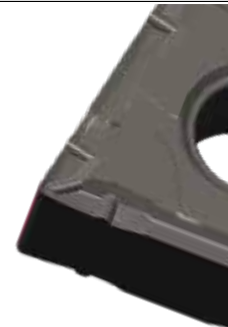

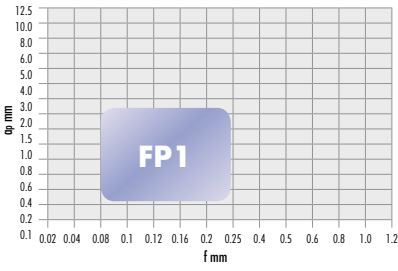

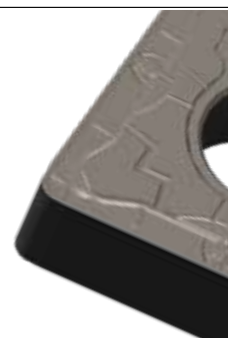

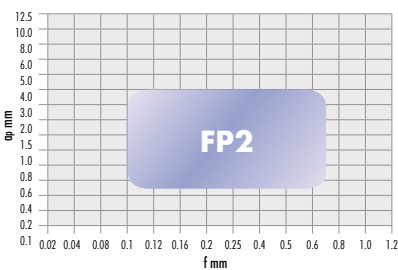

INFO

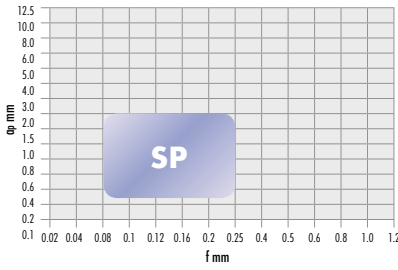

## The new chip breakers from the range for negative indexable cutting inserts (0°)

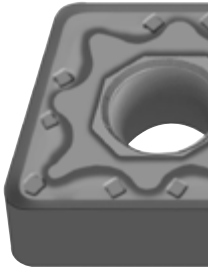

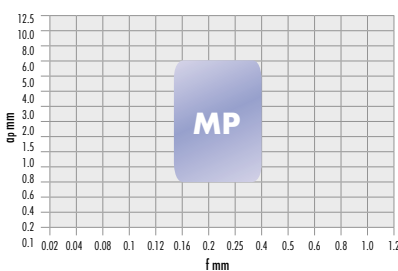

The newly calculated chip breakers for individual use have been adapted to users' needs. The guarantee of optimised chip breaking properties in daily use was the priority here.

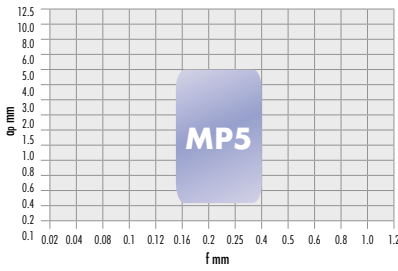

Adapted cutting edge preparation and enhanced surface treatment make the geometries even more efficient and more soft cutting. This is evident both in daily use and in series production as a result of an extended service life and lower machine loads. The latest insights in the development and modern cutting strategies of the individual ISO classes P, M, K, S and N were applied in the development of the chip breaker.

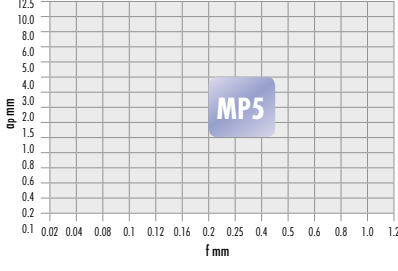

The benefits to the customer in terms of effectiveness, process reliability and material removal rate are the result. Elegant solutions are available for fine and ultra-fine finishing, medium machining and light roughing for negative geometries. The new TURN provides the best possible chip control even with small cutting depths and feeds, very good chip breaking properties even with exotic materials with a significantly reduced tendency to form burrs, and the best possible surface qualities.

## Vibration-dampened boring bars

### Selecting the right indexable cutting insert

Selecting the right insert can have a major positive impact when machining with vibration-dampened boring bars. The indexable cutting insert can improve machining stability by minimising cutting forces.

- Where possible, always use the shortest tool length.
- To reduce radial forces to a minimum, ensure the entry angle is as close to 90° as possible.

- To reduce the total cutting force, select the smallest possible indexable cutting insert angle.
- To reduce the cutting forces, select the smallest possible corner radius.
- The machining depth ( $a_p$ ) should be greater than the corner radius of the indexable cutting insert.
- If possible, use an indexable cutting insert with a positive geometry to reduce the cutting pressure.

### Clamping the boring bar Overhang and clamping length

Vibration-dampened boring bars have a defined overhang and a defined clamping length. For a 60 mm boring bar with an overhang length of 10 x D, the total length of 840 mm incl. holding fixtures is divided as shown here. If the boring bar reaches beyond the specified overhang length, dampener operation is no longer fully guaranteed. A clamping length that is too short will produce the same result. It is important for the function of the boring bar that the specified parameters are observed.

### Clamping of vibration-dampened boring bars

The clamping length of vibration-dampened boring bars should be no less than 4 x D.

Many clamping systems offer the option of slotted boring bar holders for full wrap-around clamping. Unfortunately, these systems often lack the necessary clamping length or a suitable diameter. In such cases, slotted clamping sleeves are used. These reduce to the required diameter and generally increase the clamping length.

Another option is to clamp using a split bushing in a boring bar holder. In this case, the boring bar is clamped over the bushing and the bushing completely encircles the boring bar. The three clamping screws on the boring bar holder clamp the full bushing, thus achieving good rigidity.

Where possible, do not use a boring bar holder without a bushing. If the boring bar is locked using only one screw there is only one point of contact, resulting in very poor rigidity. In addition, the screw can damage the surface of the boring bar and this makes positioning more difficult.

### Minimum and maximum overhang

Vibration-dampened boring bars have two markings at 90° angles to the central axis. These mark the minimum and maximum overhang.

# Vibration-dampened boring bars

INFO

## Design of boring bars

Design types of conventional boring bars and boring bars with vibration-dampening elements

### Conventional steel boring bars with internal coolant feed

### Vibration-dampened boring bars with internal coolant feed

### Vibration-dampened boring bars with carbide-reinforced shank and internal coolant feed

## Available space in the bore

The different boring bar diameters result in different spatial conditions in the machine or in the component. In order to ensure an optimum result, it is important to take into account the resulting chip volume and the available space in the bore and, where necessary, reconsider the geometry of the selected insert or version. Poor results are often due to insufficient space in the bore.

### QC20: positive inserts only

### DM40: positive and negative inserts

\* The minimum diameter depends on the holding fixtures.

## Vibration-dampened boring bars

INFO

### Minimum diameter of the existing bore hole

The minimum diameter is dependent on the choice of boring bar in conjunction with the boring head used.

<b>Q</b>	Material removal rate	cm <sup>3</sup> /min.
<b>V<sub>f</sub></b>	Feed rate	m/min.
<b>z<sub>n</sub></b>	Number of cutting corners in the tool	
<b>n</b>	Rotational speed	rpm

<b>Cutting speed</b>	$V_c = \frac{\pi \times D_c \times n}{1000} = \text{m/min.}$
<b>Feed</b>	$V_f = f_z \times n \times z_n = \text{mm/min.}$
<b>Feed per revolution</b>	$f_n = \frac{V_f}{n} = \text{mm/U}$

<b>Rotational speed</b>	$n = \frac{V_c \times 1000}{\pi \times D_c} = \text{U/min.}$
<b>Material removal rate</b>	$Q = \frac{a_p \times a_e \times V_f}{1000} = \text{cm}^3/\text{min.}$

## ATORN® Technical information

### Improved chip control

- Replace worn cutting inserts
- Select more suitable chip control form
- Use neutral cutting insert
- Check perpendicular setting of the cutter holder
- Supply ample coolant
- Increase feed
- Temporarily suspend feed upon contact with the workpiece to allow the chips to pass into the chip guide.

### Eliminating rattling

- Part-off as closely as possible to the chuck, minimise cutter holder overhang
- Check clamping and tool structure
- Change rotational speed
- Increase feed
- Block support in conventional lathes

### Prevention of bevel breakages

- Select suitable carbide type and cutting insert geometry
- Use cutting insert with larger corner radii
- Prevent rattle
- Avoid feed jerk at the end of the cutting procedure, possibly using a solid jerk limiter
- The fluid in the lathe hydraulic system must be 100% free of air bubbles
- Reduce the formation of built-up edges (to identify built-up edges as a reason for nicks, interrupt cutting and check cutting edge)

### Prevention or reduction of built-up edges

- Select suitable carbide type and cutting insert geometry
- Increase cutting speed
- Ensure sufficient cooling, recommendation: oil-based coolant

## Axial grooving and hollow drilling

### Application

Right cutting inserts should only be used in right-hand tools; left cutting inserts should only be used in left-hand tools. The cutting speed for axial grooving should be just 80% of the cutting speed for parting-off. The feed rate should be reduced to 50%.

Use plenty of coolant, aim coolant spray directly on the kerf.

- For compact holders and for the clamping shank / cutter holder combination, the dimension C described in the adjacent illustration must be integrated into the tool.

### Expanding the groove (ramping)

- First make groove in the largest-possible diameter range of the workpiece
- Immediately continue with the overlapping grooving. Thus the smallest machining diameter is dictated by the cutting insert design (see illustration). The maximum diameter is unlimited.
- A cutting insert width of  $0.9 \times W$  is recommended for overlapping cuts.
- A clamp depth of no more than  $0.1 \times$  cutting insert width is recommended for the face finish-turning of the ramping.

### Cutting out

- To prevent tool damage caused by a loose core, stop feed briefly before breakthrough and penetrate the core with a plastic hammer.

### Precautionary measures

Carrier tools may not grate on the workpiece.

We recommend the following precautionary measures:

- Please observe the machining diameter of the tools. Grooves should only be made within this area.
- Align tool holder precisely with feed axis.
- For initial grooving with a new structure, stop feed at 1.5 mm punching depth and inspect. If there is friction, check tool height setting.
- Do not use worn or chipped cutting inserts

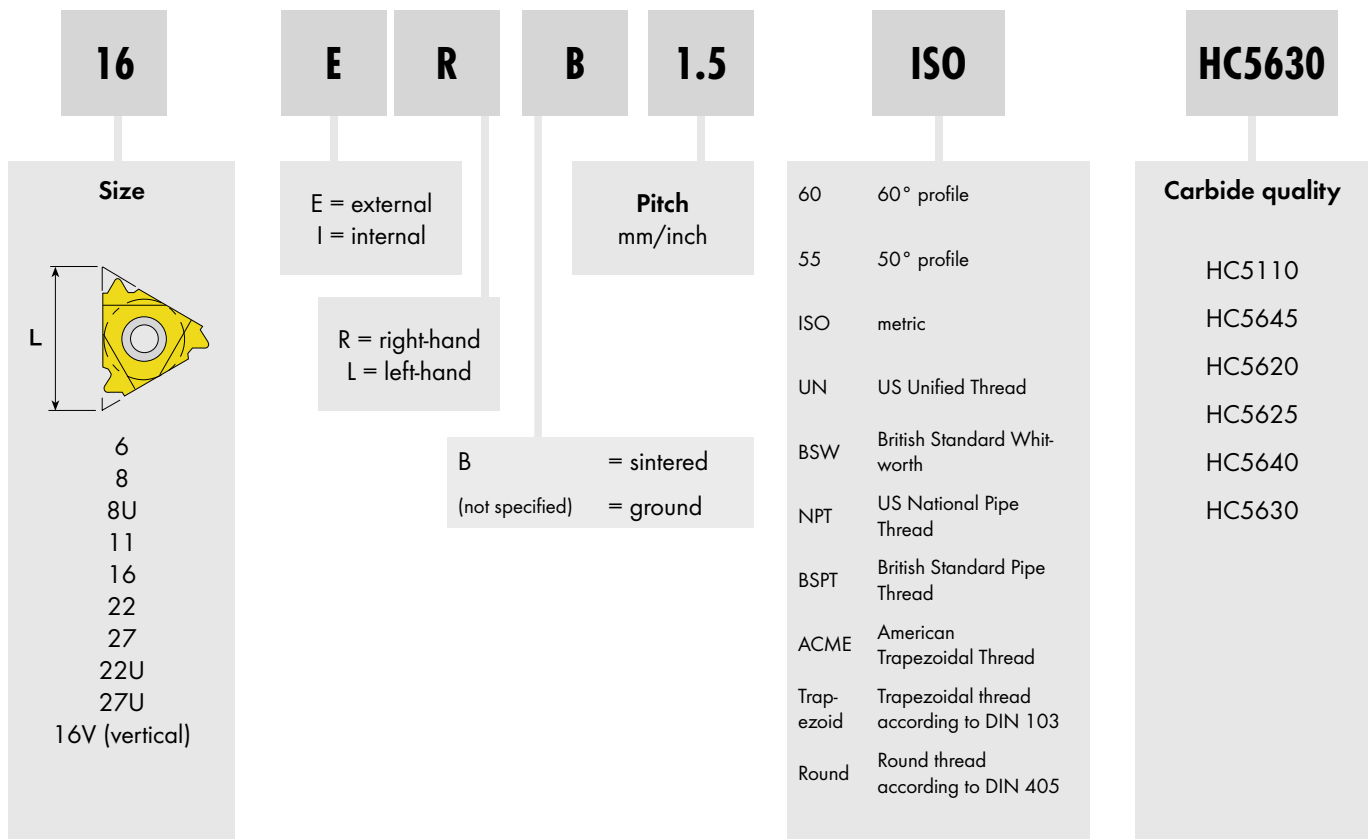

## ATORN® Indexable inserts for grooving system DED

- Please adjust these guideline values according to clamping operation and machine set-up!

## Choice of number of cuts

- The number of cuts should be increased for the mini or ultra-mini system, as well as for hard materials.

Pitch	mm	0.5	1.0	1.5	2.0	2.5	3.0	4.0	6.0
	TPI	48	24	16	12	10	8	6	4
Number of cuts		3 - 6	4 - 9	5 - 11	6 - 13	7 - 15	8 - 17	10 - 20	11 - 22

# Pitch angle calculation and selection of spacers

Formula for calculating the pitch angle  $\beta$

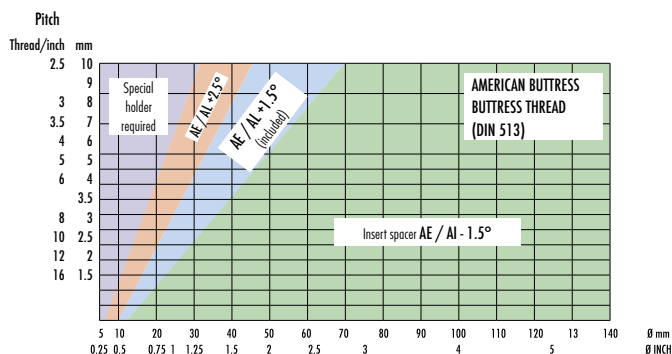

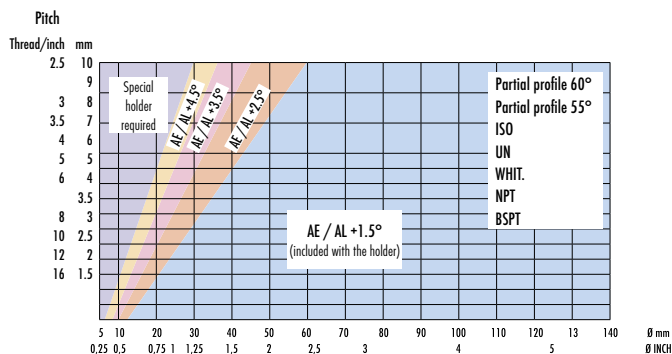

$$\tan \beta = P (\text{pitch}) / \pi \times \varnothing D$$

simplified:  $\beta = 20 \times P / \varnothing D$

Example:

$$\varnothing D = 30 \text{ mm}, P = 1.5 \text{ mm}$$

$$\beta = 20 \times 1.5 / 30 = 1$$

For most applications it is not necessary to change the spacer. However if a change is necessary, please select:  
**AE spacers for EX-RH and IN-LH clamp mounting and**  
**AI spacers for IN-RH and EX-LH clamp mounting**

Positive pitch angle

Negative pitch angle

## Spacers, positive pitch angle

For turning right-hand thread with right clamp mounting or left-hand thread with left clamp mounting

## Spacers, negative pitch angle

For turning right-hand thread with left clamp mounting or left-hand thread with right clamp mounting

## Important:

The dimension H remains constant for each spacer combination.

## ATORN® Cutting inserts for keyway slotting

- Observe the undercut at the end of the cleared slot to allow free discharge of the tool.
- The cutting edge should not touch the base of the slot while the tool is retracting.
- Adjustment of the tool is not permitted. Therefore carefully check the diameter of the workpiece before you proceed.
- If you use oil or an emulsion, the chips are flushed away from the workpiece; this also helps to produce a perfect surface.
- If the tool is aligned upwards, the chips automatically fall downwards away from the cutting edge.
- Avoid interrupted cutting.

### Guide values for slotting

Example:

- Tempering steel e.g. 42CrMo4 with 1200 N/mm<sup>2</sup>
- Feed per lift 0.05-0.06 mm
  - Feed f = 5500 mm/min

## Cutting inserts DT

- Please adjust these guideline values according to clamping operation and machine set-up!
- **Feed values (f) are dependent on the coolant pressure:**
  - Coolant pressure 10-30 bar:** select lower third of the feed values
  - Coolant pressure 30-70 bar:** select upper half of the feed values
- the feed values (f) are also dependent on the material

**palbit**  **Grooving and parting-off system MINI**

- Please adjust these guideline values according to clamping operation and machine set-up!

**External machining:** **right-hand** inserts and **right-hand** holders and/or **left-hand** inserts and **left-hand** holders

- Permanent cooling across the entire cutting surface is recommended.
- Particularly appropriate for automatic feed; manual feed can reduce the service life..
- The feed should be reduced by 10-15 % when using inserts with 7° clearance angle.

**Cutting speeds for quality PH 7920**

## Live precision lathe centres

- High-performance design specially for CNC lathes
- Draw-off nut to company standards
- For high speeds and axial loads
- Excellent true-running accuracy thanks to the high-end bearing
- Fully hardened and ground
- Maintenance-free permanent lubrication
- Shaft sealing ring prevents the ingress of dirt and coolant
- With additional sealing, also suitable for grinding applications

# Clamping technology info

- **Front face driver for turning and milling work**
- for efficiently turning workpieces along their entire length with high accuracy and without reclamping
- simultaneously allows slots or tooling to be milled
- developed with a modular concept, making the driving discs and corresponding centring points universally replaceable
- **available on request**

## ROHM Live centre

Easy to use for tubes with large diameters

The extended running point guarantees the required clearance angle for turning parts with small diameters.

Ideal for bar stock with large diameters

# Clamping jaw finder

- Jaws for approx. 3,000 different chuck types
- Find the right jaws for your chuck quickly and easily.
- Easy to find and quick to order with lightning-fast delivery!

[www.spannbackenfinder.de](http://www.spannbackenfinder.de)

## Universal lathe chuck

- **Chuck body made from cast iron or steel**
- Suitable for lathes as well as all types of milling and drilling devices
- Straight or with direct mounting
- Guides and wear surfaces ground
- Flat spiral ring made from high-quality alloy steel, die-forged and hardened
- **Supplied with:**
  - Includes chuck key and attachment screws
  - 1 set of boring jaws (stepped outward)
  - 1 set of turning jaws (stepped inward)

### Three-jaw chuck, cast design

## Flange for lathe chucks and face plates

- **DIN 55026 with through-hole for direct connection to the spindle head**
- **DIN 55027 for bayonet-type disc fastening with stay bolts and collar nut**
- **DIN 55029 Camlock version with Camlock bolt**
- Steel design
- Machined on the machine side
- Faced on the chuck side
- Other taper and chuck sizes available on request

### DIN 55026

- Short taper holder machined in accordance with DIN 55026 (A2)
- Faced on the chuck side
- Without attachment screws

## ROHM Universal lathe chuck ZS

- Die-forged steel body and spiral ring
- High clamping force
- Extra-low design for minimal protruding contours
- Chuck jaws ground-off for smooth running
- Balanced out and hardened
- **Supplied with socket spanner, drilling and turning jaws**
- **Additional versions available on request**

**RÖHM Wedge bar chuck DURO-T**

**DIN 6350A**   **DIN 55027**

- With jaw safety mechanism, centric clamping
- Higher clamping forces
- Stiffer chuck body (guaranteed accuracy at higher loads)
- Chuck body fully surface-hardened
- High jaw change repeatability
- Optimised wearing parts (e.g. safety shut-off valve)
- True running and axial run-out tolerance twice as accurate as specified by DIN accuracy class 1
- Enhanced corrosion protection
- Compatible with base and top jaws from other manufacturers
- Supplied with safety key (as demanded by EN 1550), set of reversible one-piece jaws or set of base jaws with reversible top jaws

**With straight centre mount, DIN 6350 A**

## Kitagawa Wedge hook power chuck BR

NEW

- **Model BR / successor model to the BB-200 series**
- **Enlarged clearance**
- **Repetition precision of below 10 µm**  
Repetition precision of below 10 µm can be achieved when used with T-Nut-Plus slot nuts and Kitagawa SB jaws. Turned soft jaws for different clamping diameters can thus be exchanged with accuracy. This saves time and money!
- **Patented base jaw: up to 10% increased clamp force at maximum rotational speeds**
- Solid steel design
- Hardened and ground guides
- High true running accuracy
- Lubrication nipple in every base jaw
- Centre mount in accordance with DIN 6353
- Supplied without flange, **without top jaws**;  
supplied with 1.5 mm x 60° toothed base jaws, standard T-slot nuts, chuck and jaw fastening screws, unthreaded drawbar nuts and a special assembly key
- **Threaded drawbar nuts and BR 12 available on request**

# Kitagawa Wedge hook power chuck B/BT-200

DIN 6353

- Model B/BT-200
- Large through-hole
- All-steel design
- Hardened and ground guides
- High true-running accuracy
- Lubrication fitting in every base jaw
- Centre mount in accordance with DIN 6353
- Supplied without flange and **without top jaws**; includes 1.5 mm x 60° toothed base jaws, T-slot nuts, chuck and jaw fastening screws, unthreaded drawbar nuts, special assembly key
- Further sizes and models available on request
- **Threaded drawbar nuts available on request**

# Kitagawa Power chuck flange

- Precision flange featuring an all-steel design
- For chucks with centre mounts in accordance with DIN 6353
- Spindle-side design: Short taper in accordance with DIN 55026 and DIN 55021
- Compatible with: BT200 / B200 / BB200
- Supplied without flange fastening screws

## FAHRION® Dead-length collets

DIN 6343

- Hardened and ground
- True running accuracy:
  - Ø 1-10 mm ≤ 20 µm
  - Ø 11-30 mm ≤ 30 µm
  - Ø 31-60 mm ≤ 40 µm
- Collapse maximum 0.1 mm of nominal diameter
- Smooth bore up to Ø 8 mm, transverse grooves from Ø 9 mm
- Square/hex.: up to 12 mm = smooth bore, from 13 mm = with transverse grooves
- Collets with longitudinal and transverse grooving available on request, as well as multi-range collets in a variety of designs

**FAHRION®** Emergency dead-length collets

**DIN  
6343**

- For internal turning
- Hardened and tempered to approx. 45 HRC and fully ground
- Can be clamped in chucks using three removable alignment pins at the front, and can be machine-finished to the required bore diameter or with a stepped hole

Designation	D mm	D1 mm	D2 mm	L mm	Ø mm	art.no.	€
173 E	60	50	48	94	Pre-drilled to Ø 3	<b>433047</b> 0030	<b>69,70</b>

4119

**SARA®** Internal stop for dead-length collets

- For dead length collets in accordance with DIN 6343
- No collet shank deformation or impact on clamping behaviour
- Can also be used as a limit stop for hollow parts
- Can be used with round, hexagonal and square collets

for collets		art.no.	€

**Kitagawa** CRL power-operated collet chuck

- All-steel design, hardened and precision-ground
- For multi-range and steel collets in accordance with DIN 6343, 173 E or 185 E
- 2 sizes: up to material Ø 42 mm, or up to material Ø 60 mm
- Other sizes for a maximum material Ø 36 mm, 54 mm and 66 mm are available on request
- Equipped for use with a length stop, but only in combination with multi-range collets.
- For bar work on CNC lathes
- Especially for high speeds and true-running accuracies
- Supplied with chuck fastening screws and thrust collar (unthreaded)
- Without collets
- **Threaded drawbar nuts available on request**

**CRL-42 for 173E dead-length collets**

## Kitagawa QCRL / QD-CRL power-operated collet chuck

- **Model QD-CRL comes without a flange - direct short taper holding fixture included**
- **Bayonet fixing allows collets to be changed quickly**
- For  $\varnothing$  42 mm (173E) up to  $\varnothing$  60 mm (185E), version up to  $\varnothing$  80 mm (193E) and collet reducer from 185E to 173E available on request
- For bar work on CNC lathes, especially for high speeds and true-running accuracies
- Supplied with chuck fastening screws and thrust collar (unthreaded), without collets
- **Threaded drawbar nuts available on request**

## Kitagawa DHP power-operated collet chuck

- **Model DHP65**
- Compact design
- High accuracy
- Ideal for use in initial machining due to axial tension
- Fully compatible with commercially available 65 mm clamping heads
- Easily adaptable to existing machinery
- DHP65 chucks are lightweight and can be fitted quickly
- Supplied without collets or changing fixtures; includes blank unthreaded drawbar nut
- Additional chucks available on request
- **Threaded drawbar nuts available on request**

### Clamping $\varnothing$ max. 65 mm

# Kitagawa Power-operated collet chuck DKF

- **Model DKF65: clamp Ø max. 65 mm**
- Compact design
- High precision
- **Clamping without changing the axial position of the clamping head**
- Ideal for bar stock, secondary machining or inserts on a main or counter spindle
- Fully compatible with commercially available 65 mm clamping heads
- Easily adaptable to existing machinery
- Supplied without collets and switching equipment, includes blank unthreaded drawbar nut
- Threaded drawbar nuts available on request

**for CNC lathes**

- Tools for complete production on CNC lathes
  - Drilling, milling and thread cutting in one clamping operation
  - Tools for axial or radial machining with the widest range of tool holders
  - German production with in-house repair service
- **Use** with all common CNC lathes that are suitable for powered tools
- No conversion from turning to milling
  - The widest variety of tools
  - Lower fixture costs since second clamping is not required
  - Compliance with the tightest shape and position tolerances as the workpiece is produced in a single clamping

**Individual, no-obligation quotes for powered tools are available on request.**

**Revolver / tool concept**

**A very rigid and accurate system. Three important unmatched innovations for increased efficiency and productivity.**

**4 default slot nuts**

- Simple conversion, no adjustment required
- Up to 300% greater repeatability compared with other systems
- Repeatability of the position  $<0.005$  mm
- Alignment with the machine spindle  $<0.1$  mm

**Compensating coupling**

- Floating drive, minimal clearance
  - Vibration and noise reduction
  - Simple maintenance, long service life
  - Improved torque transfer
- Contact surface enhanced by 60%

**Rigid and flexible tool interface**

- Use of standard collets and adapters
- Maximum accuracy
- Optimum rigidity and flexibility for heavy machining
- Greater machine output and lower production costs

## EPPINGER PRECI-FLEX®

SMARTER TOOLING SOLUTIONS

- The ESA Eppinger modular system creates completely new possibilities in precision, flexibility and efficiency.
- Interface based on standard collet mounts
- The benefits speak for themselves
- ER collet mount and PRECI-FLEX adapter in one tool holder
- maximum expansion capability
- taper/planar support, absolute precision
- very compact
- maximum rigidity, thus outstanding cutting performance
- long tool lives
- pre-settable
- quickly re-settable
- optimum efficiency

INFO

## EPPINGER PSC

SMARTER TOOLING SOLUTIONS

- world's shortest PSC interface
- lots of space – even for large workpieces
- compact design increases system rigidity and thus workpiece accuracy
- comfortable one-hand operation, fast tool changes
- available on request

INFO

## EPPINGER DECOFLEX®

SMARTER TOOLING SOLUTIONS

- Tool holders with minimal dimensions
- particularly suited for use in small-scale lathe-milling machines
- available on request

INFO

**EPPINGER PRECI-FLEX® powered tool holder with VDI shank**

**• for CNC lathes with Sauter revolver and drive coupling DIN 5480**

- Each tool holder must be run-in. Thus temperature and noise emissions are monitored, measured and recorded.
- compact design of the single-piece base body
- very rigid bearing above taper roller bearing
- optimal position of the spindle
- patented seals to minimise heat generation
- internal cooling up to max. 70 bar
- all wear parts hardened and ground

**Boring/milling head, straight collet mount**

- ER collet mount
- Type 1 external cooling
- Type 2 external and internal cooling

**SARA® Hydraulic expansion clamping unit ECOGRIP ER**

- renders ER collet systems hydraulic
- Adjustable radial run-out
- installed correctly, a true running accuracy of 0.003mm is achieved. The radial run-out can be further adjusted to the desired accuracy by slightly tightening the setting screws.

powered by ETP

## High-speed spindles Toodle Blue and Toodle Green

- **Toodle Blue, driven with coolant**
- **Toodle Green, driven with minimal lubrication**
- Turbine-driven high-speed spindle
- Rotational speeds of up to 75,000 rpm
- Consistent and high true running accuracy thanks to interchangeable bearings and turbine
- Can also be used with upright machine spindle
- Most demanding machine applications with a standard tool holder
- Affordable transformation of existing machine centres with standard spindles into high-speed and ultra-modern machining centres
- **Compatible with any sealed chuck with internal coolant supply**  
Example: SARA collet chucks ER40 Art. No. 4310034026 with sealed collet ER40 - Ø25 Art. No. 4331354025
- **NOT compatible with milling cutter holder DIN 6359 (Weldon holders), cutting edge diameter must be smaller than shank diameter**

### Toodle Blue high-speed spindle

- **Coolant pressure at the spindle: 10-60 bar**
- Coolant-driven
- Supplied without bearings and turbine

**SARA® Hydraulic clamping system HYDRO-FIX**

**Hydraulic clamping system for boring bars and powered tools**

The system is attached and clamped with just one screw. The clamp engages evenly with the workpiece and this increases the tool service life. The hydraulic clamping system absorbs and reduces vibrations, and thus increases the surface quality.

The equal and complete clamping of the shank significantly reduces the vibration amplitude.

**HYDRO-FIX** clamps simultaneously in both directions, the tool and in the tool holder.

- Reduced vibrations
- Increased cutting speeds and/or feed rates
- Improved surface quality
- Increased tool life
- Quick and easy to handle
- Recommended shank tolerance h7
- Recommended bore tolerance H7

powered by ETP

**For boring bars**

## SARA® Collet holder for DIN 6499 collets (ER)

- Surface hardness 58 - 60 HRC
- Core strength HV 950 N/mm<sup>2</sup>
- Case depth 0.8 mm ± 0.2 mm
- Fully burnished and precision-ground
- Additional versions available on request
- When selecting collets, type B is preferable.

### Type E4, straight holding fixture with collet

## ATORN® Precision drill chuck with spur gear system

- **Clamping via spur gear system**
- **Suitable for clockwise and anti-clockwise rotation**
- Short clamping and retrofitting times
- Very short design
- For CNC lathes, for drilling, reaming, countersinking, thread cutting

### VDI tool holding fixture, DIN 69880

- Central coolant supply

## ATORN® Quick-change tool holders

- Profile-ground, toothed central body attached to the lathe support along with the base body
- The base body can accommodate an unlimited number of interchangeable holders for turning or drilling tools, one after the other.
- 40 different steel holder angle settings possible
- Repeatability ± 0.01 mm

## PARAT Quick-change tool holder

- For lathes
- Precise manufacture due to high precision and indexing accuracy (0.005 mm)
- Various production options (40 tool positions, 9° spacing possible)
- Quick height adjustment via adjusting screw
- Extremely flexible due to modular design
- Selecting the correct revolver head depends on the following parameters:  
lathe drive power, tool slide width C, turning tool height A

**Assembly service  
on request**

### 4-place revolver head

- Supplied with cranked box spanner and chuck key

50	M24	69,85	80	97,50	25	6	101,75	35	37,7	30,0	11,5	47	35,5	3,2	42	25,7

### Steep-taper shanks DIN ISO 7388-2 J / MAS 403 BT

SK	G	d1	d3	d5	l1	l2	l3	l5	l6	a	b
30	M12	31,75	46	12,5	48,4	22	16,3	7,0	24	2	16,1
40	M16	44,45	63	17,0	65,4	27	22,5	8,2	32	2	16,1
50	M24	69,85	100	25,0	101,8	38	35,3	11,0	47	3	25,7

### Hollow taper shank DIN 69893 shape A (HSK-A) with internal coolant supply

HSK	b2	b3	d2	d4	d5	d6	d9	f1	f2	f3	l1	h1
40	9	11	30	34	43	45	25,5	20	35	16	20	17
50	12	14	38	42	43	59,3	32	26	42	18	25	21
63	16	18	48	53	55	72,3	40	26	42	18	32	26,5

### The different forms of hollow-taper shanks DIN 69893 (HSK)

#### Shape A - Automatic tool switching

- Central coolant supply
- **Additional T**, a slot in the taper is a tighter fit

#### Shape B - As shape A, but with enlarged collar

#### Shape C - Central coolant supply

- without gripper groove

#### Shape D - As shape C, but with additional coolant supply via the collar

#### Shape E - For HSC machining

- Central coolant supply
- without carrier grooves, with gripper groove

#### Shape F - As shape E, but with enlarged collar

Depending on the design type, a coolant transfer pipe may be required for some machines with an HSK holding fixture. Please observe the machine manufacturer's information.

## SARA® Assembly system

- Aluminium housing
- 4 x 90° swivel-mounted
- Steel modular tool holders
- Quick and easy replacement of holding fixtures
- High flexibility
- Positive-locking fixing of the tools
- No damage to cone tip
- **Interchangeable adapter for polygon shank according to DIN 26623-1 also available**

### Assembly system

Designation	art.no.	€
Basic unit, 4 x 90° swivel-mounted for interchangeable adapter	<b>438180 0001</b>	<b>183,50</b>
	4136	

438180 0001

### Interchangeable adapter

- For DIN 69893 Form A (HSK-A)

Designation	art.no.	€
Tool holder HSK 40	<b>438382 0040</b>	<b>178,-</b>
Tool holder HSK 50	438382 0050	178,-

## SARA® CNC foam stand for tool holders

- For careful, space-saving storage and arrangement of tool holders
- Made from EPP (expanded polypropylene) particle foam
- Oil, acid and coolant resistant, shock and fracture-proof
- Low unladen weight, easy to clean
- Holders can easily be cut to size and customised with a band saw
- Holders can be joined together easily and securely with a glue gun
- Supplied without tools

### Foam tool holder stand

Non-rebound ...

... it's the tool.

**ATORN®**  
Performance demands quality

## bedrunka+hirth CNC stand for tool holders

- For storing and arranging tool holders
- Can be flexibly equipped with various inserts (805030....)
- **Unless otherwise instructed, we supply the colour RAL 7035 (light grey)**
- **Two-colour CNC stands can also be ordered (see illustration)**
- **The standard colours shown below are available at no extra cost**
- **Supplied without inserts and tools**

### Tool holder stand

- Our modular system offers you a wide range of options
- 1 box with screw-fixed sides, including handles
- Without tools or inserts

## bedrunka+hirth Tool inserts

- The insert is clipped into the system by means of a snap-fit closure (clip), and its spacing can easily be changed in increments of 25 mm at any time, without tools
- **Made from oil-resistant, shock-proof and fracture-proof ABS plastic**
- **Compatible with all Bedrunka+Hirth CNC storage and transport systems**
- Protective mounting and centring of tool holders
- Optimum use of space thanks to individually adjustable plastic inserts
- Functional modular system
- Knobs prevent tool holders from "adhering" to the surface of the inserts
- All tool sizes can be combined

### Tool inserts

- made of shock-proof, oil-resistant ABS material

## ATORN® Pull studs

- For tools with a steep-angle taper in accordance with DIN 69871 and JIS B 6339 (MAS-BT)
- All pull studs made from 16MnCr5, case hardened to HRC 58 ± 2
- Soft thread and bore, burnished and ground
- **Pull studs with O-ring = sealed**
- Other versions available on request (machine model must be specified)

**ALBRECHT** Precision drill chuck SBF-plus  
Präzisions Spannfutter

- **With mounting shank**
- Compact design
- High stability and high true-running accuracy
- **For clockwise rotation**
- **Advantage:** The SBF-plus drill chuck is a total of 21 mm shorter than two-part systems consisting of a taper and drill chuck.
- Version with diamond-coated clamping jaws available on request

**Morse taper holding fixture**

## ATORN® NC short drill chuck with worm gear

- **Clamping by means of an integrated worm gear**
- Clamping range 1.0 to 16.0 mm
- High true running accuracy, max. 0.03 mm
- **Suitable for clockwise and anti-clockwise rotation**
- Long service life, wearing parts hardened and ground
- Balanced up to 7000 rpm With a residual imbalance of max. 40 g/mm
- Supplied with hexagonal key
- Max. permitted rotational speed with balanced tool 35,000 rpm

**Clamping range 1.0 to 16.0 mm  
with internal coolant supply**

### DIN 69893 ISO 12164-1 (HSK-A)

## ATORN® NC short drill chuck with spur gear system

- **Clamping by means of a spur gear system**
- **Suitable for clockwise and anticlockwise rotation**
- True-running accuracy 0.02 mm
- Short clamping and retooling times
- Very short design
- For drilling, reaming, countersinking, thread cutting and simple finishing work on machining centres and CNC lathes
- Pre-balanced to G 6.3 at 25,000 rpm
- Max. permitted speed with balanced tool 35,000 rpm
- Max. permitted speed with unbalanced tool 7,000 rpm

**Clamping range 0.5 to 16.0 mm**

## SARA® Milling cutter extension SARAmicro

- For holding tools with a clamping surface in accordance with DIN 1835 B (shank Ø 6 - 20 mm)
- Extremely slim design allows standard tools to be extended without the need for special tools
- Extremely stable due to combination clamping
- True-running accuracy: 5 µm
- **Use:** In standard tool holding fixtures of appropriate diameter (16 / 20 / 25 or 32 mm)
- **Note:** To ensure that the tool is correctly clamped, ensure that the clamp is properly seated in the hole!

## ATORN® Precision ER collet chuck

- **30° ground trapezoidal thread with special anti-friction coating**
- Up to twice the holding forces of conventional collet chucks are possible thanks to lower friction when tightening the nut and due to the collet being seated entirely inside the chuck cone.
- Resistant to temperature fluctuations and fully suitable for dry processes and hard milling up to 200 °C.
- Clamping forces are distributed evenly across the entire cylindrical surface, and optimum radial force absorption produces perfect surfaces
- Excellent damping properties
- Increasing the chuck body to the diameter of the clamping nut creates enormous stability without any protruding contours.
- **Extremely high concentricity and precision, 3 µm**
- **Pre-balanced to G 2.5 at 22,000 rpm**
- **Leak-proof up to 80 bar with radially sealed collets**
- **For all GER collets**
- **Supplied with clamping nut**
- **Please order roller chuck key separately**
- **Torque wrench recommended**

**True-running accuracy 3 µm  
incl. clamping nut**

### DIN 69893 HSK-A, incl. clamping nut

**FAHRION® CENTRO|P precision ER collet chuck**

- **30° trapezoidal thread**
- With ground, extra-long double guide compared to 60° V-thread in conventional collet chucks
- Coated clamping nut reduces friction when tightening the nut
- Exact nut centring to minimise imbalance
- **Up to 100 % higher holding forces** compared with conventional collet chucks
- **Pre-balanced to G 2.5 at 25,000 rpm**
- **Entirely suitable** for dry processes and hard milling
- Insensitive to temperature fluctuations up to 200 °C
- **Leak-proof** up to 80 bar, cooling possible along the cutting edge
- **Extremely high system concentricity and precision of 3 µm achieved with a 2 µm GER-HP collet**
- **Supplied without clamping nuts or a chuck key, please order separately!**
- Slim and conical versions available on request

**True-running accuracy 1 µm**

**DIN 69893 type A (HSK-A)**

- Internal coolant supply
- When machining with internal coolant supply, a coolant transfer pipe with art.no. 431011... should be used

## ALBRECHT Präzisionsspannfutter Micro precision chuck AMC

- Ideal for micro-tools
- Clamping range 1.0 to 6.0 mm
- Optional peripheral or central cooling
- Improved damping compared with shrink-fit technology
- Slim protruding contour D1 = 13.5 mm
- Perfect concentricity < 3 µm for 2.5 x D
- **Pre-balanced to G 2.5 / 25,000 rpm**

## diebold Power chuck UltraGrip®

NEW

- Optimised radial run-out thanks to single-piece base body
- Maximum clamping force and stability thanks to clamping via rotary clamping nuts and needle bearings, thus clamping force of up to 4000Nm depending on  $\varnothing$
- High precision and balance quality
- Flexible use thanks to reducing bushes
- Vibration-damping effect thanks to size and multi-part design
- Maximum protection against milling tools being extracted
- Internal coolant supply up to 80 bar suitable
- Maintenance-free technology
- Supplied without chuck key
- **balanced G2.5 / 20,000 rpm**

## diebold Power chuck UltraJet® 3.0

NEW

The **UltraJet® 3.0** power chuck is an innovative combination of the established **JetSleeve®** principle and the **UltraGrip® 3.0** power chuck. When using the **UltraJet® 3.0** it is almost impossible to run through the chips during heavy machining, which results in even higher cutting data and considerably longer tool service lives. The coolant supply is channelled at high pressure through the **UltraJet® 3.0** mount and through the advanced nozzle configuration onto the cutting tool. The Venturi effect keeps the mixture on the tool cutting edge, irrespective of rotational speed.

- Optimised radial run-out thanks to single-piece base body
- Maximum clamping force and stability thanks to clamping via rotary clamping nuts and needle bearings, thus clamping force of up to 4000Nm depending on Ø
- High precision and balance quality
- Flexible use thanks to reducing bushes
- Vibration-damping effect thanks to size and multi-part design
- Maximum protection against milling tools being extracted
- Internal coolant supply up to 80 bar suitable
- Maintenance-free technology
- Supplied without chuck key
- **balanced G2.5 / 20,000 rpm**

High-gloss polished...

... extremely sharp.

**ATORN®**  
Performance demands quality

## Reducing bushes

- **Slotted**
- **Mechanically sealed up to max. 80 bar**
- Suitable for hydraulic expansion chucks and power chucks
- **Seal only suitable for hydraulic expansion chucks**
- Without dirt groove
- For reducing clamping ranges
- For drilling, reaming and milling
- True running accuracy < 3 µm (at 2.5 x d)
- **Version with coolant bores available on request**

## HAIMER® High-precision chuck HG

- Straight shank tools clamped with a high level precision using HG collets
- Very well suited to high-speed machining
- Taper angle tolerance quality AT3
- Finely balanced to G 2.5 at 25,000 rpm
- **True-running accuracy: 3 µm**
- Supplied with clamping screw and pull-out hook, no collet

### DIN 69893-1 HSK-A

## SARA® Hydraulic expansion chuck HYDRO-Grip HD

powered by ETP

- HSK 63 and ISO 40 pre-balanced to G2.5 / 25,000 rpm
- HSK 100 and ISO 50 pre-balanced to G2.5 / 14,000 rpm
- True running accuracy < 0.004 mm at 2.5 x D
- Tool shank quality h6 or h7
- Also suitable for reducing bushes
- Rigid construction and high clamping force for heavy-duty machining

## ATORN® Hydraulic expansion chucks

- Flexible thanks to the use of reducing bushes
- True running accuracy, maximum 3 µm
- **Balanced to G 2.5 at 25,000 rpm**
- Optimum operating temperature 20-50°C; not for use above 80°C
- Coolant pressure max. 80 bar
- Adjustment range 10 mm
- **Additional shank designs and AD/AF version available on request**
- Supplied with hexagonal T-key

## ATORN® Hydraulic expansion chuck, ultra-slim

Thanks to an innovative production process, the ultra-slim hydraulic expansion chuck combines the benefits of an expansion chuck and those of a shrink-fit chuck in a single product.

- Exceptionally high clamping forces
- Very high temperature resistance
- **Chuck remains accurate at high temperatures (up to 120 °C)**
- Designed with the slim shape of a shrink-fit chuck - suitable for use with tight protruding contours
- Very good damping
- Max. true running accuracy < 0.003 mm
- Tool changes carried out as with an expansion chuck, no need for additional equipment
- Versatile applications with reducing bushes
- **Pre-balanced to G 2.5 at 25,000 rpm**
- With Balluffchip bore

### DIN 69893 HSK-A

**ATORN® Tool mounts with levelling****INFO****for use in machine spindles with planar support**

- high rigidity due to the planar support between spindle and tool mount above the collar
- planar support ensures axial positioning accuracy
- suitable for high rotational speeds, spindle expansion (through centrifugal forces) have no further influence on the tool mount in axial direction
- considerable decrease in vibration through traction on the taper/planar support
- Increased service life in cutting tools

**TRACTION THROUGH TAPER/PLANAR SUPPORT**  
compared with conventional tool mounts

**FULL-SERVICE CONTACT**  
Taper and planar support

**ATORN® Transverse slot shell-type milling cutter arbour with planar support**

- **Pre-balanced to G 2.5 / 25,000 rpm**
- Taper angle tolerance quality < AT3 in accordance with DIN 7187
- Max. true running accuracy < 0.005 mm
- Internal coolant supply
- Case hardened to HRC 60 ± 2

**DIN ISO 7388-1 AD (DIN 69871 AD)**

## ATORN® OZ collet chuck

**DIN  
6391**

- For DIN 6388 collets
- Pre-balanced to G 2.5 / 25,000 rpm
- Alloyed case-hardened steel with a core tensile strength of min. 950 N/mm<sup>2</sup>
- case-hardened to HRC 60 ± 2 (HV 700 ± 50), case depth 0.8 mm ± 0.2 mm, burnished
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080, max. true running accuracy < 0.005 mm
- Supplied with clamping nut
- Additional shank designs and AD/AF versions available on request
- Suitable hook spanner under Article No. 701550....

### DIN 69893 type A (HSK-A)

- Internal coolant supply
- When machining with internal coolant supply, a coolant transfer pipe with art.no. 431011... should be used

## ATORN® ER collet chuck

- For DIN 6499 ER collets
- Pre-balanced to G 2.5 / 25,000 rpm
- Alloyed case-hardened steel with a core tensile strength of min. 950 N/mm<sup>2</sup>, case-hardened to HRC 60 ± 2 (HV 700 ± 50), case depth 0.8 mm ± 0.2 mm, burnished
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080, max. true running accuracy < 0.005 mm
- Supplied with clamping nut
- Additional shank designs and AD/AF version available on request
- ER16 / 426E\* tool holding fixtures supplied with hexagonal nut

### DIN 69893 type A (HSK-A)

- Internal coolant supply
- When machining with internal coolant supply, a coolant transfer pipe with art.no. 431011... should be used

## ATORN® Shell-type milling cutter arbour with transverse slot

**DIN  
6357**

- with enlarged collar diameter and coolant mounts
- pre-balanced G 2.5 / 25,000 rpm
- alloyed case-hardened steel, tensile strength at core min. 950 N/mm<sup>2</sup>
- case-hardened to HRC 60 ± 2 (HV 700 ± 50), case depth 0.8mm ± 0.2mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- max. True running accuracy < 0.005mm
- Supplied with carrier blocks and milling cutter retaining screw
- **Additional shank designs and AD/AF version available on request**

### DIN 69893 type A (HSK-A)

- Internal coolant supply
- When machining with internal coolant supply, a coolant transfer pipe with art.no. 431011... should be used
- \* = Also with four DIN 2079-compliant threaded bores for holding cutter heads

**ATORN® Transverse slot shell-type milling arbour, vibration-dampened****NEW**

- Pre-balanced to G 2.5 / 25,000 rpm
- Vibration-dampened due to mounted heavy metal core
- Shank hard overturned for corrosion protection and improved smooth running
- Straight version
- With coolant bores and enlarged contact surface
- All functional surfaces – such as taper, contact surface and holding pin – ground
- Milling cutter retaining screw with INBUS screw and fine thread ring for increased clamp force
- Increased working safety thanks to pressed-in driving pin without detachable screws

**DIN 69893 ISO 12164-1 (HSK-A)**

**Cutter retaining screw for milling cutter arbours**

- For milling cutter arbours, holding fixtures for cutter heads and milling cutters with transverse slots
- The different pitches of the two threads on the threaded bolt create a strong locking effect. The milling cutter is securely clamped without a major exertion of force, tube extensions or hammer blows.

## ATORN® Combination shell-type milling cutter arbour

**DIN  
6358**

- For milling cutters with longitudinal or transverse slots
- Pre-balanced to **G 2.5 / 25,000 rpm**
- Alloyed case-hardened steel, core tensile strength min. 950 N/mm<sup>2</sup>
- Case-hardened to HRC 60 ± 2 (HV 700 ± 50), case depth 0.8 mm ± 0.2 mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- Max. true running accuracy < 0.005 mm
- Delivery incl. fitting key, follower ring and **tightening bolt without coolant bore**
- **Additional shank designs and AD/B versions available on request**

### DIN 69893 type A (HSK-A)

## diebold Innovations in shrink-fit technology

### New units with innovative temperature control and automatic cooling

Diebold Series US 1100 shrink-fit units are available in both a horizontal and a vertical version. If the units are equipped with **pyrometer control**, the shrinking process runs under controlled temperature. The pyrometer technology in the coil ensures direct temperature monitoring. A world-first solution for more reliable and gentle tool shrinking (in and out).

The temperature is measured directly on the shrink-fit holder and automatically controlled during the shrink-fit process by way of **TempControl**. This is revolutionary, as until now all conventional shrink-fit units have controlled the shrink-fit process indirectly via stored parameters but the actual temperature of the shrink-fit unit was unknown.

### US 1100 with automatic TubeChiller cooling of the tool holder.

With the TubeChiller we offer you a fully-automated solution for the optimal shrinkage and automatic cooling of tools. This technology was developed to combine our US 1100 Series shrink-fit units with the automatic cooling of the TubeChiller.

Video on YouTube channel

### Advantages of the Diebold shrink-fit technology

1. US 1100 shrink-fit unit with pyrometer control for automatic temperature recognition
2. Horizontal and vertical units cover all applications
3. TubeChiller for automatic "hands-free" cooling
4. Gentle shrinking, which means no overheating of the shrink fit holder, for long service life of your shrink fit holder
5. Finely-tuned parameters for shrinking in all shrinking units
6. High-quality stainless steel shrink fit holder
7. No increase in tolerances through artificial ageing of the material
8. Thus higher quality and longer usability of the high accuracy
9. Production in fully-air-conditioned hall, quality assurance in Grade 2 measurement rooms

Following the shrinking process, the cooling pipe moves upwards from the TubeChiller while the coolant rises in the cooling pipe and flows around the tool in a circle. Through this movement the induction coil is automatically returned to its start position without any additional drive required. Once cooled, the cooling pipe is lowered again, the liquid flows back into the tank in the sub-structure and the tool mount is dried efficiently with compressed air.

## diebold Inductive shrink-fit unit ThermoGrip MS502-P

- Gentle and targeted heating thanks to parameterised generator output
- Simple and secure handling
- Also suitable for standard chucks, Ø 3 to 16 mm
- Gentle heating thanks to controllable generator output
- Low heat output, cooling using air cooling unit is sufficient
- Only suitable for carbide shanks
- Supplied with 4 shielding rings and protective gloves, no tool holder

# diebold Inductive shrink-fit unit ThermoGrip US1 100, with pyrometer coil

NEW

The pyrometer coil also permits automatic and direct temperature control of the shrink-fit holder during heating. This prevents burning the shrink-fit holder. The quick and reliable shrinking process requires no prior identification of the shrink-fit holder.

- Shrink length approx. 500mm
- Shrinking of SC shanks measuring Ø3 - 20mm and HSS steel shanks measuring Ø 6 - 32mm
- Manual shrink-fitting possible
- Contour-independent cooling, cleaning and preserving can be carried out when used together with the ATORN cooling station
- **Supplied with 5 ferrite discs, protective gloves and pyrometer coil**

## diebold JetSleeve 2® ThermoGrip® shrink fit holders

- Revolutionary solution for mould engineering and HSC machining
- Standard version suitable for air and cooling lubricant, versions for minimum volume lubrication available on request
- The coolant is fed via various nozzles directly to the cutting edge. Chips are blown away and not run through.
- Up to 300 % higher endurance
- No surface scratching by chips
- Optimum tool holder cooling right through to the cutting edge
- Innovation in the JetSleeve 2®  
Rotating chuck with media duct, the milling machine does not need to be retrofitted  
.Pressure is built up in the nozzle unit, and the flow effect from the nozzles keeps the coolant jet on the milling cutter shank at all times. JetSleeve chucks can be used on all conventional milling machines with internal coolant supply
- Suitable for all agents: air, minimum volume lubrication, cutting fluid
- Energy-efficient and environmentally friendly
- Shrinking with screwed-on nozzle cover possible

## ATORN® Shrink-fit chuck extension

- For extension and reduction to suit smaller diameters
- Slenderness ratio 4.5°
- For shank tolerance h6
- Tool stop screw with 10 mm adjustment range

## ATORN® Shrink fit holding fixtures 3°, slim version

- High torque transfer
- High true running accuracies 0.003 mm
- 3° range, slim version
- High contour flexibility
- Heat-resistant mild steel
- Further shank designs available on request
- **Balanced to G 2.5 / 25,000 rpm**
- With Balluffchip bore

### HSK-A DIN 69893

- Internal coolant supply
- When machining with internal coolant supply, a coolant transfer pipe Article No. 431011... should be used

# Heavy machining

**Shrink-fit mounts with coolant bores for heavy-duty machining available on request!**

## ATORN® Shrink-fit holding fixtures 4.5°

- High true running accuracy of below 0.003 mm
- Highest dimensional accuracy of the workpiece
- High torque transfer
- 4.5° range
- High contour flexibility
- Heat-resistant mild steel
- **Balanced to G 2.5 / 25,000 rpm**
- With Balluffchip bore

### HSK-A DIN 69893

- Internal coolant supply
- When machining with internal coolant supply, a coolant transfer pipe Article No. 431011... should be used

## diebold ThermoGrip® Shrink fit collets TER

- Optimum concentricity < 3 µm
- Good changeover accuracy
- Maximum holding forces
- Excellent dimensional stability

### • Use in collet chucks

Standard ER chucks with standard clamping nuts can be used. The collet is coolant-proof, no dirt in the slots means no soiling to the clamping taper.

### Use in powered tool holders

Clamped as short as possible, extremely rigid, no unwanted movement of the cutting tool, maximum production accuracy

### Use directly in the machine spindle

High changeover accuracy, minimal imbalance, very short design

Use e.g. in collet chucks or powered tool holding fixtures

### Shrink-fit collets TER in accordance with DIN 6499

**ATORN**<sup>®</sup>  
Performance demands quality

## ATORN® Thread cutting machine

- **Electrically powered motor**
- 220 V electrical connection is sufficient
- For M2 - M14 steel threads
- For M2 - M16 aluminium threads
- Vertical and horizontal thread cutting
- Operating range - radius 75 mm to 885 mm
- Operating range - height 565 mm
- For holding quick-release inserts with Ø 19 (e.g. art.no. 44250519..)
- Supplied with a base tool holding fixture, an articulated arm for vertical thread cutting and a tilting adapter for horizontal thread cutting (**please order quick-change chucks or quick-release inserts separately**)
- **Automatic tool lubrication and pneumatic version available on request**

## SARA® Thread cutting device

- Manual thread cutting on hand-fed drills
- Maintenance-free, for use with right-hand and left-hand threads
- No need to reverse the spindle thanks to the integrated indexable thread
- Automatic shut-off by a low-wear ball system when the machine spindle is withdrawn once the thread depth has been reached
- Stopping arm must be secured against twisting before operation
- Supplied without inserts

## Tap clamping sleeve

- **Torsion-free design**
- Tap clamping sleeve for machines with a synchronous thread cutting mechanism
- **Use:** In conventional DIN 1835 B (Weldon) chucks, Thread cutting in hard-to-reach areas
- Synchronisation between speed and forward thrust, no slip between the sleeve and drill bit
- 100 % cooling at the cutting edge with internal coolant supply

## SARA® Thread cutting quick-change chuck

- Automatic insert locking
- **Flexible length compensation under compression and tension**
- For quick-release inserts with adjustable safety coupling
- Minimal residual torque prevents tap breakage
- For thread cutting on mechanical and digitally controlled radial drills as well as drilling and milling machines
- Further sizes are available on request

## ATORN® Thread cutting quick-change chuck for synchronous spindles

- **Minimal length compensation** thanks to damping element
- Secure clamping in quick-release inserts for ER collets
- Clamping screws to prevent the clamped tap from twisting
- For use on drilling machines and machining centres with synchronous spindles

**Also available for machines with minimum-volume lubrication**

### DIN 69893 type A (HSK-A)

# Machine tap

Page 231

**bilz ER synchro insert STA**

The **STA (Synchro Tapping Adaptor)** synchro insert was specially developed for ER collet holding fixtures and allows tapping and forming on machines with synchronised spindles.

- For ER collet holding fixtures and powered tools
- Compensation for synchronisation errors
- Minimal length compensation under compression and tension
- Minimal strain on the thread flanks
- Compact design
- Internal coolant supply suitable up to 50 bar
- Suitable for left-hand and right-hand thread
- **Only used standard clamping nuts in accordance with SO15488 (DIN6499)**
- **Not for sealed nuts or mini nuts**

**Synchro tool fixture STL**

- Base support for STH synchro tool head

## ROHM Precision clamp with quick adjustment

### • Quick adjustment

- Maximum accuracy
- Made from alloyed tool steel, hardened and finely ground on all sides
- Easy to clamp and release with a hex key
- Clamping jaw can be adjusted in steps; engages automatically
- Pull-down effect
- Suitable for grinding, milling and engraving machines, jig boring machines, measuring and inspection work, and any production processes that demand the highest clamping accuracy

### Horizontal V-block

Jaw width mm	Clamping width mm	Jaw height mm	Total height mm	Total length mm	Perpendicularity mm	Parallelism $\mu\text{m}$	art.no.	€

## SARA® Precision grinding and inspection vices

### • With spindle

- Entirely made from steel, precision-ground on all sides, can be used on all four sides, hardness HRC 58 - 62
- Can be used on grinding machines, jig boring machines and other precision machinery
- Also for measuring and inspection work
- Tolerance 0.005 mm

Jaw width mm	L mm	Jaw opening mm	Jaw height mm	art.no.	€

4152

## SARA® Precision sinus vice

- Machining and checking of surfaces and angular surfaces
- Angle adjustment in 2 axes via Vernier scale and precision set screw
- Can be rotated horizontally by 360°
- Can be swivelled vertically by 2 x 60°
- Scale reading from Vernier 3'
- Tool steel, through-hardened, fully precision-ground
- Perpendicularity: 0,005/100 mm
- Parallelism: 0,005/100 mm

Jaw width mm	Clamping width mm	Jaw height mm	L mm	Height mm	Weight kg	art.no.	€

## ATORN® Drilling machine vice with quick jaw adjustment

- Narrow version
- For quick and secure clamping, particularly when machining workpieces for mass production
- With guideway, **base clamping and lateral clamping devices**, also suitable for light milling work
- **One-handed operation** - quick jaw adjustment and clamping with just one lever handle
- Flat, robust design
- Max. clamping force 10 kN
- Positive-fit locking
- Large clamping range
- Body made from special cast iron
- Supplied with guideway and fixing materials

Jaw width mm	Clamping width mm	max. clamp force kN	L mm	H mm	H1 mm	Weight kg	art.no.	€

Performance demands quality

## ATORN® Cover for boreholes and screw heads with hex key

NEW

- prevents chips from sticking and cooling lubricants from accumulating in screw head and countersink
- increased occupational safety through working and cleaning with compressed air
- faster set-up due to less cleaning effort
- patented reusable system
- suitable for the clamping systems in the catalogue
- special sizes available on request

### Aluminium cover

Description	art.no.	€
10 x cover M10	438110 0010	76,30

## ATORN® Clamping jaws with positioning pins

- Fast and precise machining of various workpieces
- Retooling in seconds for various machining tasks
- Loose underlays are no longer needed, nor is time-consuming cleaning
- Stable and robust lightweight design
- Also suitable for high clamping forces.
- Compressed air flow via vents on both front faces
- Recommended air pressure: 5.5 bar
- Closed on all sides when installed, so very low-maintenance
- Premium tool steel, hardened, ground and treated with a special oxidation process

## High-pressure machine vice

- **Mechanical/mechanical** or **mechanical/hydraulic**
- Base body and clamping jaw holder made from high-quality ductile iron, GJS 70
- Clamping precision within 0.01 mm at the same clamping pressure
- Both clamping areas can be roughly set in a matter of seconds via bolts (covered clamping areas)
- Aligned on the work table via longitudinal or transverse slots (20H7) in the base surface
- All wearing parts, clamping jaws and guideways hardened and ground (60 HRC)
- Multiple vices of the same height are available with a **pair accuracy of 0.01 mm**
- Spindle can be optionally replaced with a pneumatic/hydraulic version
- Supplied with 1 pair of smooth jaws and 1 hand crank, **without swivel base**

**ROEMHELD EuroLine NC high-pressure machine vice**

- **Type EL, mechanical-hydraulic**
- **Dependable and cost-effective**
- Threaded bores for workpiece stops in both sides of the fixed jaw as standard
- Replaceable, hardened clamping jaws (1st side smooth, 2nd side grooved)
- Guideways hardened and ground
- Desired clamping range can be roughly pre-selected via socket pin
- Spindle and power transmission integrated and protected inside the slide body
- Straightforward maintenance and cleaning: the slide body can be removed in a single action
- For tool and mould making, fixture construction, production

**ROEMHELD NC NC high-pressure machine vice**

- **Type NC, mechanical-hydraulic**
- **Versatile and flexible**
- Longitudinal and transverse slots as standard for quick positioning
- Slots and threaded bores on slide and fixed jaw for holding standard and special large-span jaws
- Threaded bores on both sides for workpiece stops
- Clamping edge for clamping claws
- Guideways hardened and ground
- Desired clamping range can be roughly pre-selected via socket pin
- Resistant to deformation thanks to the new bottom cross section and new fixed jaw
- Mounting hole layout for extra high clamping jaws
- For tool and mould making, fixture construction, production
- Supplied with standard smooth/grooved indexable jaws, hand crank, operating manual
- **Longer versions and clamping force monitoring available on request (cannot be retrofitted!)**

Type NCH, hydraulically operated - available on request

**ROEMHELD** KNC NC high-pressure machine vice  
HILMA • STARK

- **KNC type, mechanical-hydraulic**
- **For the toughest requirements**
- Fully encapsulated spindle and power transmission, reliable protection against chips
- With stepped indexable jaws as standard, smooth rear side, with connection bores for almost all HILMA clamping jaw systems
- Desired clamping range can be roughly pre-selected via socket pin
- Locking device for mechanically clamping sensitive workpieces (optional accessories)
- All-steel design with internal slide guide
- 20 H7 cross slots for horizontal clamping

## RÖHM RKE NC high-pressure machine vice

- Particularly suitable for use on machining centres
- Horizontal, lateral, or vertical clamping with a base plate, for example as a DUO clamping tower (back to back)
- **Size 92**  
**Mechanical-hydraulic** clamping system with power transmission, manually operated.
- **Size 125, 160**  
**Mechanical-mechanical** clamping system with power transmission, manually operated
- Base body and all guides are hardened and ground on all sides
- Long clamping slide with transverse slots, hardened on all sides, functional surfaces ground
- Drive spindle with pre-set clamping force
- Clamping surface for clamping claws
- Central lubrication fitting for easy guide and spindle thread lubrication
- Stable chip guard prevents chips from entering into the body
- Threaded bores for holding all RÖHM flat clamping jaws with jaw widths of 125 / 160 mm
- Angle drive connecting thread

## ATORN® 5-axis compact clamp

- Body made from ductile iron, GJS 600
- Guideways hardened and ground
- Clamping force 40 kN at 110 Nm
- Patented quick adjustment of the clamping width
- Enclosed spindle
- Secure holding forces due to re-tensioning spring package
- Supplied without crank or torque wrench
- **Suitable torque wrench: article no. 702602 0004 (to be used without sockets)**

# ATORN® 5-axis combination clamp AZS-100

- **Centring vice and fixed jaw clamp in one**
- quick and easy spindle retooling
- mechanical clamping system
- high clamp force with low tightening torque
- very high basic rigidity, allows low-vibration machining
- all guide surfaces hardened and ground
- integrated boreholes for zero-point clamping systems
- Adapter available on request
- Clamp force data and scaling for guidance on basic body
- extensive jaw range
- **Supplied with 1 x grip jaw set 3.5mm, 1 short shaft and 4 clamping jaws**

### Combination clamp AZS-100

**ATORN® 5-axis clamping system TCA70**

**With central clamp for 5-sided machining.** Thanks to the design and central telescopic spindles, the protruding contours remain unchanged regardless of the clamp width. Excellent accessibility of all sides is guaranteed. The series-standard quick-change jaw system reduces tooling times and increases flexibility.

- Ideal for use on 5-axis machining centres
- Conventional clamping and grip clamping possible
- Telescopic spindle, protruding contour remains unchanged
- Central, simple programming without zero offset
- Material allowance is distributed symmetrically
- Repetition precision 0.01 mm
- Centring accuracy 0.02 mm
- Workpiece accessibility irrespective of the clamp width
- Symmetrical design = workpiece remains central and parallel
- Workpiece support height = 192 mm
- Quick-change jaw system, toolfree jaw changing thanks to quick-release lock
- Reversible jaws: for min. / max. clamp width with one pair of jaws
- Constant clamp force thanks to low-maintenance telescopic spindle
- Supplied as standard with locating bores for zero-point clamping system, pitch 200 mm
- Work table attachment also with through-bolts / fitting screws
- In 50 / 63 mm grid or clamping claws
- Integrated scale ring for fine adjustment of the central position
- Clamp force 30 kN at 45 Nm linear
- Operation with torque wrenches
- **Supplied with**
  - 1 ATORN TCA70 without jaws
  - 1 support plate for transportation
  - 1 hand crank for pre-setting

## ATORN® Accessories for 5-axis clamping system TCA70

### Clamp width adapter

- Suitable for TCA70-M
- Clamp width reduction from 9 mm
- Made from case-hardened steel (burnished)

NEW

Clamping range	art.no.	€
9 - 165 mm	459715 0070	239,-
	4172	

### Stepped jaws, carbide-coated

- For clamping workpieces to be machined in parallel
- Clamping surfaces (step) with additional carbide coating to guarantee secure clamping
- Price per unit

#### Clamp width

Type 70K 9-135 mm

Type 70M 42-200 mm

Jaw width mm	Weight kg	art.no.	€
38	0.3	459701 0038	296,-
70	0.3	459701 0070	312,-
100	0.4	459701 0100	342,-
		4172	

### Grip jaws

- Minimal lost clamping edge of 4 mm
- Positive form fitting through the penetration of the pointed tips into the material without pre-shaping
- Integrated grip row, thus rigid vibration-resistant construction particularly in upright parts
- Additional clamping surfaces, ground on both sides
- Suitable for material strength up to 1000 N/mm<sup>2</sup>
- Price per unit

#### Clamp width

Type 70K 9-134 mm

Type 70M 42-199 mm

Jaw width mm	Weight kg	art.no.	€

70	0.6	459703 0070	375,-
		4172	

### Zero jaw

- Clamping of parallel, pre-machined workpieces
- Clamp width 0 - 69 mm
- Cylindrical pins as support surface; setting at heights of 176 mm and 191 mm possible
- Minimal clamping edge: 20 mm for height 176 mm, 5 mm for height 191 mm
- Material: case-hardened steel
- Includes 4 cylindrical pins 4x10 DIN EN ISO 8734
- Price per unit

Jaw width mm	Weight kg	art.no.	€
70	0.6	459705 0070	355,-
		4172	

**Grip insert for supporting jaw**

- for clamping raw parts
- also firmly holds soft materials with lower clamp force
- linear impression in the material ensures less deformation in soft materials
- lost clamping edge: adjustable from 3.7 to 5.2mm
- Grip height: adjustable from 2.6 to 4.1 mm
- for tools with ≤ 0.2mm / 100mm parallelism
- grip inserts suitable for materials up to approx. 1000N/mm<sup>2</sup> strength

Ø mm	Height mm	art.no.	€

## ATORN® 5-axis slide rail set 120 mm

- For stable, low-vibration machining
- 40 kN clamp force at 85 Nm tightening torque
- Positive-fit jaw mounting
- Coated spindle and spindle nut
- Spindle can be extended without tools
- Extendable to all required lengths
- Retooling in seconds
- Extensive range of accessories and jaws

## ATORN® Modular multi-clamping fixture

- Quick and precise workpiece clamping on vertical and horizontal machining centres, milling and grinding machines
- Standard clamping device for different workpieces
- Wedge clamps of various sizes can be used
- Allows different workpieces to be clamped in extremely confined spaces
- Multiple slide rails combined by means of a connection system, optimum length adjustment to the work table
- **Tombstones available on request**
- **60° toothing**

### Particular benefits:

- Perform numerous clamping tasks with one clamping system
- Can also be used on ATORN zero-point clamping systems
- All system components are compatible
- Easy-to-install stop system
- Cost-effective clamping system

### Multi-clamping slide rail sets

- Rail-mounted clamping elements
- Other combinations available on request

**SARA® Modular multi-clamping fixture**

- Mechanical clamping fixture with a modular design
- Accuracy: within 0.02 mm
- Base body made from hardened steel, 60 HRC
- Fully equipped for clamping four workpieces; can be optionally extended to a maximum of 9 clamping positions (see table below)
- Clamping jaws are 1 mm narrower than the base body, allowing lateral use of the clamp
- Also available with stepped jaws on request; prismatic jaws available as accessories
- **Supplied with** four tool stops, clamping claws, slot nuts, alignment blocks, lifting screws and a chuck key, one fixed jaw and four intermediate jaws

**ATORN® 3-place clamping pyramid**

**NEW**

- Includes centric clamping vice RS-Z
- Optionally with ATORN installation clamping module K20
- Prepared for zero-point clamping systems ATORN K20, AMF K20, Lang-Quick-Point 52 and Quick-Point 96, further adaptations available on request
- Space-saving and compact, very good accessibility for 5-axis machining
- Fewer tool changes thanks to multiple set-ups
- High efficiency due to shorter running times per workpiece (fewer tool changes)
- Shorter running times through optimisation of cycle times
- Reliable machining with maximum stability thanks to proven RS-Z centric clamping vices
- Improved automation utilisation with high profitability

User video

Example:  
Matsura MAM 72-35V with 40-fold pallet storage: original utilisation = 40 workpieces.  
The RS20.3P-310 enables unmanned clamping and processing of 120 workpieces.

- Supplied ex works, excluding packaging

**includes 3-pcs. centric clamping vices RS-Z**

# ATORN® 3-way clamping tower RS-T

- ultra-efficient, compact and space-saving
- high productivity thanks to considerably higher machine productivity during unmanned shifts
- fewer tool changes thanks to multiple set-ups
- max. parts size 100 x 100mm x variable length with a displacement circle of 350mm
- high efficiency
- prepared for ATORN ZPS K20 and Lang Quick Point 52
- **clamping jaws also suitable for embossing systems**
- **other adaptations for your machine tables available on request**

for ATORN ZPS K20 and Lang Quick Point 52

# Clamping with a vacuum

Innovative ATORN vacuum clamping technology

## When the focus lies on tooling time and safety

Vacuum clamping technology is particularly suitable for minimized setup time and process-safe clamping of flat workpieces with level undersides that are to be clamped and machined non-destructively.

For this we offer innovative and sophisticated solutions with many accessories – for optimum and individual clamping. When it comes to precision and you want to handle workpieces made of aluminium, non-ferrous metals, graphite, plastics, glass, wood, ceramic, titanium and steel, the ATORN clamping plate sets lay down an excellent foundation for the work. These sets allow firm and precise clamping of your workpieces, delivering in turn good results from milling or drilling.

Vacuum systems hold the workpiece fast through suction and provide an excellent grip. Using a Venturi tube or a vacuum pump has proven very useful here.

## Why you will achieve more with the ATORN vacuum clamping technology

One set, two options. This is what makes the new ATORN vacuum clamping system stand out.

The new low-cost entry into the vacuum clamping technology for short-term wins out through its use of the Venturi principle. The vacuum is created through a direct connection to the compressed air supply without a vacuum pump unit. For energy-saving continuous use in series production, a vacuum pump unit is advisable.

You can clamp indirectly by means of sandwich adapter mats or directly on a grid plate. The use of adapter plates or rubber adapter mats offers two important advantages:

- Producing break-outs in the workpiece machining
- Marked reduction of the clamping times, since, in comparison with fastening directly to the grid plate, no packing cords are needed

Variants:

- ATORN slot plate for clamping micro-components and workpieces with the most widely varied contours
- ATORN grid plates for clamping simple workpieces for heavy machining
- ATORN adapter mats for workpieces with and without break-outs

## ATORN® Vacuum clamping technology

### Grid vacuum plate sets with Venturi nozzles

- Can be extended with conventional vacuum pumps, making it suitable for wet machining

- For workpieces with simple geometric shapes
- Good seal: also suitable for rough (e.g. sawn) surfaces
- High holding forces
- Minor irregularities and concavities are sealed and compensated by flexible sealing cords

#### • Each set comprises:

- 1x vacuum grid plate with 12.5 mm pattern, incl. integrated Venturi nozzle
- Height-adjustable stop discs
- 4x clamping claws with slot width = 14 mm
- 3 m plastic hose with hose connection and quick-action coupling
- 10 m vacuum sealing cord, Ø 4 mm black
- Incl. silencer and shut-off valve
- 1x hose connection for conventional vacuum pumps

Type	Dimensions L x W x H mm	art.no.	€

4182

### Slotted vacuum plates

- For clamping workpieces on adapter mats and rubber holding mats
- For machining complicated workpiece shapes
- Very small workpieces can be clamped
- Workpiece positioning by height-adjustable eccentric stops
- **Supplied with** vacuum hose connector piece, connection element, assembly tool, aluminium clamping claws, rubber adapter mat (brown), 1 m vacuum hose with wire helix and quick-coupling plug

Type	Dimensions L x W x H mm	art.no.	€
MS1	300x200x48	<b>475089</b> 2030	1.279,-

4182

### Vacuum clamping system with adapter mats

- **For wet and dry machining, with vacuum pump, no Venturi nozzle**
- **For workpieces with openings**  
Construction with sealing cord, aluminium adapter plate and adapter mats
- **For workpieces without openings**  
Construction with sealing cord only, directly on the grid plate
- The modular construction allows multiple vacuum plates to be connected with overlapping grids.  
The operating vacuum is supplied to the individual plates via the connection elements.

#### • Each set comprises:

- 1x modular grid plate with 12.5 mm grid
- 1x aluminium adapter plate with 12.5 mm grid
- Set VM1: 10 blue adapter mats
- Set VM2: 9 blue adapter mats, 1 black
- Set VM3: 8 blue adapter mats, 2 black
- 4x clamping claws with slot width = 14 mm
- 1x assembly tool for replacing blind plugs
- 3 m vacuum hose with wire helix
- 10 m vacuum sealing cord, Ø 4 mm, black

Type	Dimensions L x W x H mm	art.no.	€
VM1	300x200x32.5	<b>475083</b> 3021	1.149,-

# Technology to get excited

The new ATORN zero-point clamping system fares well in any comparison

Experience the ATORN zero-point clamping system, which presents the advantages of its innovative and trend-setting characteristics in use.

## Advantages that lift the ATORN zero-point clamping system well above the competition

- **Use of different clamping fittings for maximum positioning precision:**
  - Zero-point fitting: Positions at the absolute zero reference point
  - Strut fitting: Fixes the remaining free axis in place
  - Undersize fitting: Is used exclusively for clamping and restraint
- **Two ways of setting different zero points**
  - Classic: The zero point is defined via the zero point fitting in combination with the strut fitting
  - Based on temperature effects: The zero point is defined via the centre axis by solely using strut fittings
- **System requires no maintenance**
  - Completely sealed system made of stainless steel to eliminate the need to maintenance when working
- **Advantages in use**
  - Absolute simplicity in use thanks to the large catchment tolerance and the non-jamming feed-in facility
- **Process safety thanks to advanced technology**
  - The characteristics of the 'three-cycle principle, form fit and a large ball diameter' further enhance the process safety. These characteristics optimally distribute the force, losing no effect in the process

## Advantages in use

### Large catchment tolerance

For the purpose of retracting a pallet into the clamping module, a pre-positioning of 6.5 mm or 12 mm is sufficient.

### Non-jamming

Non-jamming extension and retraction thanks to the ideal form of the clamp fitting

## Advantages in the technology

### Large retention, catchment and sealing forces

Size	Retention force (kN)	FCatchment/sealing force (kN)	
			hydr.
K 10.2	25	10	
K 20	55	20	

### Three-cycle principle

Force is distributed by way of a three-cycle principle. This avoids exert shear loads on the balls.

### Form fit

The balls are encompassed from three sides in a form-fit fashion. The forces are exerted evenly over the balls and are optimally spread out.

### Large ball diameter

Better distribution of forces thanks to larger ball diameter.

## Advantages in maintenance

### Rust-free – Robust – Suitable for industrial use

High-alloy, hardened tool steel. – This prevents corrosion. Robust, suitable for industrial use and with a long service life.

### No ball cage

The balls are placed freely in the ball duct and continuously reposition themselves. As the balls are not in a cage, it is a quite simple process to blow out dirt using air.

### Safety system

The system is absolutely process-safe. The clamping module can be opened at any time.

## ATORN® K10.2 and K20 installation clamping modules

- Hydraulic unlocking
- Hardened cover and piston
- Precision < 0.005 mm
- **Use:** Zero-point clamping system for optimised tooling times when clamping; for all areas of chip-forming and chip-free machining as well as the food, pharmaceutical and chemical industries.
- **Note:** Installation clamping modules boast high holding, pull-in and locking forces despite their extremely small dimensions. Hydraulic pressure is only required for releasing (min. 50 bar / max. 60 bar). The modules are mechanically locked when clamped. The advantage to this is the lack of inconvenient lines and of any risk of leaks.
- Available on request:
  - Installation drawings
  - Automation solutions
  - Also available as an individual flange version

## ATORN® K10.2 multi-clamping stations

- Hydraulic unlocking
- Precision < 0.005 mm
- Steel, unhardened
- The clamping systems are pre-equipped with attachment holes (for common table slot sizes 63, 100 and 125 mm) and positioning aids. The clamping stations are ready for immediate operation. Connections are pre-screwed.
- The clamping station with blow-out has 2 connections: 1 x hydr. opening, 1 x pneum. blow-out
- Installation drawings, further sizes and customised clamping stations for your machine are available on request.
- **Advantage:** Low overall height of just 36 mm

### Double clamping station

- For common table slot sizes 63, 100 and 125 mm

Retraction force/closing force kN	Retaining force N	Weight kg	art.no.	€
2 x 10 kN	25	14	459071 1002	1.939,-

## ATORN® Air hydraulic pump and connection set

- For opening hydraulic clamping modules or clamping stations.
- Compact, pneumatically operated hydraulic pump for single-acting circuits
- Integrated safety valve for regulating the hydraulic output pressure (factory-set to a maximum operating pressure of 60 bar)
- The expansion body in the oil tank enables the pump to be used horizontally and vertically.
- Connecting thread, air: G1/4
- Connecting thread, oil: G1/4
- **Note:** the pump is filled with a standard commercial hydraulic oil (HLP32) ready for use

1. Air intake,  
2. Hydraulic outlet

4195

## Eccentric clamps

- For fixture plates
- Eccentric head causes the clamping motion and clamping force (up to 27 kN)
- The hexagonal brass washer acts as a clamp
- Any workpiece shape can be clamped with positioning pins and one or two clamping screws
- Low height allows workpiece surfaces to be machined easily
- No need to consider the position of clamping claws in CNC programming
- Space-saving multi-clamping due to low height

It is easy and cost-effective to clamp parts of all shapes:

## Eccentric clamping screws

- **For T-slots**
- Connecting the normal clamping elements to slot nuts using eccentric screws (with brass hexagonal washers or fastening discs) allows workpieces to be clamped cost-effectively on work tables or clamping plates with T-slots.
- A screw secures the T-slot nut in the T-slot
- Low height; surfaces of flat parts can also be machined
- Rapid adjustment to various workpiece sizes and parts of any shape, no rectangular lateral surfaces required
- Clamping force up to 27 kN
- Supplied with brass washer and slot nut

## Pull-down clamping claw

- Pull-down effect
- For 14 mm, 16 mm and 18 mm T-slots, and for mounting directly on the fixture plate or work table
- M12 eccentric clamping screw for clamping force of 18 kN
- Body and clamping washer case-hardened
- Clamping washer with toothed edge for raw parts and smooth edge for machined parts
- The clamping washer adapts to the angular position of the workpiece, i.e. the workpiece does not have to be rectangular

4156

## Combination pull-down claw

- The pull-down effect ensures that the workpiece is secured to the support
- The front side is used for clamping, the rear side can be used as a stop
- Space-saving multi-clamping
- Clamping washer with toothed surface for raw parts and smooth surface for machined parts
- Preferably for mounting in a slot of width B (+0.05 mm)
- The engagement height of the clamping washer can be changed by the depth of the slot
- Body and clamping washer are case-hardened
- Supplied with fastening screws

## Clamping film

- For clamping workpieces that cannot otherwise be clamped due to their instability, shape or lack of magnetic properties
- The workpiece and film are heated to 85 - 95 °C (furnace, heating plate, hot air etc.)
- After cooling, the holding force is approx. 30 - 200 N/cm<sup>2</sup> depending on the type or supporting surface
- Allows machining on thin or difficult-to-clamp parts
- Can also be used to reinforce thin workpieces during machining
- Film can be used with steel, non-ferrous metals, glass, wood, most plastics and many other materials
- Contains no harmful chemicals

Description	art.no.	€
Clamping film, roll 250 mm x 7600 mm	475100 3076	229,-
Clamping film, roll 300 mm x 1500 mm	475100 3015	59,-

4156

## Double wedge clamp

- One clamping element simultaneously clamps two workpieces
- Space-saving multi-clamping reduces auxiliary processing times and therefore unit costs
- Cost-effective clamping fixture
- For round and rectangular parts
- Clamping force up to 27 kN
- The use of a support and clamping bar further simplifies the process of constructing clamping fixtures

## Pitbull anchor clamps

- Pull-down effect with clamping forces up to 50 kN
- Sharp-edged for raw parts (cast iron, forged, cut parts) or with a blunt edge to avoid clamping marks
- Space-saving
- Low height
- Compact design
- High clamping force
- Strong pull-down
- No protruding edges to interfere with tools
- Multi-sided machining
- Ideal for multi-clamping
- **Note:** Dimensions B and D are guideline values

## AMF Mini-Bulle flat clamp

- Hardened and tempered to a burnished shade
- h1 = at maximum T-slot depth in accordance with DIN 650
- To obtain low clamping heights with minimum slot depths, the clamp can be ground down by x mm
- Allows particularly flat workpieces to be clamped
- Clamping jaws have a wedge effect that ensures the workpiece is securely fixed to the work table
- Horizontal forces are absorbed by a screw corresponding to the slot size; this holds the clamp securely in position without damaging the table
- **Supplied in pairs**, boxed, complete with fastening screws (DIN 912, 8.8 / ISO 4762) and a hexagonal screwdriver (ISO 2936)
- Prices per pair

## Clamping bolts

- Secure, safe, precise and powerful clamping for practically any workpiece shape
- Also suitable as a clamping support
- Length tolerance class js6, ensures that clamping is parallel to the table
- Standard clamping range 8 - 40 mm, can be extended to a maximum of 87 mm using clamping screws
- Description:
  1. Clamping range
  2. Length (js6)
  3. Wrench size 18
  4. Clamping screw
  5. Clamping ring
  6. Diameter 22 mm
  7. Wrench size 36 mm
  8. Spacer washer

## AMF Side clamp

- M12 x 14, complete with slot nut
- Base body made from case-hardened steel, nitrided
- Tensioning hook made from case-hardened steel
- Tightening torque 75 Nm
- Attachment with screws, strength class 10.9
- Compact design
- Pull-down effect ensures that workpieces are securely and safely attached
- Increased plate tension for adding bores and slots
- Clamps plates laterally, allowing the full surface to be machined without any protruding contours
- Lateral thread allows a stop to be attached
- Can be used horizontally and vertically
- Reduced tooling costs
- Diverse and variable applications
- Can be used as a clamping element and as a fixed stop
- Moving the adjustment screw causes tensioning hooks to clamp the workpiece. At the same time, a pull-down effect is created on the supporting surface.
- Attaching a lateral stop enables the workpiece to be clamped repeatedly in the same position.

## Form-fit double wedge clamp

- Extra wide jaws, can be milled to fit the shape of the workpiece
- For securely clamping difficult parts
- Clamps unstable parts without distortion
- Space-saving
- Allows two workpieces to be clamped simultaneously
- Higher productivity due to reduced auxiliary processing times
- Ideal for machining centres as well as milling and drilling machines
- **Note:** A locking plate is used during form milling to ensure that the jaws remain in a stable position and vibration-free.
- Supplied with wedge clamp and screw

## AMF Heavy-duty clamping jaws

- **Reversible clamping jaws**
- High design with precise V-shaped guide
- Base body: Malleable cast iron
- Clamping jaws: Case-hardened steel
- Reversible clamping jaws with smooth side for machined workpieces and grooved side for raw clamping surfaces
- Robust clamping jaws with large clamping surfaces, ideal for laterally clamping high workpieces
- We recommend using two clamping screws to secure the heavy-duty clamping jaws to the work table! DIN 787 T-slot screws must be ordered separately for use as fastening screws (two per clamping jaw), depending on the slot width.

# Hydraulic expansion chucks

- Reduced-vibration tool clamping
- Increased tool endurance
- Reduced micro-nicks on the tool cutting edge
- High torque transfer
- High level of positioning accuracy and precision

## Mandrels

- Almost every workpiece has at least one bore. These are suitable for clamping the workpiece (turning, milling, drilling part) to allow machining on the second side.
- 5-sided machining
- Space saving design for multi-clamping
- Mandrel can be easily turned and milled to the desired diameter
- Easy to use

### For through-holes

- Fastening flange diameter is concentric to the clamping diameter
- Clamping screw, hardened and coated
- Supplied with 3 fastening screws (H)

## Compact clamp

- Compact design
- Clamping force up to 16 kN
- Special polyamide seal protects the inside from dirt
- Ideal access when machining
- Clamps workpieces quickly
- Supplied without chuck key or clamping screw

## AMF Clamp sets

DIN  
6314VDIN  
6316V

- With adjustable support screw
- Tempering steel, painted
- Complete with DIN 787 T-slot screws, nuts and washers
- Supplied without notched clamping lever, please order separately

## With stepped teeth

- Compatible with universal clamping supports 466047 0001-0002-0003
- The long version is designed for large spans due to wide slot spacing or greater workpiece clamping depths, e.g. on engraving machines.

Slot width mm	l mm	a mm	b2 mm	b3 mm	e1 mm	e2 mm	for screws	art.no.	€

## AMF Helical clamp

- Special cast iron
- Screw and threaded sleeve strength class 8.8
- Quick to use as a clamping unit
- Finely graded steps allow rapid adjustment for any workpiece height up to approx. 320 mm
- Requires little space on the work table thanks to the compact design

Model	a mm	H mm	S mm	C mm	L mm	B mm	art.no.	€

## AMF Clamping claw

- **Infinitely variable**
- Forged steel, hardened and tempered, galvanised
- Complete with DIN 787 T-slot screws, nuts and washers
- For quickly bridging various clamping heights with no additional supports
- Requires little space on the work table
- Designed for maximum loads
- Particularly suitable as a clamping device for cutting and stamping tools

## AMF Correcting wedge HERKULES

- **Height wedge**
- Centring hole  $\varnothing$  12 mm
- Ductile iron and steel hardened and tempered to a burnished shade, incl. ball attachment 466019 0001
- Correcting wedge can still be adjusted slightly at a load equal to one third of the maximum load capacity
- Precision-machined wedge surfaces enable smooth, sensitive adjustments ( $< 1/10$  mm) using either a knurled-head screw or hexagonal screwdriver
- Double wedge effect, produces considerable lift and precise vertical movement without lateral displacement
- Height wedge tried and tested with heavy cast iron or forged parts on large machine tools

4157

## AMF Threaded pedestal

- **With rotatable ball**
- Steel hardened and tempered to a burnished shade
- Hardened ball
- Punctiform support, particularly suitable for supporting and aligning free-formed surfaces such as cast iron and forged workpieces
- Calibration accuracy approx. 0.1 mm

h - H mm	Load capacity kN	art.no.	€
56 - 70	30	<b>466050 0070</b>	<b>50,90</b>

4157

## AMF Attachments

- **For alignment and support elements**
- Steel hardened and tempered to a burnished shade

## AMF Boxed clamping tool set

- Designed for machine tools with T-slot tables
- All the necessary elements for quickly clamping tools, fixtures or workpieces
- All parts are replaceable and extensible
- Tempering steel in accordance with DIN or company standards
- Screw parts strength class 8 or 10
- Wooden box with removable hinged lid

### M10 x 10 set with deep clamping jaws, slot width 10 mm

Description	art.no.	€
4 universal clamping supports Model 1		
4 universal clamping supports Model 2		
2 universal clamping supports Model 3		
4 clamps with stepped teeth 11 x 80		
2 DIN 787 T-slot screws M10 x 40

## Screw paste

- Mineral grease-based
- Synergistic combination of highly effective white solid lubricants
- Heat-resistant and non-washable  
(Water resistance tested in accordance with DIN 51807, P.2; grease loss after 1 hr. at 37.8 °C = 1.4%)
- Particularly when aggressive cooling lubricants are used

Contents	Usable temperature range °C	art.no.	€

Performance demands quality

## Variable toggle clamps

- **Automatic span adjustment**

Variable clamping width horizontal clamp 0 to 65 mm,

Push-rod clamp 0 to 25 mm

Almost unchanged clamp force

- **Set screw in joint**

Clamping force adjustment up to 25 kN

- **Large ergonomic handle**

2 component plastic handle with soft inlay and large handgrip

## AMF Vertical clamp

- Quick-action clamp with toggle mechanism
- Wide and quick clamp opening, complete workpiece exposure
- High final transmission with low force application, large clamping forces
- Selflocking mechanism prevents the clamp from opening due to machining forces
- **Use:** Drilling, welding, bending, grinding, testing and assembling
- Galvanised and passivated, case-hardened with greased bearing bushes
- Rivet made of stainless steel
- Complete with hardened, tempered and galvanised clamping screw
- Stainless steel version available on request

4157

## AMF Horizontal clamp

- Quick-action clamp with toggle mechanism
- Wide and quick clamp opening, complete workpiece exposure
- High final transmission with low force application, large clamping forces
- Self-locking mechanism prevents the clamp from opening due to machining forces
- **Use:** Drilling, welding, bending, grinding, testing and assembling
- Galvanised and passivated, case-hardened with greased bearing bushes
- Rivet made of stainless steel
- Complete with hardened, tempered and galvanised clamping screw
- Stainless steel version available on request

4191

## Permanent magnetic clamping block

- **Not switchable**
- Clamping blocks A to C consist of a permanent magnet system with a narrow pole pitch that is effective on 2 to 3 surfaces (polishing: 4 mm)
- For clamping extremely thin steel workpieces = version D with a fine pole pitch of 1.3 mm
- Unlimited magnet life under normal industrial production conditions
- Clamping blocks can be ground and honed to half their height without significantly impairing the holding power

## ATORN® NEODIMIO permanent magnetic clamping plates

- For precise grinding and erosion work
- Particularly narrow transverse pole pitch
- Universal clamping of small, thin and large workpieces
- Nominal adhesive force 80 N/cm<sup>2</sup>
- A special switching system prevents deformation during the switching process
- Protection type IP65
- Possible wear-down of the pole plate 8 mm
- Supplied with 2 stopper bars, 2 clamping claws and hexagon key
- Further sizes available on request

**SAV** just experts Permanent lifting magnet

- Two-pole design
- Neodymium high-energy magnets for enormous lifting capacity
- High load-bearing capacity even with an air gap
- Suitable for round and flat materials
- Smooth on/off switch **with safety lock**
- Extremely compact, lightweight
- Robust and low maintenance
- For lifting panels, profiles, plates, round material and bar stock, e.g. for loading and unloading machines
- Supplied with individual test certificate

Model	L mm	Width mm	Height mm	Lifting capacity kg	Weight kg	art.no.	€

**TECNOMAGNETE** Permanent lifting magnet MaxX

- Extremely compact lifting magnets
- Lightweight and powerful
- Can lift 20 to 50 times its own weight
- The „neutral crown“ prevents magnetic flux dispersion, guaranteeing optimum performance even with a large air gap
- Switchable via hand lever, **with safety lock**
- Loads are handled carefully and not damaged

Model	L mm	Width mm	Height mm	Lifting capacity kg	Weight kg	art.no.	€

## UniPower electrical permanent magnet clamping plate

All the advantages of QX technology are now also available in the new HE "High Efficiency" design - with a more efficient pole design to focus the maximum magnetic flow towards the workpiece, regardless of position.

- Reduced height and weight of the magnetic clamping plate
- Full clamping force from 17 mm tool thickness
- Reliable quick coupling
- Maximum flexibility of use
- Optimised contact face
- Absolute reliability
- **Supplied with control unit**

### Model QX...UP

- Force/pole without air gap 615 daN
- Up to 16 kg/cm<sup>2</sup> in active magnetic field
- Over 75 t/m<sup>2</sup> across contact area
- Minimum workpiece thickness for maximum magnetic short circuit: 17 mm

## HADEF Lever hoists

- **Highly versatile; for lifting, pulling and clamping**
- Minimal net weight
- Free-wheeling mechanism for quickly feeding out the chain when unloaded
- Self-acting, fully enclosed load brake
- High-quality precision gearing
- 1.5 m lifting height, can be extended by the metre on request

# Calipers

INFO

## Analog Vernier calipers

## Absolute Digimatic caliper

## Reading off the scale

### Vernier caliper

#### Graduation 0.05 mm

(1) Reading off main scale	4 mm
(2) Reading off Vernier scale	0.75 mm
Reading	4.75 mm

Note: Above left, 0.75 mm (2) is read at the position at which a graduation stripe of the main scale is aligned with a graduation of the Vernier scale.

## Reading off the scale

### Dial caliper

#### Graduation 0.01 mm

(1) Reading off main scale	16 mm
(2) Reading off Vernier scale	0.13 mm
Reading	16.13 mm

## Application examples

## Types of Vernier scales

The Vernier scale is attached to the caliper's slider, and each graduation of the scale is 0.05 mm smaller than one main scale division of 1 mm. This means that as the caliper jaws are adjusted by 0.05 mm the subsequent Vernier scale line aligns with a main scale line and so indicates the number of 0.05 mm units to be counted (although for the sake of simplicity the scale is numbered in fractions of a mm).

Alternatively, one can choose a Vernier graduation 0.05 mm shorter than two graduations of the main scale, to obtain a long Vernier scale. The scale is thus easier to read, while the principle of measurement, and the graduation, remain unchanged.

### Standard Vernier scale

Graduation 0.05 mm

### Long Vernier scale

Graduation 0.05 mm

# Test equipment monitoring service

## ISO 9000 ff

- DAKS calibration laboratory according to DIN EN ISO/IEC 17025:2005
- Advice on setting up monitoring and management processes for your test equipment
- Short-term calibration of both new test equipment and test equipment which is already in use
- Modular software for monitoring and managing test equipment with target data generation
- Full service: management and calibration of your entire fleet of test equipment with data transfer
- Calibrated test equipment available from stock in the short term
- As calibrations are considered to be services, the calibration prices are to be understood as strictly net and are to be added to the tool's respective net sales price.

## ATORN® Digital sliding calliper

NEW

- **KEEPTRONIC** electronics store the 0-point, operating keys lock to prevent accidental alteration of the 0-point, battery life approx. 3 years
- Digit height 10mm
- Data output **multiCOM** can be used as USB, Digi-matic or RS232C
- **Functions:** ON/OFF, user-defined zeroing (RESET), mm/inch, PRESET user-defined values (for version with data output)
- Supplied with battery CR 2032, No. 548079 6032
- **Special accessories:** Data cable Types P-RS 232 / P-Digi-matic / P-USB, No. 512521....

## Protection classes as per DIN EN 60529

INFO

Identifier 1:

Protection against foreign objects and dust	Foreign objects > 50.0 mm Foreign objects > 12.0 mm Foreign objects > 2.5 mm foreign objects > 1.0 mm Protection against dust Dust-tight	IP 1. IP 2. IP 3. IP 4. IP 5. IP 6.
---	---	--

+

Identifier 2:

Protection against water	Vertically dripping water Water dripping at an angle Spray water Splash water Water jets High-intensity water jets Brief submersion Sustained submersion (depth in m)	IP .1 IP .2 IP .3 IP .4 IP .5 IP .6 IP .7 IP .8
--------------------------	--	--

Example: **IP67**

- Dust-tight = IP 6.
- Brief submersion = IP 7.
- Protection class DIN 40050: = IP 67

## Mitutoyo Digital sliding calliper ABSOLUTE! AOS!

ABSOLUTE®

- Particularly suitable for use in rough work conditions due to the electromagnetic inductive **AOS** measuring process (**A**dvanced **O**n-site **S**ensor), which is not sensitive to dirt or moisture on the scale
- **“ABSOLUTE” scale** for one-time zeroing
- **Digit height 9 mm (11 mm for MB 300 mm)**
- Battery life approx. 18,000 hours
- **Functions:** ON/OFF, zero point at battery change (ORIGIN), user-defined zeroing (ZERO/ABS), battery check
- Supplied with SR44 battery (No. 500534 0001) and factory certificate
- **Special accessories:** Digimatic cable Type C, No. 563100 0021 (1 m), No. 563100 0022 (2 m), USB cable Type C-USB, No. 563110 0003

ABSOLUTE®

**Absolutely certain, absolutely ingenious:**  
the Absolute System

All Mitutoyo measuring instruments with this logo have the ingenious „Absolute System“. Their integrated absolute scale requires the zero position to be set only once, and this zero point will be used from then on for all future measurements. This ensures maximum measurement precision even at maximum traversing speeds.

Power OFF

## SARA® Universal accessory set for digital sliding callipers

0,01 mm

- Accessory set suitable for all digital pocket callipers with a measuring jaw thickness of max. 4.5 mm
- Supplied with:
  - 1 pair of measuring holders in each size, short and long
  - 1 pair of disc probes in each size, Ø 12.5 / 10 / 6 mm
  - 1 pair of 60° tapered probes in each size, Ø 12 / 9 mm
  - 1 pair of cylindrical probes in each size, Ø 1.5 x 9 mm
  - 1 spring system for constant measuring force
  - 1 hex key

Designation	art.no.	€
Universal accessory set for Vernier callipers up to jaw thickness 3.5 mm	500190 0008	195,50
Universal accessory set for Vernier callipers up to jaw thickness 4.5 mm	500190 0009	219,-

- Supplied with additional depth gauge bridge and digital sliding calliper, measurement range 150 mm, for technical data please see No. 500702 0150

Designation	art.no.	€	DAkkS calibration art.no.	€
Universal accessory set with digital vernier calliper	500190 0010	250,-	072008 D001	14,-

## Groove measuring attachments

- For measuring external and internal groove diameters, O-ring recesses and undercuts
- Attachments are fixed to the sliding calliper measuring jaws in pairs using clamping screws
- Hard chrome-plated
- Suitable for all sliding callipers with max. measuring jaw thickness of 3.5 mm
- Set of 5 pairs of attachments
  - 1 pair for external recesses
  - 4 pairs for internal recesses of various diameters
- Supplied without sliding calliper

## Mitutoyo Lightweight digital workshop calliper

- Lightweight carbon design, up to 50% lighter than conventional workshop callipers
- Inductive measuring system housed in the measuring bar for added protection
- Easy to read thanks to 10 mm high digits
- **ABSOLUTE scale**
- Drive slide for constant measuring force
- Adjustable fixed measuring jaw
- Battery life approx. 5,000 hours
- **Functions:**  
OFFSET for switching between internal and external measurements  
PRESET/ORIGIN for pre-setting/zero point  
ZERO/ABS/HOLD
- Supplied with SR44 battery, no. 500534 0001
- **Optional accessories:** Digi-matic cable type A, no. 563100 0001 (1 m), no. 563100 0002 (2 m); USB cable type A-USB, no. 563110 0001
- Version with long measuring jaws (200 mm) available on request

## Mitutoyo ABSOLUTE! digital sliding depth gauge AOS!

- Particularly suitable for use in rough work conditions due to the electromagnetic inductive **AOS** measuring process (**A**dvanced **O**n-site **S**ensor), which is not sensitive to dirt or moisture on the scale
- **ABSOLUTE** scale for one-time zeroing
- **High-contrast LCD with 9 mm high digits**
- Battery life approx. 18,000 hours
- **Functions:** ON/OFF, zero point at battery change (ORIGIN), user-defined zeroing (ZERO/ABS), battery check
- Supplied with SR44 battery, No. 500534 0001
- **Special accessories:** Digimatic cable type C No. 563100 0021 (1 m), No. 563100 0022 (2 m), USB cable type C USB No. 563110 0003

## Analog outside micrometer

## Digimatic outside micrometer

## Outside micrometers

INFO

### Reading off the scale

Outside micrometer with scale division 0.01 mm

- (1) Reading off the scale sleeve 7.00 mm
  - (2) Reading off the scale drum + 0.37 mm
- Total reading 7.37 mm

Note: 0.37 mm (2) is read on the position at which the reference line of the sleeve is aligned with the scale divisions of the drum.

The graduation of the drum can be read directly at intervals of 0.01 mm, as listed above. However, it can also be estimated at intervals of 0.001 mm, if the lines lie closely above each other, as the thickness of the lines is one-fifth of the distance between the said lines.

Outside micrometer with Vernier scale (scale division of 0.001 mm)

The Vernier scale lying above the reference line of the sleeve allows a direct reading in values to 0.001 mm.

- (1) Reading off the scale sleeve 6.000 mm
  - (2) Reading off the scale drum 0.210 mm
  - (3) Read off the markings of the Vernier scale and the graduation lines of the drum + 0.003 mm
- Total reading 6.213 mm

Note: 0.21 mm (2) is read off at the position at which the reference line lies between two graduation marks (21 and 22 in this case). The 0.003 mm reading (3) is taken at the position at which one of the Vernier graduation marks is in line with one of the drum graduations.

### Measuring force limitation

	Audible	Single-handed operation	Note!
Ratchet stop 	yes	unsuitable	audible clicking causes micro-vibrations
Friction thimble (F type) 	no	suitable	noiseless and vibration-free operation due to friction clutch
Ratchet barrel (T type) 	yes	suitable	the constant measuring force is achieved through the acoustic feedback of the ratchet function.
Ratchet barrel 	yes	suitable	The constant measuring force is achieved through the acoustic feedback of the ratchet function.

### The parallelism check of the measuring faces

The parallelism can be checked with a plane-parallel test glass held between the measuring faces. First, the test tube is attached to the measuring face of the anvil. The test tube is then clamped by closing the spindle with normal measuring force and the number of red interference rings or stripes that are visible under white light on the measuring face of the spindle are counted. Each interference ring/stripe is equivalent to a half-wavelength difference (0.32 μm for red stripes). In the above picture a parallelism of approximately 1 μm is achieved, from 0.32 μm x 3 = 0.96 μm.

### Flatness check of the measuring faces

The flatness can be estimated by holding an optical flat against the measuring face. A visible number of red interference rings or stripes can then be counted on the measuring face under white light. Each interference ring/stripe represents a half-wavelength difference in height (0.32 μm).

The measuring face is curved by about 1.3 μm. (0.32 μm x 4 paired red stripes.)

The measuring face is deeply concave (or convex) by about 0.6 μm. (0.32 μm x 2 continuous stripes)

**SARA® Outside micrometer**

- Precision design with ratchet
- Frame with hand protection
- Spindle fixed by means of a locking lever
- Reading parts matt chrome-plated
- Scale barrel Ø: 17 mm
- Spindle Ø: 6.35 mm
- Calibration includes setting gauge
- Supplied with adjustment key, versions over 25 mm include setting gauge

## Mitutoyo Outside micrometer

- Sturdy, with ratchet
- Steel frame with hand protection
- Spindle fixed by means of a locking lever
- Reading parts matt chrome-plated
- Spindle Ø: 6.35 mm
- Measuring force: 5 - 10 N
- Calibration includes setting gauges
- Supplied with adjustment key; versions with measurement range over 25 mm also include setting gauge; versions up to 50 mm include factory certificate

502903 0025

**With factory certificate for measurement ranges up to 50 mm!**

502903 0025

5102

### Individual, with ratchet barrel

- A new and exceptionally smooth-running ratchet mechanism provides a constant measuring force that enables quick and safe one-handed operation due to the ratchet design of both the measuring barrel and quick adjustment
- Scale barrel Ø 19 mm

## Mitutoyo Outside micrometer designed for workshop use

- Lightweight workshop version with ratchet
- Painted steel frame (with bores to reduce weight for larger measurement ranges)
- Spindle fixed by means of a locking lever
- Reading parts matt chrome-plated
- Scale barrel Ø up to 300 mm = 18 mm, above 300 mm = 21 mm
- Spindle Ø up to 300 mm = 6.35 mm, above 300 mm = 8 mm
- Calibration includes setting gauges
- Supplied with adjustment key, versions with measurement ranges over 25 mm include setting gauge and versions up to 50 mm include factory certificate

**With factory certificate  
for measurement ranges  
up to 50 mm!**

# Mitutoyo Digital outside micrometer IP65

- Precision design with ratchet
- Shock-proof design
- Robust frame made from special cast iron, painted, with hand protection
- Spindle fixed by means of a lever button
- Matt chrome-plated scale sleeve and scale barrel
- Readings via large LCD display with 7.5 mm high digits
- Automatic switch-off if left idle
- "Function Lock" for saving original values up to a measurement range of 100 mm
- Scale barrel Ø 18 mm
- Spindle Ø 6.35 mm
- Calibration includes setting gauge
- Accuracy exceeds DIN 863 requirements
- **Functions:** Initial value (ORIGIN), zeroing/absolute (ZERO/ABS), hold value (HOLD), automatic switch-off, battery check
- Supplied with adjustment key and SR44 battery, no. 500534 0001; versions with measurement ranges over 25 mm include setting gauge and versions up to 50 mm include factory certificate
- **Optional accessories:** Digimatic cable type B, no. 563100 0011 (1 m), no. 563100 0012 (2 m); USB cable type B-USB, no. 563110 0002

**With factory certificate for measurement ranges up to 50 mm!**

## Mitutoyo Digital outside micrometer QuantuMike

- The world's first outside micrometer with **2 mm spindle pitch**
- Particularly suitable for one-handed measurements and for use on a stand
- Barrel and quick adjustment with ratchet design
- LCD display with 7.5 mm high digits
- "Function Lock" for saving original values
- Switches off automatically after 20 minutes of inactivity
- Accuracy exceeds DIN 863 requirements
- Calibration includes setting gauge
- **Functions:** Initial value (ORIGIN), hold value and data transfer (HOLD/DATA), ON/OFF
- Supplied with SR44 battery (no. 500534 0001) and adjustment key; versions over 25 mm with setting gauge and factory certificate for measurement ranges up to 50 mm
- **Optional accessories:** Digimatic cable type B, no. 563100 0011 (1 m), no. 563100 0012 (2 m), USB cable type B-USB, no. 563110 0002

## Mitutoyo Digital high-precision outside micrometer

- High-precision outside micrometer for testing workpieces with particularly tight tolerances, e.g. ground parts
- Reinforced structure with particularly stable clamp
- Special heat-insulated recessed handles to prevent thermal expansion resulting from hand warmth
- Measuring barrel with ratchet design, measuring force 7-9 N
- **ABSOLUTE rotary encoder**
- Digimatic2 version
- Measuring areas Ø 3.2 mm
- Weight 400 g
- Supplied with additional heat-insulated recessed handle, screwdriver, adjustment key and battery CR2032 No. 548079 6032
- **Special accessories:** Digimatic cable Type B No. 563100 0011 (1 m), No. 563100 0012 (2 m), USB cable Type B-USB No. 563110 0002

ABSOLUTE®

- For rapid, highly accurate measurement of different diameters and precise measurements on sensitive surfaces
- Steel frame, with ratchet barrel
- Spindle feed 10 mm/rev, non-rotating spindle
- LCD display with 10 mm high digits
- Unrestricted traverse speed
- Battery life 5 years
- Scale barrel Ø: 25 mm, spindle Ø: 6.35 mm
- Calibration including setting gauge
- **Function:** Initial value (ORIGIN), ZERO/ABS, hold value (HOLD), ON/OFF, battery check
- Supplied with SR44 battery, No. 500534 0001; versions over 25 mm include setting gauge
- **Special accessories:** Digi-matic cable Type B No. 563100 0011 (1 m), No. 563100 0012 (2 m), USB cable Type B-USB No. 563110 0002

**30 mm measurement range with 3 rotations!**

## Mitutoyo Outside micrometer with replaceable anvil

- **Form D16**
- The replaceable measuring anvils permit a variable measurement range. Adjustments are performed using the setting gauge provided.
- Painted steel frame with bores to reduce weight
- Spindle fixed by means of a locking lever
- Reading parts matt chrome-plated
- Scale barrel Ø: up to 300 mm = 18 mm, above 300 mm = 21 mm
- Spindle Ø up to 300 mm = 6.35 mm, above 300 mm = 8 mm
- Error margin: up to 500 mm = DIN, from 500 mm = ± (4 + L/75) µm
- Measuring faces: Carbide-tipped spindle
- Inserts: special steel, hardened
- Calibration including setting gauges
- Supplied with adjustment key, replaceable inserts and setting gauges

## Mitutoyo Indicating calliper micrometer

- **Type D13**
- For series testing
- Large easy-to-read scale
- Measuring faces carbide-tipped, ground and finely lapped
- Screw for carrying out zeroing adjustments
- Adjustable tolerance marks for go and no-go measurements
- Conveniently located return motion lever on the right or left side
- Matt chrome-plated scale barrel and scale sleeve, Ø 21 mm
- Measuring spindle Ø 8 mm
- Display range ± 0.06 mm
- Error margin for micrometer: 0.002 mm
- Error margin for display: 0.001 mm
- Planarity 0.3 µm
- Measuring force 5 - 10 N
- Calibration includes setting gauge
- Supplied with adjustment key, versions over 25 mm include setting gauge

## Mitutoyo Special-purpose outside micrometers for testing external threads

- **Type D18**, with locating bores for optional thread inserts
- For measuring pitch diameters on external threads
- Painted steel frame with hand protection, spindle fixed by means of a locking lever
- Scale barrel Ø: 18 mm
- Spindle Ø: 6.35 mm
- Calibration includes setting gauge
- Measuring inserts not included

### Analogue

- Reading parts matt chrome-plated
- 0.01 mm readings
- Supplied with adjustment key, versions over 25 mm include 60° setting gauge

## Mitutoyo Adjustable gap gauge

- Quick and reliable measurement of outside diameters up to 300 mm
- Check gauge adjusted with the aid of a corresponding gauge block
- Sturdy cast iron frame with Ø 8 mm collet for attaching a dial indicator
- Finely lapped carbide measuring faces
- Frame with insulation protection
- Lower measuring surface can be adjusted by 25 mm and is fixed by a locking ring
- Adjustable depth stop
- Measuring force  $15 \pm 3$  N
- Measuring face parallelism: 0.005 mm
- Calibration plus testing costs for the indicating measuring instrument
- Supplied without dial indicator in moulded packaging

Application example with digital dial indicator and holder

## Mitutoyo Digital depth micrometer

- With ratchet
- Bridge made of tool steel, hardened and lapped
- Extremely easy to read thanks to 6.6 mm high LCD digits
- **With replaceable measuring inserts**
- Spindle travel 25 mm, spindle Ø 4 mm
- Scale barrel Ø 18 mm
- **Functions:** Pre-set (PRESET), zeroing/absolute (ZERO/ABS), hold value (HOLD), automatic switch-off and battery check
- Dimension A = measurement range
- Calibration includes inserts
- Supplied with adjustment key, battery SR 44 No. 500534 0001 and replaceable measuring inserts
- **Special accessories:** Digimatic cable Type B No. 563100 0011 (1 m), No. 563100 0012 (2 m), USB cable Type B-USB No. 563110 0002

## Mitutoyo Depth gauge with dial indicator readings

- **With replaceable extensions**
- Bridge made from hardened and lapped tool steel
- Anticlockwise dial indicator
- Measurement depth adjusted by changing the dial indicator extensions
- Diameter of extension: 5 mm
- Dial indicator accuracy: fe = 12 µm
- Calibration includes measuring bridge
- Supplied with extensions

## Mitutoyo Digital built-in micrometer

- Specially for use with coordinate measuring tables on measuring microscopes and measuring projectors
- Display component can be rotated through 330°
- Extremely easy to read with 7.5 mm high digits
- Automatic switch-off after 20 minutes
- Display and control buttons made from oil-resistant materials
- Straight clamping shank,  $\varnothing$  18 mm
- $\varnothing$  49 mm adjustment barrel with crank for quick adjustment
- Spindle hardened and ground
- **Functions:** ON/ZERO/ABS, reverse counting direction, PRESET
- Supplied in moulded packaging with two SR44 batteries, no. 500534 0001
- **Optional accessories:** Digimatic cable type C, no. 563100 0021 (1 m), no. 563100 0022 (2 m), USB cable type C-USB, no. 563110 0003

## Inside micrometer with measuring jaws

- Workshop version with matt chrome-plating
- With ratchet
- Carbide-tipped measuring faces, precision machined
- Spindle fixed via a clamping screw
- Reading parts matt chrome-plated
- Scale barrel Ø: 17 mm
- Calibration includes ring gauges, reduced testing
- Supplied with adjustment key and ring gauge for measurement ranges 5 - 30 and 25 - 50 mm

## Mitutoyo Digital inside micrometer with jaws

- Precision design with ratchet
- Spindle fixed via a clamping screw
- Carbide-tipped measuring faces, precision machined
- Extremely easy to read via LCD display with 6.6 mm high digits
- Activates automatically when spindle moves
- Scale barrel Ø: 18 mm
- **Functions:** Pre-set (PRESET), zeroing/absolute (ZERO/ABS), hold value (HOLD)  
Automatic switch-off, battery check
- Supplied with adjustment key and SR44 battery, no. 500534 0001
- **Optional accessories:** Digimatic cable type B, no. 563100 0011 (1 m), no. 563100 0012 (2 m); USB cable type B-USB, no. 563110 0002

## Mitutoyo Inside micrometer, fixed version

- Lightweight design featuring tubular construction
- Reading parts matt chrome-plated
- Rounded measuring faces carbide-tipped and lapped
- For measurement ranges from 75 mm, spindle is fixed by means of a clamping screw
- Measurement ranges above 100 mm include hand protection
- Scale barrel Ø: up to 100 mm = 15 mm, above 100 mm = 18 mm
- Supplied with adjustment key

## Mitutoyo Inside micrometer set

- Modular design
- Screwing on the graduated extensions makes it possible to measure all dimensions within the specified ranges
- Calibration includes extensions
- Supplied with adjustment key

### Hardened measuring faces

- Extensions with ground internal rod serving as the material measure
- Micrometer measurement range 13 mm
- Micrometer fixed by means of clamping screws
- Reading parts chrome-plated
- Scale barrel Ø: 15 mm
- Tubular Ø of extensions: 12.5 mm
- Error margin:  $(3+V+L/50) \mu\text{m}$ , L in mm, V = number of extensions

## Inside micrometers

### Reading off the scale

Scale division 0.005 mm

(1) external sleeve	35.000 mm
(2) barrel	0.015 mm
Reading	35.015 mm

### Alignment error

Fig. 1  
 $\ell$ : The inner diameter to be measured  
 $L$ : Length measured with axial offset X  
 $X$ : Offset in axial direction  
 $\Delta \ell$ : Error in measurement  
 $\Delta \ell: L \cdot e = \sqrt{L^2 + X^2} - L$

Fig. 2  
 $\ell$ : The inner diameter to be measured  
 $L$ : Length measured with radial offset X  
 $X$ : Offset in radial direction  
 $\Delta \ell$ : Error in measurement  
 $\Delta \ell: L \cdot e = \sqrt{L^2 + X^2} - L$

### Changing the measured values through a different measuring position

When using the Holtest Series, the measurement values when measuring with fully adjacent measuring faces and when measuring just with the points of the measuring face vary, due to the mechanical properties of the micrometer. Before measuring, set the reference value under the same conditions.

If only the points of the measuring faces are used for the measurement, then adjust the reference value correspondingly. The set-up must be as careful as the measurement!

When carrying out a measurement with the inside micrometer in an axial or radial direction, attention must be paid to the correct orientation of the inside micrometer. Misalignment during the measurement leads to the offset X (Figure 1 and Figure 2), and thus to an incorrect measurement. An axial offset X suggests a larger and a radial offset X a smaller than expected measurement.

### Airy points and Bessel points

When a normal or an inside micrometer is positioned horizontally, supported at two points, it undergoes some bowing under load due to its own weight; the shape of this deformation depends on the distance between the support points. As the following figure shows, there are two distances between the supporting positions, which control this deformation in useful ways.

The ends of a standard (or inside) micrometer can be positioned precisely horizontally by spacing the two support positions symmetrically (see above figure). These points are referred to as 'Airy points' and are often used to ensure that the ends of a length-measuring instrument are parallel to each other, allowing the length to be determined accurately. The change in length of a standard (or inside) micrometer due to bowing under load can be reduced to a minimum by spacing the two positions of the supports symmetrically (see above figure). These points are called Bessel points and may be useful when using long inside micrometers.

### Measurement errors due to temperature fluctuations of the inside micrometer

The heat transfer from the operator to the inside micrometer should be minimised to avoid significant measurement errors due to the temperature difference between the workpiece and the bore gauge. If the bore gauge is held directly in the hand, gloves should be worn or it should be gripped via a heat insulator (if available).

### Inside measuring instruments

Mitutoyo internal measuring instruments for small holes have contact elements with a large curvature, allowing these to be easily positioned when measuring the diameter of the actual hole (in the direction a-a). The true diameter is the minimum value displayed on the dial indicator, while the internal measuring instrument is moved back and forth as shown by the arrow.

The spring-loaded centring bridge on a Mitutoyo two-point inside measuring device allows an automatic radial alignment, thus requiring only an axial rocking movement to find the minimum reading (true diameter).

## SARA® Inside micrometers with three-point contacts

- For measuring through-holes and blind holes
- Large measurement depths due to extension
- Reading and operating parts matt chrome-plated
- Measuring spindle fully hardened and ground
- Ratchet coupling for repeatable measuring force
- Self-centring measuring head with three laterally extending measuring probes
- Carbide-tipped from a measurement range of 12 mm
- Clearance a for 6 - 12 mm = 1.4 mm, 12 - 100 mm = 0.5 mm
- Scale division up to size 0012 = 0.001 mm, from size 0016 = 0.005 mm
- Calibration including ring gauges, reduced testing
- Supplied in a sturdy transport case including ring gauge and extension

## Mitutoyo HOLTEST inside micrometer with three-point contact

- With ratchet
- Reading parts matt chrome-plated
- Measuring faces offset 120°
- **Type A** 508102/508106: Measuring faces and taper made from hardened steel, contact point: Carbide
- **Type B** 508104/508108: Measuring faces: up to size 0012, titanium-coated carbide; from size 0016, titanium-coated measuring pins made from hardened steel. Contact point and taper: Carbide
- Scale barrel Ø: up to 12 mm measurement range = 17 mm, above 12 mm measurement range = 23 mm
- Readings: up to 12 mm measurement range = 0.001 mm, above 12 mm measuring range = 0.005 mm
- Supplied in a case with screwdriver and key for extension assembly
- **Accessories:** Ring gauges no. 540135..., extensions no. 508701....

### Note regarding Mitutoyo digital inside micrometers with three-point contacts

The hole diameter can be measured almost all the way to the base of the hole.

The following distances from the base of the hole cannot be measured:

Measuring range mm	Clearance a mm	
	508102....	508104....
6 - 12	-	2.0
12 - 20	2.6	0.3
20 - 100	3.4	0.3
100 - 300	19.6	12.4

## ATORN® Inside micrometer with three-point contact

- For measuring through-holes, blind bores (from  $\varnothing$  12 mm, dimension a = 0 mm) and short centring shoulders
- Self-centring design
- Carbide-tipped measuring faces from  $\varnothing$  12 mm
- Measuring heads from  $\varnothing$  40 mm with lightweight anodised aluminium construction
- Measuring spindle hardened and ground
- Matt chrome-plated reading parts with an anti-glare finish
- Quick drive with integrated coupling

From  $\varnothing$  12-16 mm measurements to borehole bottom possible

## Mitutoyo ATORN® Extensions

- For extending the measurement depth
- Assembled by screwing in between the measuring head and display component
- 508701.... suitable for inside micrometers with three-point contacts **HOLTEST** and **BOREMATIC**
- 507803.... suitable for **ATORN** inside micrometers with three-point contacts
- **Caution:** After fitting or removing the extension, the inside micrometer with three-point contact must be checked and re-adjusted if necessary.

## Mitutoyo Digital inside micrometers with three-point contacts HOLTEST

- With ratchet
- Readings via LCD display with 7.5 mm high digits
- Casing particularly resistant to oils and chemicals
- Activates automatically when spindle moves
- Measuring faces: up to size 0012, titanium-coated carbide; from size 0016, titanium-coated measuring pins made from hardened steel. Contact point and taper: Carbide
- **Functions:** Pre-set for two values (PRESET), zeroing/absolute (ZERO/ABS), hold value (HOLD), automatic switch-off, battery check
- Supplied in a case with SR44 battery (no. 500534 0001), key and factory certificate
- **Optional accessories:** Digimatic cable type B, no. 563100 0011 (1 m), no. 563100 0012 (2 m), USB cable type B-USB, no. 563110 0002; ring gauges, no. 540135...; extensions, no. 508701....

## Mitutoyo Inside micrometers with three-point contacts BOREMATIC

ABSOLUTE®

0,001 mm ABSOLUTE Digi-matic USB

- For fast and precise series measurements
- Base body with operating handle for quick adjustment
- Extremely easy to read with 11 mm high digits
- Display component can be rotated through 330°
- Allows two pre-set values to be input
- Measuring faces: up to size 0012, titanium-coated carbide; from size 0016, titanium-coated measuring pins made from hardened steel. Contact point and taper: Carbide
- Error margin: Measuring range 6 - 20 mm,  $\varnothing = 0.005$  mm; measuring range 20 - 125 mm  $\varnothing = 0.006$  mm
- **Functions:** MODE to switch between tolerance, factor and pre-set modes  
SET to confirm input  
DATA/ON/OFF  
Battery check
- Supplied with SR44 battery (no. 500534 0001), key and factory certificate
- **Optional accessories:** Digimatic cable type F, no. 563100 0051 (1 m), no. 563100 0052 (2 m); USB cable type F-USB, no. 563110 0006; ring gauge, no. 540135....; extensions, no. 508701....

Continued on next page >>>

The hole diameter can be measured almost all the way to the base of the hole.

The following distances from the base of the hole cannot be measured:

Measuring range mm	Clearance a mm
6 - 12	2.0
12 - 125	0.3

**Replaceable measuring heads for BOREMATIC**

- For extending the measurement range of standard measuring instruments
- Can only be used in combination with a suitable adapter (508506....)

**Mitutoyo Internal precision instrument**

Werknorm

- Comparative measurement with reference to a pre-set reference dimension
- Set by means of outside micrometers, ring gauges or adjustable reference gauges with gauge blocks.
- With analogue dial indicator, can be replaced with a digital dial indicator (optional accessory)
- With movable stylus, carbide-tipped, measuring span 1.6 mm
- Replaceable carbide-tipped measuring bolts, sizes 0010 and 0018 hardened
- **Size 0150** with additional 50 mm extension for Ø range 100 - 150 mm
- Accuracy without an indicating measuring instrument
- Calibration includes dial indicator
- Supplied with base unit, set of measuring inserts with shims, analogue dial indicator with plastic protector

## Bore gauge OD

- Robust and easy-to-use two-point comparative measuring instrument
- For series inspections of  $\varnothing$  3.1 to 110mm bores
- High-precision measuring sleeve ensures optimum centring inside the bore
- Repeat precision 1 $\mu$ m
- Measuring span 0.2mm ( $\varnothing$  3.1 to 6.0 = 0.15mm)
- Measuring force 1 - 2N
- Carbide measuring probes, other materials available on request
- Suitable for measuring with indicating callipers, dial indicators or electric probes
- Connecting thread holder/gauge M11 x 0.75
- \* = nominal dimension range up to  $\varnothing$  4mm H = 26mm, from  $\varnothing$  4.01 up to 6mm H = 10mm
- **The following is required for a complete bore gauge OD: Bore gauge (526557.../526558...) + holder (526559...) + indicating measuring instrument + suitable ring gauge**
- Greater diameter, indicating measuring instrument and suitable ring gauges available on request
- Supplied without indicating measuring instrument and ring gauges

### Standard bore gauge OD

- **Caution:** Please specify the nominal dimension and tolerance of the bore when placing your order!  
Examples: No. 526557 0006 / 4 +0.02 / -0.01  
No. 526557 0020 / 18H7

## OD bore gauges, special design and accessories

### You require

- Bore gauges for through-holes
- Bore gauges in special forms
- Measuring probe jewelled or hard-chrome plated for surfaces sensitive to scratching
- Depth stoppers
- Angle pieces
- Measurement depth extensions

Solutions not provided in our catalogue are also available on request. Please contact us, our technicians will be glad to advise you.

## Mitutoyo Internal precision instrument

- For tasks such as measuring extremely small bores (from Ø 0.95 mm)
- Comparative measurement with reference to a pre-set reference dimension
- With dial indicator and expansion measuring heads
- Measuring heads from Ø 0.95 to 7.0 mm with a hard chrome-plated finish, and Ø 7.0 to 18 mm made from hardened gauge steel similar to measuring needles
- Dial indicator can be replaced with a digital dial indicator including a data output (optional accessory)
- \* = Measurement depth: Measurement range 1.5 - 2.25 mm = 17.5 mm, measurement range 2.25 - 4.00 mm = 22.5 mm
- Calibration includes dial indicator
- Supplied in a case with base unit, set of measuring heads, measuring needle, analogue dial indicator including plastic protector, and assembly key

## ATORN® Universal measuring instrument UNICHECK

INFO

The comparative measuring instrument UNICHECK, for external and internal measurements, is a versatile precision measuring instrument for efficient use in production and measuring rooms.

The wide range of measuring probes and measuring inserts gives the UNICHECK

enormous versatility in the most diverse measurement tasks. The UNICHECK is used to both test workpieces and adjust machines.

Internal and external dimensions on shafts and parallel surfaces, recesses, grooves, dovetail guides and toothing are all tested. Internal and external threads can also be measured.

The measuring direction required for external or internal measuring can be quickly and easily adjusted at a touch.

Dial indicator, precision dial or electronic displacement transducer with a clamping shank  $\varnothing 8$  h6 can be used to display measured values, where necessary and required.

**Flexible  
Exact  
Universal**

### Device setup

1. Basic unit
2. Display unit (dial indicator, precision dial or electronic displacement transducer)
3. Measuring probe mount, locating bore  $\varnothing 5$  mm
4. Measuring probe shank  $\varnothing 5$  mm
5. Protective cap
6. Heat protection handle
7. Control lever
8. Slider with mount for fixed probe
9. Measuring arm for horizontal measurements, locating bore  $\varnothing 5$  mm
10. Adapter  $\varnothing 5$  mm, with connecting thread M2.5
11. Special-purpose contact point M2.5
12. Adapter  $\varnothing 5$  mm, with locating bore  $\varnothing 3.5$  mm
13. Thread measuring insert, shank  $\varnothing 3.5$  mm

### Measuring setup for large measurement ranges

The exact measurement of a round workpiece with  $\varnothing 1500$  mm is no problem at all for the UNICHECK.

The basic unit can be extended to the required measuring span using the corresponding extensions.

The zero setting can be performed using a gauge block combination and a gauge block holder.

# ATORN® Universal measuring instrument UNICHECK

- For carrying out a wide range of measuring tasks such as external and internal measurements, external and internal threads, external and internal tothing
- Adjustments are performed using an adjustment device, master, gauge block combination, ring gauge or outside micrometer
- Rugged tubular design
- Adjustable fixed measuring jaw
- Movable arm for internal and external measurements, reversible measuring direction, measuring range 15 mm
- Universal application by attaching a wide variety of measuring arms and probe tips (optional accessories)
- Measurement range extendable to 2000 mm using extensions (optional accessories)
- Choice of display via analogue or digital dial indicator (optional accessories)
- Supplied in a wooden case (without probe holding fixtures, probes or dial indicator)

Application example: with dial indicator, measuring probe holding fixture, ball tip measuring probe Ø 6 mm

Assembly

Stem Assembly	Method	<p>Clamp the stem with a clamping screw</p>	<p>Clamping the stem by split-clamp fastening</p>
	Note	<ul style="list-style-type: none"> <li>Mounting hole tolerance: <math>\varnothing 8G7 (+0.005 \text{ to } 0.02)</math></li> <li>Clamping screw M4 to M6</li> <li>Clamping position: 8 mm or more from the lower side of the stem</li> <li>Maximum torque: 150N-cm when clamping with a single M5 screw</li> <li>Note that excessive clamping torque may adversely affect the spindle movement.</li> </ul>	<ul style="list-style-type: none"> <li>Mounting hole tolerance: <math>\varnothing 8G7 (+0.005 \text{ to } 0.02)</math></li> </ul>
Fixing with a mounting lug	Method	<p>M6 screw Flat washer</p>	
	Note	<ul style="list-style-type: none"> <li>Depending on the application, the mounting lugs can be changed in orientation by 90 degrees. (Setting of lug on delivery: horizontal)</li> <li>The mounting lugs of the models of series 1 (No. 1911, 1913-10&amp;1003) cannot, however, be adjusted horizontally.</li> <li>To prevent cosine-effect error, ensure that the measuring spindle is positioned at right angles to the surface to be measured (with the spindle itself in line with the measuring direction).</li> </ul>	

Contact element

- Standardised screw thread M 2.5 x 0.45 (length: 5 mm).
- When producing a contact point, the incomplete thread section at the root of the screw must be less than 0.7 mm.

## Dial indicators

INFO

Measuring stage

Contact point down  
(normal position)

Measuring stage

Plunger horizontal  
(measuring direction lateral)

Measuring stage

Contact point up (contrary to  
standard-measurement direction)

## Effect of alignment on the measuring force

- In measurements with a horizontal or upwards measuring direction, the measuring force is low compared to the standard measuring direction (downwards). In these cases, the repeatability must be verified.

## Setting the zero point on a digital dial indicator

The range of 0.2 mm at the end of the spindle stroke is not specified. Make sure that the spindle is raised by at least 0.2 mm when setting the zero point.

## Caring for the spindle

- The spindle must not be lubricated. Otherwise dust may stick to it and cause errors.
- If the spindle is stiff, wipe it with a dry cloth or a cloth soaked in alcohol. If this leads to no improvement, consult Mitutoyo for repairs.
- Before you perform a measurement or calibration, ensure that the spindle can easily move up and down, and check the zero point for stability.

## Mitutoyo Dial indicators

### • 0.01 mm or 0.001 mm readings

- Casing made from oil-resistant plastic
- Completely free of through-holes for improved dirt protection
- Back cover: flat or with mounting lug
- Rotatable outer ring for zeroing, fixed by means of a clamping screw
- Two adjustable tolerance marks
- Surface-hardened watch glass
- Damped end point
- Robust spindle, Ø 4.8 mm
- New clamping shank easily secures the entire length
- Contact point thread M2.5
- Clamping shank Ø 8 mm
- Supplied in moulded packaging

### Compact dial indicator, 0.01 mm, outer ring Ø 40 mm

## ATORN® Digital dial indicator for run-out measurements

- Inductive measuring system
- Aluminium casing with plastic front plate, Ø 60 mm, coolant-proof
- Easily readable LCD display with 11 mm high digits
- Front plate can be rotated through 270°
- Energy save mode and automatic reactivation
- Coloured LEDs for tolerance evaluation
- Max. / min. / max-min for run-out measurements
- 0.001 mm version, can be switched to 0.01 mm
- PROXIMITY data output
- Clamping shank Ø 8 mm
- Contact point thread M2.5
- **Functions:**
  - mm/inch toggle option
  - Preset (user-defined values)
  - Reverse counting direction
  - Switch between ref. 1 and ref. 2 (ABS/INC)
  - Hold
- Supplied with CR2032 battery, no. 548079 6032
- **Optional accessories:** Data cable: PROXIMITY-USB, no. 500700 9966 or PROXIMITY-RS, no. 500700 9965

## Mitutoyo Digital ABSOLUTE dial indicator IDF

- Power supply via mains adapter
- **ABSOLUTE scale**
- Backlit LCD display
- Combined digital and analogue display, which switches colour from green to red if the pre-set tolerance limits are exceeded
- Clamping shank  $\varnothing$  8 mm
- Unrestricted travel speed
- Max., min. or difference values (TIR) can be selected for run-out measurements
- **Functions:** (ON/OFF) for power on/off; (MODE) for switching between: normal measurement, tolerance input, max. hold value, min. hold value, run-out measurement (max-min difference); (RANGE/Adj) for switching the analogue display range, centring the zero point of the analogue display pointer; (PRESET/SET) for determining the absolute starting point, pre-setting user-defined values, inputting tolerance values, confirming mode selection; (ZERO/ABS) for user-defined zeroing, switching between absolute/comparative measurement systems; (RES) for switching between 0.001 mm and 0.01 mm; (+/-) sign selection, function lock
- Supplied in moulded packaging, with mains adapter and lifting lever
- **Optional accessories:** Digimatic cable type D, no. 563100 0031 (1 m), no. 563100 0032 (2 m), USB cable type D-USB, no. 563110 0004

## Mitutoyo Digital dial indicator IDH

- **Can be remote controlled**
- **Power supply via mains adapter**
- Photoelectric backlit glass scale
- Max. travel speed 1,000 mm/sec.
- Backlit LCD display
- Combined digital and analogue display
- Max., min. or difference values (TIR) can be selected for run-out measurements
- Optional remote control available
- Combined Digimatic / RS-232 C interface data output, can be used in both directions
- Clamping shank  $\varnothing$  8 mm
- **Functions:** ON/OFF, MODE for switching from normal mode to tolerance evaluation, resolution for digital and analogue display, setup menu, MAX, MIN and TIR, toggle between 0.001 mm and 0.01 mm, (+/-) sign selection, SET/ZERO for confirming inputs and the display zero point, DATA/fn for data transfer and keypad lock
- Supplied in moulded packaging with mains adapter and factory certificate
- **Optional accessories:** Digimatic cable type D, no. 563100 0031 (1 m), no. 563100 0032 (2 m), USB cable type D-USB, no. 563110 0004

## Mitutoyo Digital ABSOLUTE dial indicators IDN / IDB

ABSOLUTE®

Sicherheit  
Staub- und  
wasserge-  
schützt

www.tuv.com  
ID 000007162

• Small and slim digital dial indicators for installation in fixtures with limited space

**ABSOLUTE scale**

- Battery life approx. 7,000 hours
- Unrestricted travel speed
- Easy to read thanks to large display
- Type B readings from above, Type N readings from the front

**IP66 protection rating**, oil-resistant casing

• Small casing dimensions, w = 35 mm / h = 60 mm

**Display can be flipped 180° depending on installation position**

• Dial indicators with 0.001 mm resolution, can be switched to 0.01 mm

• Can be controlled remotely via special cable (optional accessory)

• **Functions:** On/off/DATA for transmitting measurement values, SET for confirming inputs, MODE for selecting tolerances, zeroing, counting direction, display switching

• Supplied in moulded packaging with SR44 battery, no. 500534 0001

• **Optional accessories:** Digimatic cable type G, no. 563100 0061 (1 m), no. 563100 0062 (2 m); USB cable type G-USB, no. 563110 0007

Display can be rotated through 180°

Type B

## Mitutoyo IDC digital ABSOLUTE dial indicator with calculation function

**ABSOLUTE scale**

- Suitable for use with chamfer gauges or measuring bridges for determining diameters
- Freely programmable calculation formula  $Ax + B + Cx - I$
- Combined digital/analogue display
- Resolution can be selected in 12 steps, 0.0002 mm to 1 mm
- Display part can be rotated through 330° for better reading
- 3 memory slots for pre-set and tolerance values
- Configurable via PC (special interface optional)
- Clamping shank  $\varnothing$  8 mm
- Probe tip thread M2.5

• **Functions:** Zeroing (ORIGIN), input tolerance values (TOL), input user-defined values (PRESET), confirm set formula, data transfer (DATA), hold value (HOLD), input calculation function (MODE), on/off

• Supplied in moulded packaging with battery CR 2032 No. 548079 6032

• **Special accessories:** Digimatic cable type F, No. 563100 0051 (1 m), No. 563100 0052 (2 m), USB cable type F-USB, no. 563110 0006

Suitable for 512019

## Measuring bridge

- For depth measurements
- Made from hardened and lapped tool steel
- **Holding fixture for dial indicators with shank diameter 8 mm**
- Matt chrome-plated
- Supplied in a wooden case with recess for Ø 58 mm dial indicator

## Kroepelin Digital fast display callipers IP67 with digital display

- Handy fast display callipers for internal and external measurements
- Adjustable increments: 0.001 / 0.002 / 0.005 / 0.01 / 0.02 / 0.05 mm
- Enhanced analogue/digital display with a display area of 250°
- Optional Bluetooth interface (up to 8 devices at once)
- Optional USB and DIGIMATIC interface
- Memory can store up to 100 measurement values
- **Functions:** Control lever, measurement program selection, start menu and functions, data transfer, ON/OFF, O-PRESET
- Supplied with 2x AAA batteries, no. 548079 4003
- **Special accessories:** Digi-matic interface adapter no. 524002 0005 plus Digi-matic cable Type E, no. 563100 0041 (1 m), no. 563100 0042 (2 m), USB cable Type E-USB no. 563110 0005, Bluetooth interface adapter no. 524002 0015

### External fast display calliper

- For quickly measuring walls, metal sheets, foils etc.

## Kroepelin Digital fast display callipers IP67

- Extra-small design, therefore very handy fast display calliper for indoor and outdoor measurements
- Adjustable increments: 0.001 / 0.002 / 0.005 / 0.01 mm
- Enhanced analogue display with a display area of 250°
- Li-ion battery with inductive charging, no battery replacement required
- Optional Bluetooth interface (up to 8 devices at once)
- Optional USB and Digmatic interface
- Memory can store up to 100 measurement values
- **Functions:** Control lever, measurement program selection, start menu and functions, data transfer, ON/OFF, 0-PRESET
- Supplied with charging cradle and Bluetooth dongle (Bluetooth interface adapter optional)
- **Special accessories:** Digmatic interface adapter No. 5240020006 plus Digmatic cable type E, No. 563100 0041 (1 m), No. 563100 0042 (2 m); USB cable type E-USB, No. 5631100005

## Lever dial indicators

INFO

### Angle error

- Always minimise the angle between movement directions of the workpiece.
- The dial test indicator display value will differ from the true value if the workpiece and the direction of movement deviate by any angle. The measuring probe can be aligned through the pivot point of the measuring device such that the angle is minimised.  $\theta$  If necessary, the display and thus the measured value can be corrected to the actual value of the angle  $\theta$  by using the following table.
- Result of measurement = displayed value x correction factor

### Correction for a non-zero angle

Angle	Correction value
10°	0.98
20°	0.94
30°	0.86
40°	0.76
50°	0.64
60°	0.50

#### Examples

If the dial test indicator at various values of the angle shows = 0.200 mm, the measurement results are as follows:

For = 10°, 0.200mm x 0.98 = 0.196mm

For = 20°, 0.200 mm x 0.94 = 0.188 mm

For = 30°, 0.200mm x 0.86 = 0.172mm

#### Note:

A special contact point of involute form can be used for automatic correction; this allows measurements without manual correction for any angle between 0° and 30°.

## SARA® Dial test indicator

DIN 2270

- Ideal for measuring deviations in shape and position, true running and axial run-out as well as alignment work
- Matt chrome-plated metal casing
- Casing and dovetail mounting V-blocks made in one piece for exceptionally rigid clamping
- Supplied with Ø 6 and 8 mm clamping shank

# Mitutoyo Digital height meter QM-Height

ABSOLUTE

Digimatic

USB

ABSOLUTE®

- Measuring heights, steps, groove widths, inner and outer diameters and their distances
- Designed for workshop use
- Available with or without air cushion support
- High accuracy due to electromagnetic inductive measurement principle
- Large LCD with large, easy-to-read digits
- Clearly laid out keypad with symbols for the individual measurement functions
- Multiple zero points programmable
- Optical and acoustic tolerance monitoring
- Choice of mains or (rechargeable) battery power supply
- Wide range of probes for various measurement tasks available as optional accessories

### Technical data

Measuring span (stroke): 0 - 465 mm (350 mm) for QM-H350 and 0 - 715 mm (600 mm) for QM-H600

Resolution: 0.001 mm, can be switched to 0.005 mm

Display: LCD

Error margin:  $\pm (2.4 + 2.1L/600) \mu\text{m}$  L = measurement length in mm

Surface repeatability: 1.8  $\mu\text{m}$  (2  $\sigma$ )

Perpendicularity: 8  $\mu\text{m}$  QM-H350 / 13  $\mu\text{m}$  QM-H600

Measurement system: electromagnetic inductive scale

Measuring force: 1.5 +/- 0.5 N

Weight: 22 kg QM-H350 and 27 kg QM-H600

- Supplied with measuring probe and  $\varnothing$  5 mm carbide ball, reference block, 4x LR6 batteries (No. 548079 4006), protective cover, operating manual, factory certificate
- **Special accessories:** Digimatic cable Type D No. 563100 0031 (1 m), No. 563100 0032 (2 m) USB cable Type D-USB No. 563110 0004

# Mitutoyo Linear height meter Linear Height LH 600E

- Measuring heights, steps, groove widths, inner and outer diameters, their distances and two-dimensional measurements such as reference circle calculation
- Robust and highly accurate height meter for workshop and laboratory use
- Accuracy of  $(1.1 + 0.6 L/600) \mu\text{m}$ , surface precision (2s) of 0.4  $\mu\text{m}$
- Increments adjustable from 0.0001 mm to 0.1 mm
- Pneumatic moving mechanism (floating/semi-floating)
- Direct interaction via the bright, easy-to-read **colour LCD display** (backlit)
- Single-key operation
- Large memory capacity for 50 measurement programs and 60,000 individual measurement records
- Independent adjustment options for travel and measuring speed, rapid positioning (up to 40 mm/s) and gentle contact
- Direct GO/NO-GO confirmation for each measurement
- Rechargeable batteries and an independent compressed air supply (integrated compressor) ensure operation as a stand-alone device
- Languages: German, English, French, Spanish, Italian and Japanese can be selected

**Measurement functions:**

- 1D and 2D measurements
- Height measurement (top/bottom surface)
- Diameter (bore/shaft)
- Calculating an angle
- 2D: Element calculation, distance calculation, pitch circle calculation
- 2D coordinate system setup
- Polar coordinate system support
- Perpendicularity, straightness, incline and planarity detection

**Probe insert:**

- Adjustment options for probe type
- Measurement and storage of probe ball diameter
- Alteration of probe position

**Statistical processing:**

- Execution of simple statistical processes
- Histogram creation

**Technical data:**

- Measurement range (travel) 0 - 972 mm (600 mm)
- Length measurement tolerance  $(1.1 + 0.6 L/600) \mu\text{m}$ , L = measurement length in mm
- Precision (2s): surface 0.4  $\mu\text{m}$ ; bore: 0.9  $\mu\text{m}$ ; perpendicularity 5  $\mu\text{m}$
- Straightness 4  $\mu\text{m}$
- Measuring force 1 N
- Interface: Digimatic input / RS-232 C output, facility to connect a USB data stick
- Power supply: AC adapter/rechargeable battery (Ni-MH), operating time approx. 5 hours
- Weight 24 kg
- **Supplied** in transport packaging with 1x  $\varnothing 5$  mm ball probe, adjustment gauge, battery pack, mains adapter, factory certificate and operating manual

## The multiCOM System

- The perfect interface between **ATORN handheld measuring equipment and a PC**
- Three-fold compatibility: **RS 232 C** und **Digimatic** and **USB**
- For multiple measuring points, can be expanded to over 100 measuring instruments using low-cost USB hubs
- Data transfer can be triggered from the measuring instrument, via a USB foot switch or using the PC keyboard

**ATORN®**

- Measurement value transfer via USB data cable in conjunction with **USB-Com** software or the full version **USB-Com Professional**
- **USB-Com** for connecting a measuring instrument, include in the standard scope of supply of the USB data cable

### ATORN® Signal cable multiCOM

- For connecting **ATORN measuring instruments with a multiCOM** interface to a PC or laptop
- USB cable including USB-COM driver software for transferring measurement values e.g. to Microsoft Excel

**Advantage of the new Digimatic USB connectors:**

Task	Required accessories	USB-ITPAK software	Data format
Read measurement values into any desired software that expects keyboard entry	One USB signal cable per measuring instrument	Software or special driver is not required	Measurement value as keyboard format (HID=Human Interface Device)
Measurement values in ordinary statistics software such as Mitutoyo MeasurLink	One USB signal cable and USB-ITPAK software per measuring instrument	For each cable (measuring instrument), generates a unique, fixed assigned COM port (VCP)	Mux-10 specification with fixed COM assignment
Read measurement values into any desired software that expects keyboard entry	One USB signal cable and USB-ITPAK software per measuring instrument, or an ordinary USB hub	Measuring instrument and foot switch are selected and assigned, stores a process as a sub-program	Transfer of a measurement value test in text format
Measurement values in Excel		Measuring instrument and foot switch are selected and assigned, assumes the entire organisation of an Excel table, meaning that transferred values are written to pre-defined target cells	Measurement log in Excel format with max. 31 characters

**Mitutoyo Software USB-ITPAK**

- For managing multiple connected measuring equipment units and foot switches
- For transferring measurement values in text format (when used as VCP)
- For easily creating logs in Excel
- Starts Excel automatically, offers the option to store accumulated measurement values in Excel
- Organises the Excel table in full with specified columns and rows, including the measurement task start and end
- Option to select the connected measuring instruments and foot switches
- Stores the individual parts of a measurement task as a repeatable program sequence
- Sequences can be repeated several times automatically
- Function keys F1 to F8 can be selected for assignment to data transfer, deletion or skipping
- Compatible with Windows 2000 / XP / Vista / Windows 7 / Windows 8 / Windows 10

Designation	suitable for	art.no.	€
Software for data transfer	MITUTOYO measuring instruments with USB cables	563120 0001	253,-

5102

**Mitutoyo Interface system DMX 1**

- For transferring measurements to a PC from measuring equipment with a data output
- Managed by microcontroller
- 1 measuring instrument can be connected
- RS-232 interface to computer
- Foot switch connection
- **Interface parameters:**
  - 9600 Baud transmission rate
  - 8 data bits
  - 1 stop bit
  - No parity

## Mitutoyo Wireless data transmission U-WAVE

- Quick and reliable method of data transfer without cumbersome signal cables
- Transmits in the 2.4 GHz frequency band with a choice of 15 channels
- Up to 100 transmitters can be connected via one receiver
- Range 20 m
- Receiver is connected and powered via USB
- Slim transmitter design
- Battery life approx. 400,000 data transmissions
- Correct data transfer confirmed on the transmitter by LED and buzzer or LED only (IP67 transmitter model)
- **Transmitter can be used universally by exchanging the connection cable**

### Receiver

- Supplied with USB connection cable, driver software and operating manual

Designation	art.no.	€
Receiver, 2.4 GHz	567502 0001	324,-

5102

### Transmitter U-Wave FIT

- Specially adapted to casings of vernier callipers and/or outside micrometers and QuantuMike

Model	Protection type	Warning sound	suitable for	art.no.	€

## Mitutoyo Wireless data transmission U-Wave Bluetooth

NEW

- Fast and secure data transfer without additional receiver on the end device
- Compatible with smartphones, tablets and Windows
- Bluetooth standard V. 4.2
- Transmitter adapted to the casing of Vernier callipers and outside micrometers
- Range 10m
- 1-year battery life
- Correct data transfer is confirmed on the transmitter by LED and buzzer and/or by LED only (IP67 transmitter model)
- **Attention!** For data transfer you require an app (IOS/Android) and/or software (Windows) on the end device. For IOS and Android devices, please download U-WAVEPAK-BM from your corresponding app store, for Windows applications download the software U-WAVE-BW from [www.sartorius-werkzeuge.de](http://www.sartorius-werkzeuge.de)

## ATORN® Radio receiver i-Stick

NEW

- USB radio receiver for ATORN integrated wireless
- suitable for ATORN measuring instruments with integrated radio module and corresponding compatible devices
- Range 6m
- Manages up to 8 measuring devices
- up to 4 i-Sticks can be connected to one PC
- Frequency band 2400 MHz

Designation	art.no.	€
Radio receiver i-Stick	567512 0001	96,70

5186

## Mitutoyo Mini processor DP-1 VA

- Statistics calculator, printer and data logger in one device
- Documentation of measured values and statistical values by integrated printer
- All Mitutoyo Digimatic measuring instruments can be connected
- Integrated thermal printer, quick and quiet
- Stored data is documented with date and time information
- Logger function (data storage) 1000 measured values with date and time.
- Battery and mains operation
- Foot switch connection socket
- RS-232C interface for data output

### Printable data and calculations

- Measurement values (max. 9999)
- OK/NOK values
- Data volume. max./min. values
- X-bar mean value
- Standard deviation s
- Clamping width r
- Rejects in number and per cent
- Process capability index cp and cpk
- Histogram
- X-bar and r control chart
- Control limits
- Date and time
- Basic unit supplied with printer, power adapter and operating manual, in moulded packaging

## Tool length pre-setting device

- For determining the length and pre-setting when using an optional depth gauge (see below)
- hardened
- Taper and collar ground and black-oxidised
- Height approx. 100mm
- Diameter: SK 40 = approx. 80mm, SK 50 = approx. 105mm
- Mounting slot for depth gauge 16 x 4.5mm
- **Advantage:** Tool lengths can be measured directly beside the machine.
- simple handling
- low space requirement
- Supplied in the box, without depth gauge

Designation	art.no.	€
Tool length pre-setting device, SK 40	<b>531201 0040</b>	<b>250,-</b>

## ATORN® IP67 digital sliding depth gauge Tool length pre-setting device

- With and without measuring hook
- Precision-ground measuring faces
- **KEEPTRONIC** electronics store the zero point, operating keys lock to prevent accidental alteration of the zero point. Battery life approx. 3 years
- Inductive, waterproof FPS measuring system (Fluid Protected Measuring System)
- **multiCOM** data output, can be used as USB, Digi-matic or RS-232
- **Functions:**  
0/ON/Off, mm/inch, PRESET for pre-setting user-defined values
- Supplied with CR 2032 battery, No. 548079 6032
- **Optional accessories:** Data cables, type P-RS 232 / P-Digi-matic / P-USB, no. 512521....

## ATORN® Tool pre-setting devices 350/420/600 with ImageController

- Robust tool pre-setting devices for workshop use
- Quick measuring, setting and testing tools
- SK50 high accuracy spindle with integrated calibration edge
- Pneumatic spindle clamping unit
- Simple setup of different zero points (max. 99)
- Different measuring programs e.g. to carry out concentricity and axial run-out measurements on the tool cutting edge
- CCD camera with telecentric lens
- Dynamic crosshair for automatic measurements
- EZmax software function for calculating and measuring the tool contour
- Supplied ex works, excluding packaging

Base support and reduction with integrated calibration edge

### ImageController Basic

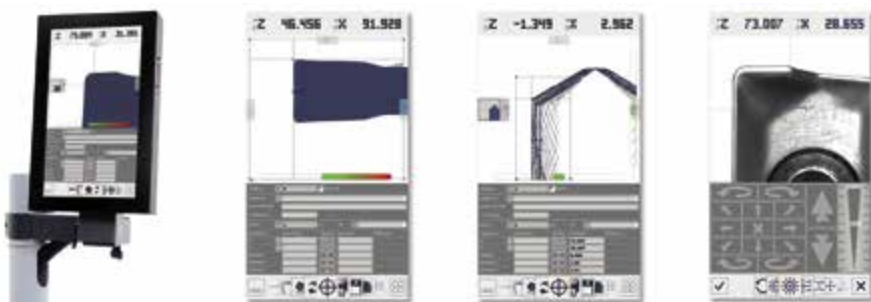

- 7" TFT colour screen with 12x enlargement and dial/push-button operation
- The simple software allows for fast training at minimal training expense
- ATORN 420 and 600 with gap gauge 100 mm

Model	Measurement range mm	Total height mm	Weight kg	Magnification	art.no.	€

### ImageController 1

In addition to ImageController Basic:

- 13.3" TFT touchscreen monitor with 20x magnification
- Stable undertable with adapter tray
- Spindle brake and 4x90° spindle indexing
- Label printing system
- Illuminated cutting edge inspection
- Tool management, projector function
- Turning centre measurement (optional)
- Network-compatible (optional)
- Communication with machine tool (optional)

**Accessories**

- All adapters come with integrated calibration edge
- The barcode print software option allows the printing of QR Code labels
- Measured tool data can be read directly into the machine memory via the tool identification „zidcode“ and the associated scanner. Typos are a thing of the past
- Additional special accessories e.g. vacuum spindle, other adapters available on request

## Gauge blocks

At operational level, gauge blocks are the most important tool for connecting to the metre unit of length. They embody a certain length with a very high level of accuracy, hence the term **material measure**.

Gauge blocks are offered in different tolerance classes (formerly known as **degrees of accuracy**), which differ as follows:

- Tolerance class K** used in our measuring laboratory for checking gauge blocks
- Tolerance class 0** for all exact length measurements, for checking gauge blocks used in operation, for adjusting highly precise measuring instruments
- Tolerance class 1** for checking gauges and adjusting measuring instruments
- Tolerance class 2** as a working and setting gauge in production

Nominal dimension range in mm		Tolerance class 0	Tolerance class 1	Tolerance class 2
above	to	Deviation from the nominal dimension in $\mu\text{m}$	Deviation from the nominal dimension in $\mu\text{m}$	Deviation from the nominal dimension in $\mu\text{m}$
-	10	0.12	0.20	0.45
10	25	0.14	0.30	0.60
25	50	0.20	0.40	0.80
50	75	0.25	0.50	1.00
75	100	0.30	0.60	1.20
100	150	0.40	0.80	1.60
150	200	0.50	1.00	2.00
200	250	0.60	1.20	2.40
250	300	0.70	1.40	2.80
300	400	0.90	1.80	3.60
400	500	1.10	2.20	4.40
500	600	1.30	2.60	5.00
600	700	1.50	3.00	6.00
700	800	1.70	3.40	6.50
800	900	1.90	3.80	7.50
900	1000	2.00	4.20	8.00

	Ceramic ( $\text{ZrO}_2$ )	Steel (Fe)
Vickers hardness (HV)	1350	800
Longitudinal expansion coefficient ( $10^{-6}/\text{K}$ )	9.3 +/- 0.5	10.8 +/- 0.5

## Advantages of ceramic gauge blocks

- Corrosion-resistant** Ceramic gauge blocks cannot corrode and consequently require no corrosion protection treatment
- Non-magnetic** No magnetic dirt, such as chips, will stick to ceramic
- Abrasion-resistant** Mitutoyo ceramic gauge blocks have up to ten-times higher abrasion resistance than steel gauge blocks
- Dimensional accuracy** Ceramic gauge blocks are wholly unaffected by time-related dimensional changes
- Expansion coefficient** Similar to that of steel

## Perfect wringing of gauge blocks

- The wringing should always be performed in a clean place on a soft surface – if a gauge block falls from the hand, it will not be damaged.
- Wipe the preservation substance from the gauge blocks using a soft cloth and petroleum ether.
- Do not use alcohol or ordinary white gas for cleaning purposes for the cleaning; normal white gas for cleaning purposes contains too many impurities, while alcohol always contains aqueous components that can cause corrosion.
- Microfibre cloths are best suited for wiping off the gauge block.
- Check the cleaned gauge block for rust and scratches.
- Burrs on the measuring face are removed with a special Ceraston (ceramic deburring stone) for gauge blocks. Move the gauge block over the Ceraston using very light pressure.

### Wringing long gauge blocks

Cross the gauge blocks at about  $90^\circ$  to each other in the middle of the measuring faces.

Pressing lightly, rotate the gauge block. You will develop a sense of the wringing while sliding the blocks.

Align the measuring faces with each other.

### Wringing one thick and one thin gauge block

Overlap one side of a thin gauge block on one side of a thick gauge block.

While pressing the entire overlapped area, move the thinner gauge block to align the measuring faces with each other.

### Wringing thin gauge blocks

To avoid bending the thin gauge, first wring the smaller gauge block onto the long gauge block.

Then slide the other thin gauge block onto the first thin gauge block.

Finally, remove the long gauge block from the stack.

## SARA® Steel gauge block sets

- Made of carefully selected, high-quality, alloyed special steel, aged, hardened and hand-lapped
- Edges slightly blunted
- Each gauge block is engraved with an individual identification number
- Supplied in a wooden case with individually labelled compartments
- The works inspection certificate provided lists all the gauge blocks with the nominal dimensions and the deviation from the nominal dimensions. It documents traceability to national standards and the test conditions

## SARA® Steel gauge block set, long

- For adjusting larger measuring instruments
- With locating bores for gauge block connector, no. 5360060010
- Made from carefully selected, high-quality alloyed special steel
- Aged, hardened and hand-lapped
- Each gauge block is engraved with an individual identification number
- The works inspection certificate provided lists all the end gauges with the nominal dimensions and the deviation from the nominal dimensions. It documents traceability to national standards and the test conditions.
- Calibration: Test B = 5-point measurement, Test C = 1-point measurement

## Mitutoyo Steel gauge block sets

- Made of carefully selected, high-quality alloyed special steel
- Aged, hardened and hand-lapped
- Edges slightly blunted
- Each gauge block is engraved with an individual identification number
- Supplied in a wooden case with lettering on the individual compartments, incl. MITUTOYO test certificate confirming the centre deviation of each gauge block

## Mitutoyo Ceramic gauge block sets

- Accuracies and possible uses as described under 536001...
- Made of zirconium/ceramic
- Each individual gauge block is engraved with an individual identification no.
- Supplied in a wooden case with individually labelled compartments
- For information on set composition and dimension steps, please see no. 536001...

## Mitutoyo SARA® Individual gauge blocks, steel and ceramic

DIN  
EN ISO  
3650

- Cross-section of steel and ceramic individual gauge blocks: from 0.1 to 10.1 mm: 30 x 9 mm, above 10.1 to 1000 mm: 35 x 9 mm
- Individual gauge blocks are available in the degrees of accuracy 0 and 1 (steel) or 0 (ceramic)
- **Each individual gauge block is engraved with an individual identification no.**
- **Every Mitutoyo gauge block is supplied with a free MITUTOYO test certificate documenting the centre deviation and degree of accuracy, as well as traceability to the PTB standard**
- Mitutoyo gauge blocks: Supplied individually in moulded packaging with a MITUTOYO test certificate

Application example with gauge block connector

**SARA® Gauge block set for monitoring testing equipment**

- Made from steel
- For monitoring test equipment
- **Tolerance class 1**

**For testing outside micrometers of up to 100 mm**

- Test equipment directive VDI/VDE/DGQ 2618, Part 10.1
- Steel gauge blocks for external measurements
- Supplied in a wooden case with individually labelled compartments

for measurement range mm	Individual dimensions	art.no.	€	DAkkS calibration art.no.	€

**For testing sliding callipers of up to 300 mm**

- Test equipment directive VDI/VDE/DGQ 2618, Part 9.1
- Steel gauge blocks for external measurements
- Ring gauges for internal measurements
- Supplied in a wooden case with individually labelled compartments

## ATORN® Precision test pin sets

- For directly measuring bore tolerances, measuring distances between two bores, testing the eccentricity of bushes, testing angles and profiles
- Setting masters for length measurement devices, also for checking bore positions
- For parallelism tests, thread and toothing tests
- Gauge steel hardened to 58 - 62 HRC, single-aged, ground and lapped
- Ø tolerance: <br>Degree of accuracy 1 = ± 0.001 mm <br>Degree of accuracy 2 = ± 0.002 mm
- Total length: Ø 0.30 - 0.99 = 40 mm / Ø 1.00 - 20.0 = 70 mm
- From Ø 1.50 mm, marked with dimensions
- Wooden box with drilled and labelled inserts
- Other set configurations available on request

Are two levels parallel to one another?

Gear, thread, rack measurement

Angle and profile inspections

What is the position of the bore?

Monitoring the spacing tolerances of two bores

Direct measurement of bore tolerances

## Precision test pins, individual

- Description and use as outlined above
- From Ø 0.30 to 0.99 mm without bevel
- From Ø 1.00 to 20.00 mm with single bevel
- Stainless steel test pin or magnetic test pin available on request

Please specify nominal Ø dimension in mm to four digits

### Examples:

- Test pin, Ø 0.53 mm, accuracy 1 = order no. 538020 0053
- Test pin, Ø 16.78 mm, accuracy 2 = order no. 538025 1678

## SARA® Limit plug gauges

**DIN 7150/2** **DIN EN ISO 1938-1** **DIN 7164**

- Go/no-go bore testing
- Tolerances and deviations in accordance with DIN EN ISO 1938-1 and DIN 7164
- Go ends for limit plug gauges are supplied with additional wear allowances in accordance with DIN EN ISO 1938-1
- Test pieces ground and lapped
- Up to Ø 70 mm = go/no-go ends on a single handle; 2-part version above Ø 70 mm
- Material: 540101.... to 540115....: Go/no-go made from wear-resistant gauge steel, hardened and aged  
540120....: Go end hard chrome-plated, no-go end gauge steel
- Intermediate dimensions, other tolerance classes, numerical tolerances, carbide limit plug gauges or flat limit hole gauges are available on request!

## SARA® Limit gap gauge

- For go/no-go shaft testing
- **double-ended**
- Tolerances and deviations in accordance with DIN EN ISO 1938-1 and DIN 7163,
- Go ends of the limit gap gauges are manufactured with additional wear allowances in accordance with DIN EN ISO 1938-1
- Wear-resistant gauge steel, forged blank
- Aged and hardened, test faces ground and lapped
- **ISO tolerance class: h6**

- Intermediate dimensions, other tolerance classes - including numerical tolerances - and other versions, e.g. hard chrome-plated or carbide measuring faces and single-sided limit gap gauges, are available on request
- If required, all round-fit, taper and thread gauges can be supplied with a calibration certificate in accordance with VDI/VDE/DGQ 2618 guidelines

**SARA® Ring gauge****DIN 2250C**

- For setting and testing measuring instruments
- Wear-resistant gauge steel, aged and hardened, ground with lapped bore
- Labelled with actual dimension to three decimal places
- If ordering with calibration (...K), please specify if normal testing with shape deviation or simplified testing (diameter only) is required

## SARA® Thread plug gauges

DIN  
13DIN ISO  
1502

- For Go/No-Go inspection of nut threads
- The Go/No-Go side is made of wear-resistant gauge steel, aged, hardened and fine-ground
- Tolerances and dimensions in accordance with DIN ISO 1502
- Go ends for thread limit plug gauges are manufactured with additional wear allowances in accordance with DIN ISO 1502

• **Tolerance class 6H (\* = tolerance class 5H)**

### For right-hand ISO metric thread, DIN 13

## SARA® Thread ring gauges

**DIN 13** **DIN ISO 1502**

- For testing bolt threads
- Wear-resistant gauge steel, aged and hardened
- Outer diameter milled
- Precision-ground thread
- Tolerances and dimensions in accordance with DIN ISO 1502
- **Tolerance class 6 g**
- **No-Go rings marked in red**
- Threaded gauges for other thread types e.g. trapezoid, pipe, BSF, UN, UNC, UNF, UNEF, NPTF, Pg, Edison screw thread and left-hand thread, as well as other dimensions and tolerance classes are available on request
- If required, all thread gauges can be supplied with a calibration certificate or DKD calibration certificate in accordance with the test equipment monitoring guidelines set out in VDI/VDE/DGQ 2618

## JBO Thread gauges MultiCheck with depth measurement

DIN  
13DIN ISO  
1502

- Simultaneous testing of the thread gauge accuracy and the thread depth, time savings of up to 50%
- Direct reading of the thread depth using the scale on the sliding sleeve
- Thread depth measurements up to 4xD
- Go and no-go ends made of wear-resistant gauge steel, aged, hardened and precision-ground
- Tolerances and dimensions in accordance with DIN ISO 1502
- Easy replacement of test pieces by user
- Replacement test piece, test piece for thread types, thread gauges with reading 0.01, analogue or digital on request

## SARA® Protractor

- Open graduated semicircle made of normal steel
- Scale 0 to 180°, reading 1°, locking screw
- Laser-etched scale, high-contrast, easy-readable, white millimetre division
- Hard-coded aluminium (HRC63)
- Non-scratch, black anodised surface

## Graduator, adjustable

- Open graduated semicircle made from normal steel
- Matt chrome-plated scale with an anti-glare finish
- Scale 10 to 170° with 1° readings
- Bar can be adjusted lengthwise using a locking screw, bar side bevelled 45°

## SARA® Digital graduator

- Adjustment and zeroing possible on any level surface
- Measuring bar can be fixed in any position using the knurled-head screw
- Stainless steel, measuring edges precision-ground
- Measurement range: 180°
- Readings: 0.05°
- Accuracy: +/- 0.3°
- Functions: user-defined zeroing, hold value, rotate display for overhead measurement
- Supplied in a synthetic leather pouch with 1x CR2032 battery, no. 548079 6032

542007 0120

## SARA® Universal goniometer with magnifier and fine adjustment

- Reading parts matt chrome-plated
- Parallax-free reading with magnifier
- Scaling 4 x 90°, reading 1/12° = 5 min.
- 3 rails, 150, 200 and 300 mm, can be repositioned and locked
- 1 additional angle

Application example with additional angle

## SARA® Digital universal goniometer

Werk-  
norm

- Digital display with simultaneous display of values in degrees, minutes and seconds, and decimal
- Automatic switch-off
- Simple adjustment using fixed reference points
- Fully movable and lockable measuring bar
- 150 and 300 mm rail length
- Fine adjustment for precisely calibrating angles
- **Functions:** ON/OFF, ZERO for user-defined zeroing, reverse counting direction
- Supplied with 2x rails, additional angle, 60 x 50 mm framing square and CR2032 batteries, no. 548079 6032

USB

- Digital display in degrees or minutes, zeroing in any position
- Hardened stainless steel measuring bar and measuring edges
- Automatic switch-off after 10 minutes of inactivity
- Simple adjustment using fixed reference points
- Fully movable and lockable measuring bar
- Fine adjustment for precisely calibrating angles
- Ability to pre-set angles
- Can be combined with height meters using the holder provided
- Battery life up to 2,000 hours
- **Functions:** ON/OFF, PRESET for pre-setting user-defined angles, DATA/HOLD, switch from decimal to degrees and minutes, ZERO for user-defined zeroing, reverse counting direction
- Supplied with height meter holder and CR2032 battery, no. 548079 6032
- **Optional accessories:** Digimatic cable type F, no. 563100 0051 (1 m), no. 563100 0052 (2 m); USB cable type F-USB, no. 563110 0006

## Precision flat ruler

**DIN 874**

- Alloyed special steel, ground on all sides
- Test surface in accordance with DIN 874
- Form A: rectangular cross-section  
Form B: I-shaped cross-section with two handling slots
- Accuracy 0: for precision testing work  
Accuracy 1: for inspection work  
Accuracy 2: for general workshop use
- With etched test result
- Other lengths and stainless steel version available on request
- Versions from 1.500 mm upwards supplied ex works, excluding packaging

## Foil strips (precision gauge strip)

- For setting up tools and moulds
- Adjusting equipment and apparatus
- Aligning machinery and altering bearing play
- In plastic boxes, easy to roll out
- Roll 150 mm wide x 2,500 mm long
- **Materials:**  
548530....: Brass (CuZn 37/Ms 63)  
548535....: Unalloyed steel (SM band steel)  
548540....: Stainless steel (18 Cr 9 Ni)

## IG Small hydraulic stand with magnetic base

- Particularly suitable for use with levers
- Ideal in confined spaces
- Extra-powerful pot magnet, non-switchable
- Dial indicator holding fixture, Ø 8 mm and dovetail
- **Version:**
  - 1 Hydraulic clamp
  - 2 Dial indicator holding fixture, Ø 8 mm and dovetail
  - 3 Joints, fully movable
  - 4 Fine adjustment on base
  - 5 extra-strong permanent magnet
- central, hydraulic clamping
- Supplied in cardboard packaging

Magnetic foot Ø x H mm	Projection mm	art.no.	€	
35 x 30	150	<b>550505</b> 2000	<b>118,-</b>	
				5150

## IG Hydraulic magnetic measuring stand

- Central hydraulic clamping mechanism
- Fine adjustment
- Clamp force infinitely variable up to the maximum
- Articulated arms can rotate through 360° and swivel through 180°
- Dial indicator holding fixture, Ø 8 mm and dovetail
- **Design:** hydraulic clamp, central joint, ball joints, switchable magnetic foot with V-shaped underside
- Supplied in cardboard packaging, with or without magnetic foot

## Mitutoyo Magnetic stand with dial test indicator

0,01 mm

- Powerful pot magnet
- Holding fixture for magnetic stand
- Dial test indicator measurement range 0.8 mm
- Readings: 0.01 mm
- Contact point length 20.9 mm
- Supplied in plastic packaging

Description	art.no.	€	DAkkS calibration	
			art.no.	€
Magnetic stand with lever dial indicator	525501 0112	140,-	071250 D001	18,-

5102

## WNOGA Articulated stand for dial test indicators

- For precisely positioning and aligning workpieces
- Centring bores
- The stand is clamped directly into the machine chuck by means of a straight clamping shank
- All joints are movable
- All joints fixed by means of a central clamping screw
- Dial indicator holding fixture, Ø 8 mm, with V-block clamp for dial test indicators
- Cylindrical clamping shank (Ø 8 mm, length = 40 mm)

Description	art.no.	€
Articulated stand	550510 0013	91,-
Articulated stand with dial test indicator, measurement range 0.8 mm, 0.01 mm readings, sensor tip length 20.9 mm	550510 5000	188,50

## ATORN® Measuring and inspection plates

- **Accuracy in accordance with DIN 876/0**
- Completely non-warping, tension-free, non-corrosive and acid-resistant
- Non-magnetic and non-conductive, with no temperature sensitivity due to a low thermal expansion coefficient
- Hard and wear-resistant: Hardness grade 6 - 7 on the Mohs scale.
- Homogenous fine-pored material structure results in consistent hardness, which prolongs service life and maintains accuracy
- Maintenance-free; only dirt removal is required to prevent measurement accuracy from becoming impaired
- High contact area ratio due to diamond-lapped measuring faces
- All measuring and inspection plates are supplied
- with a manufacturer's test certificate
- DKD certificate available on request
- Prices ex works, including packaging

**Manufacturer's test  
certificate included**

**All prices are ex works and  
include packaging!**

## Concentricity gauge

- For testing the radial and axial run-out accuracy of rotating parts
- Size 0350 tailstocks with V-block attachments

### Base plate design:

- Special cast iron
- Finely ground supporting surface
- With 2 T-slots, for holding tailstocks and measuring stand
- Slot width 10 mm (12 mm\*)
- Distance between T-slots 58 mm (100 mm\*)
- Planarity in accordance with DIN 876/2

### Tailstock design:

- Adjustable
- Left-hand tailstock with fixed tip, right-hand tailstock with movable tip
- Quill  $\varnothing$  16 mm (22 mm\*)
- Movable tip travel approx. 10 mm
- Hardened steel quill and centre, precision-ground

### Measuring stand design:

- With fine adjustment
- Locating bore 8H7
- Column  $\varnothing$  and height: 16 x 200 mm (22 x 240 mm\*)
- Cross-arm  $\varnothing$  and length: 16 x 60 mm (16 x 125 mm\*)
- Base plate supplied with tailstocks and measuring stand

\* Values in brackets are for concentricity gauge no. 5547600450

## Angle plate

- With clamping slots, precisely machined on both sides
- Angle precision in accordance with DIN 875 (clamping surface support)
- Made of high-density special casting with high wear-resistance, supporting surface and clamping surface machined at angles to one another, planed lateral faces, cast clamping slots,
- **Quality 3:** Bearing and clamping surface finish planed, planarity according to DIN 876/3
- **Quality 1:** Bearing and clamping surface ground, planarity according to DIN 876/2
- **Quality 0:** Supporting and clamping surface precision-ground, planarity in accordance with DIN 876/1

### Complete set

- One vice in each size (Size 1/2/3), including 1 base jaw and 1 V-block jaw
- 1 pair of plastic jaws each (15 / 25 / 35 mm jaw width)
- 1 pair of stepped jaws each (15 / 25 / 35 mm jaw width)
- 1 pair of prism jaws with positioning pin (15 / 25 / 35 mm jaw width)
- 1 Midi divider (Ø 1.2-6.0 mm) and 1 Mini divider (Ø 0.4-3.5 mm)
- 2 bench vice stands
- 3 holding plates including screws
- 1 pair of double V blocks with clamp, 25 x 20 x 20 mm, clamping range 2-15 mm
- 4 pin wrenches
- Supplied in a sturdy carry case

## ATORN® Light metal spirit level

**• With and without magnet**

- Strong aluminium rectangular profile
- Non-slip contact due to silicon pads on rear
- Rubber end caps act as shock absorbers
- Laser-marked round horizontal vial
- Precision readings due to additional markers for the zero position and 2% gradients
- Magnifying effect for improved readability
- 270° vial viewing angle without protruding edges
- Vials made from high-strength, unbreakable polycarbonate
- Measurement accuracy in normal position: 0.5 mm/m
- 556508.... Lengths 800 to 1200 mm with additional scale on the upper measuring face and 2 adjustable measuring and scribing attachments
- 556509.... with magnetic sole

Scale with marking-out attachments for lengths of 800 - 1,200 mm

Precision readings

## ATORN® Electronic inclinometer

- Made from thick-walled four-chamber hollow aluminium profile, cross-section 60 x 26 mm, with two milled measuring faces
- Impact-resistant protective ends
- Display can be switched between degrees, percent or millimetres/metre
- HOLD function (measurement value memory)
- Switchable acoustic signal for 0° or 90° position
- Easy to read thanks to high-contrast 16 mm high LCD display
- Arrows in the display indicate the direction in which the device should be moved to reach the 0° or 90° position
- Display flips automatically for overhead readings
- Error margins:  
at 0° to 90° = 0.05°  
at 1° to 89° = 0.2°
- Extremely easy horizontal and vertical adjustment using the integrated measurement computer
- Battery life approx. 300 hours
- Supplied in sturdy plastic tubing with 6LR61 battery, no. 548079 4022

## Inclinometer

- For measuring planarity, perpendicularity and angularity
- **Digital display**
- Precision supporting surface in an aluminium frame with V on one side
- Display flips automatically when rotated through 180°
- Accuracy: Factory standard  
Power supply: 9 V battery  
Operating temperature: -5°C to 50°C  
Dimensions: 153 x 49 x 31 mm  
Weight: 300 g
- Supplied in a case with 6LR61 battery, no. 548079 4022

**TSCHORN** 3D probe

- New and improved model
- Minimised guide play and more stable positioning
- Optimised button mechanism
- For determining the spindle centre when aligning workpieces on X, Y, and Z axes
- To protect the measuring unit, large over-travel allowances have been incorporated into the probe unit
- Probe insert with predetermined break point at the far top
- Probes can be replaced by the user
- Supplied with standard probe insert

Size comparison: standard probe / slim-line probe

**ATORN**<sup>®</sup>  
Performance demands quality

## ATORN® Universal 3D probe

- For determining the spindle centre when aligning workpieces on X, Y, and Z axes
- Easily readable dial indicator
- True-running accuracy can be calibrated via 4 adjustment screws in the casing
- Robust metal casing
- No plus/minus sign problems, as actual value readings are independent of the direction
- Automatic probe radius compensation
- Ceramic predetermined break point prevents damage to the mechanism if maximum probe displacement is exceeded
- Probes can be replaced by the user
- For use on all machine tools including EDM equipment due to insulation between the probe insert and the holding fixture
- Dial indicator diameter: 57 mm  
Casing width: 65 mm  
Clamping shank: 20 mm Ø x 50 mm, similar to DIN 1835B or DIN 69871A, SK 40  
Probe ball diameter: 4 mm
- Supplied in moulded packaging, including operating manual

Move towards the workpiece edge

When contact is made with the edge, the display will change

If the small and large pointers are at "zero", the spindle axis and contact edge are exactly in line. The machine control system is zeroed.

## Zero adjuster, height 50 mm

- For setting machine reference points
- The adjustment device is placed on the workpiece and the tool (e.g. milling cutter) moved towards the spring-mounted contact surface until both pointers on the dial indicator are at zero. The lower edge of the tool is now positioned at exactly 50 mm  $\pm$  0.01 mm. The reference dimension of 50 mm is entered into the machine control system.

**Caution:** Process may only be performed while the tool is stationary.

- Base body and probe insert are case-hardened (60 HRC) and finely ground
- Two guide diameters for optimum handling of the contact surface
- 558020 0005: six magnets in the base, plane-ground
- Supplied in a wooden case with dial indicator, operating manual and measurement log

## Height adjustment device for lathes

NEW

- For quick and easy determination of the reference point in the lathes
- Suitable for horizontal and vertical use
- Can be used only on electrically conductive materials
- **With illuminated display,** LED indicators with good all-round visibility
- Height tolerance  $\pm$  0.01 mm
- Travel reserve 2 mm
- Hardened probe tip, functional surfaces ground and lapped
- **Base equipped with three magnets for better grip when used horizontally**
- Supplied in wooden box with works certificate incl. 2x SR 44 batteries no. 500534 0001

Height mm	Support surface $\varnothing$ mm	Sensor surface $\varnothing$ mm	art.no.	€
60	32	19	558030 1060	203,-

5162

## Height adjustment device

- For quickly and easily determining the axial reference point for the machine spindle without damaging the workpiece.
- Can only be used on electrically conductive materials.
- **With illuminated display,** LED indicators with good all-round visibility
- Height tolerance  $\pm$  0.01 mm
- Over-travel margin 3 mm
- Hardened probe insert, functional faces ground and lapped
- **With three magnets for better grip**
- Supplied with 2x SR44 batteries, no. 500534 0001

Red lighting all the way around upon contact

558030 0001

50	55	14.0	558030 0001	274,-

5162

## Edge probe for rotary applications

- For determining tool reference faces and edges
- **Recommended speed: approx. 600 rpm**
- All parts hardened and burnished
- Ground clamping and contact diameters
- Surfaces between holding fixture and probe head lapped
- Probe head is connected to the clamping shank via an extension spring
- Alignment accuracy 0.01 mm
- Supplied in a case

Clamping Ø mm	Contact Ø mm	Total length mm	art.no.	€
10	10 and 4	90	558040 0001	48,80
10	10	84	558040 0002	48,80
6	6	50	558040 0003	48,80

5162

## Edge finder with illuminated display

- For positioning reference points on metallic workpieces
- Two-axis and three-axis measurements available
- Can also be used to determine the centre or diameter of a bore
- The distance from the spindle centre to the contact surface is 5.00 mm
- Can only be used on electrically conductive materials
- True-running accuracy ± 0.01 mm
- Hardened steel body with ground functional surfaces
- LED indicator lamps with good all-round visibility
- Supplied with batteries

## SCHWEIZER Stand magnifiers and pocket microscope Tech-Line

### Stand magnifiers

- Ideal for all planar tests, as a single stand magnifier or as a measuring magnifier with duo scale
- Fixed focus or vario-focus versions
- Aplanatic silicate glass lens, scratch-proof
- Large depth of field and high-contrast view
- Casing made from shock-proof, transparent plastic
- Insertion guide for effortlessly retrofitting with duo scales

Designation	Magnification	Lens Ø mm	art.no.	€
Fix-Focus	8x	30	560106 0008	31,30
Fix-Focus	10x	30	560106 0010	38,90

560106 1008

560106 0008

5164

### Duo scales

- Can be used with fixed-focus and vario-focus stand magnifiers, and the pocket microscope in conjunction with a stand adapter
- Two scales (Duo-Scale) on one plate: Ø 25 mm for stand magnifiers 8x and 10x, Ø 2.5 for pocket microscope 40x, 50x and 60x
- Scratch-resistant glass
- Hard chrome scale on the underside to prevent parallax errors

## ATORN® LED magnifier lamp

- Even, largely anti-glare lighting provided by 90 LEDs (colour temperature 6,500 K)
- Extremely long-life LEDs, no risk of breakage
- High-quality glass lenses with 1.75x or 2.25x magnification
- Metal arm with plastic covering, no risk of pinching
- Particularly slim magnifier casing with replaceable magnifier cover
- Extremely low power consumption (only around 9 W!)
- Table clamp

Magnification	Lens Ø mm	Projection mm	art.no.	€
1.75-times	125	1060	<b>560160 0175</b>	<b>198,50</b>

5164

## SCHWEIZER Cleaning set

- High-end cleaning solution for all glass and plastic lenses and magnifiers
- Anti-static effect
- High-quality microfibre cleaning cloth included

Designation	art.no.	€
Cleaning set	<b>560131 0001</b>	<b>10,90</b>

5164

## Stereoscopic zoom microscope, trinocular

- Version with 3rd lens barrel to adapt e.g. a camera
- sturdy, robust microscope
- cordless battery-powered operation (optional)
- Magnification 7x to 45x
- Eyepiece pair 10x, with dioptic adjustment
- Working distance 100mm
- Integrated handle for easy transportation
- Equipped with long-life LED direct/backlight, colour temperature 6300 K
- Supplied with eyepiece pair 10x and power supply

Designation	art.no.	€
Stereo microscope	<b>561052 0001</b>	<b>509,-</b>
	5169	

## USB ocular camera for microscope

- Low-cost introduction to image/video transmission and visual measurement
- USB camera with EDGE technology for enhanced image reproduction
- Compatible with virtually all stereo and measuring microscopes using an adapter
- Adapter for Ø 23 mm, 30 mm/30.5 mm eyepieces and C-mount supplied
- USB 2.0 interface
- Images can be saved in all standard formats
- Optional reticle
- Simple measuring options for circles, angles, spacing
- Calibration function through supplied calibration standard
- Supplied with USB eyepiece camera with DinoCapture software and calibration standard

Designation	Resolution mm	art.no.	€
USB retrofit camera	1.3 MP	<b>561058 0005</b>	<b>399,-</b>
		5169	

## USB digital hand-held microscope

- For industrial inspection, quality control, assembly, repair, material defect analysis
- Low-cost introduction to image/video transmission and visual measurement
- CMOS Color Sensor
- Cameras available with EDGE technology for improved image reproduction
- Micro touch snapshot function for saving live images/videos directly
- Transfer of images to smartphone or tablet through optional WiFi adapter
- USB 2.0 interface
- Casing: Ø 32 x 105 mm
- DinoCapture software: 2D image measurement (lines, radius, diameter, circumference, polygon, angle) input of texts, output of measuring data in Excel at the click of a mouse
- Supplied with: USB hand microscope with USB cable L=1.8 m, DinoCapture software on CD

- 5610570.... Plastic casing, sensor resolution 1.3 MP, image resolution 1280x,1024 pixels

**ATORN® Digital microscope Inspector**

- digital microscope system for visual inspection and for simple baseline measurements
- quick display of live image in full HD resolution (1080p)
- simple operation and control through integrated software
- outstanding representation of the workpiece thanks to image-enhancing functions
- no time-consuming recalibration for zoom alterations
- programmable buttons for quick and easy operation
- network-compatible for documenting and archiving images
- available with LED incident light or with LED direct/backlight
- 2.2x to 122x magnification, even with standard lenses
- Supplied with 5x lens, keypad, mouse, power supply, HDMI cable, Mini-USB cable, USB memory stick
- HD-Ready or FULL-HD monitor available as optional accessories

## Mitutoyo Workshop measuring microscope

- Compact and robust base body made from special cast iron
- Coordinate measuring table
- Dovetail guide with rack and pinion drive for adjusting the microscope head to alter focus
- Standard magnification 30x (lens 2x, eyepiece 15x)
- Test item displayed without inversion
- Backlighting, incident lighting and ring lamp
- Replaceable crosshair graticule built into the eyepiece
- Additional graticules (e.g. for determining radii or for thread measurement) are available on request
- Angle measuring device, can be rotated through 360°, Vernier scale 6 minutes
- Supplied with 2x lens, 15x eyepiece, graticule with crosshair, measuring table **with digital built-in micrometer no. 505404 0001**, LED backlighting and LED incident lighting, LED ring lamp with holding fixture adapter, 2 spare bulbs (24 V), spare fuse (0.5 A), covering hood, power supply for connection to 230 V / 50 Hz, Operating manual, shipped in disposable packaging

QM-DATA can be connected

### Set

- Contains 7 pcs.: TM 505/510 microscope, lens with 2x magnification, eyepiece with 15x magnification, crosshair graticule, 2 digital built-in micrometers, ring lamp with holding fixture adapter

## Mitutoyo Measuring projector PJ-PLUS

NEW

- Profile projector for accurate transmitted and incident light testing of small to medium-sized workpieces
- Clear image across the entire screen  $\varnothing$  of 315 mm
- Screen can be rotated 360° with cross hairs
- 10x lens with separate semi-opaque incident mirror included
- LED transmitted and incident lighting with infinitely variable luminous intensity control for long service life at low power consumption
- Telecentric lighting system for uniform lighting
- Fanless design prevents contaminants from entering the unit
- Built-in digital displays for reading the angle of the rotatable screen  
Switch between 1 arc minute or 0.01 degree, with 0.001 mm resolution for the X and Y axis
- RS-232C interface for X and Y axis
- **562001 1010** with 100 x 100 mm coordinate measuring table, fine and quick adjustment across the entire movement range, integrated glass scales, max. workpiece weight: 10 kg
- **562001 2010** with 200 x 100 mm coordinate measuring table, fine and quick adjustment across the entire movement range, integrated glass scales, max. workpiece weight: 8 kg
- Supplied with power cable for 230 V / 50 Hz, covering hood, 10x lens, anti-glare protection, operating manual in disposable shipping packaging
- **Calibration on request**

## Mitutoyo Measuring projector PV-5110

- Robust, easy-to-operate stand projector
- Clear image across the entire screen area, Ø 508 mm
- 360° rotatable screen, with crosshairs, locking, fine adjustment
- Built-in digital angle reading, can be switched from 1 arc minute to 0.01 degree
- Halogen backlighting and incident lighting
- 10x lens included
- 200 x 100 mm coordinate measuring table, fine adjustment across the entire movement range and quick adjustment along both axes, built-in glass scales, supporting surface of the table can be swivelled  $\pm 5^\circ$  for better workpiece alignment, max. workpiece weight: 5 kg
- Magnification uncertainty: 0.1 % backlighting, 0.15 % incident light
- Hand wheel on the side of the casing for adjusting the measuring table height to alter focus
- Supplied complete with two individually adjustable halogen incident lights; holding fixture for optional digital display unit; 230 V / 50 Hz power cable; 10x lens set; operating manual; shipped in disposable packaging
- **Calibration on request**

## Mitutoyo M2 data processing system

NEW

- Intuitive 2D data processing system
- Measurement points recorded by way of crosshairs (562705 0001) or optical edge sensor (562705 0002)
- Easy to measure points, degrees, circles, angles, etc.
- Constructs measurement points and links various elements
- Parts program development in Teach-in process
- Tolerance inspection in accordance with DIN/ISO
- Comprehensive measurement reports
- A Windows 10-compatible PC is required to use the software.
- M2 measurement software supplied with interface box, connection cable, device holder for optional tablet PC on the projector housing, power supply and USB cable

Tablet PC not included in scope of delivery

Designation	art.no.	€
M2 data processing system without edge detection	562705 0001	1.750,-
M2 data processing system with edge detection for PJ and PH projectors	562705 0002	3.000,-
M2 data processing system with edge detection for PV projectors	562705 0003	3.000,-

## Mitutoyo Digital display unit LINEAR SCALE model KA200

- Compact design
- Easily readable 15 mm high LED digits
- For connecting model AT 103, AT 116, AT 112F and AT 715 scales on two or three axes  
For connection to turning and milling machines (adjustable mode)
- Adjustable resolution: 0.001 mm and 0.005 mm resolution (for AT 1xx scales)
- Display: 8 digits, (-) sign, zero point
- Connection: 230 V / 50 Hz
- Power consumption: 30 VA
- Supplied with mains power cable and operating manual, shipped in disposable packaging

Connectable axes	Dimensions L x W x H mm	Weight kg	art.no.	€
2	300 x 70 x 167	1.25	574021 2004	586,-

5105

## Mitutoyo Standard target

- For comparing screen displays on measuring projectors
- Standard targets are reference drawings on which specific geometric shapes, e.g. circles, are drawn as fixed dimensions for the different magnifications.
- **With radii**
- Made from low-warp, transparent plastic, coated with a protective layer
- Geometric shapes printed on the underside
- Line widths: 0.05, 0.08, 0.10 and 0.12 mm, different for even millimetre and intermediate dimensions.  
Linear division line accuracy: 0.05 mm over 300 mm. Thermal expansion: 0.08 mm per 10° C
- Standard targets in other versions (e.g. for threads) available on request

Designation	Measuring plate Ø mm	art.no.	€
Standard target, type RA (radii)	300	562520 3003	549,-
Standard target, type RA (radii)	500	562520 5003	1.129,-

## Mitutoyo SurfTest SJ-210 surface roughness tester

Digi-  
matic

USB

- Handy mobile test device, designed for use in production environments
- Compact design
- Easy to handle
- Suitable for measuring surface roughness directly on the clamped workpiece during production or stationary inspections
- Large, easy-to-read 6 cm (2.4") colour LCD display, can be rotated electronically
- Profiles displayed in real time
- Integrated memory for 10 measurement conditions
- Memory can be expanded with a micro SD card up to max. 2 GB: e.g. 500 measurement conditions + 10,000 measurement values or 500 measurement conditions + 500 profiles, analysis software on request
- With RS232C, Digimatic and USB interfaces
- Foot switch connector
- Colour-based tolerance evaluation
- Allocation of access rights
- Choice of 16 languages
- Switchable mains or battery operation
- Feed unit can either be integrated in the device or used separately with a connection cable
- Motorised feed with up to 3 user-selectable measuring speeds
- Probe system skid radius 40 mm, skid pressure force < 400 mN
- Probe tip geometry in accordance with DIN EN ISO 3274, radius 2 µm, point angle 60°
- Double skid system for measuring sheet metal in accordance with DIN EN ISO 10049 available on request, comprehensive optional accessories on the following pages
- **Technical data**
- **Profiles:** Roughness profile (R), DF profile, R motif
- **Standards:** DIN EN ISO, VDA, ANSI, JIS, user-defined conditions
- **Measurement range:** 360 µm
- **Evaluation parameters:** Ra, Rq, Rz, Ry, Rp, Rv, Rt, R3z, Rsk, Rku, Rc, Rpc, RSm, Rmax, Rz1max, S, HSC, Rz1S, Rppi, RΔa, RΔq, Rlr, Rmr, Rmr(c), Rδc, Rk, Rpk, Rvk, Mr1, Mr2, A1, A2, Vo, Rpm, tp, Htp, R, Rx, AR
- **Cut-off lengths:** λc: 0.08, 0.25, 0.8 and 2.5 mm
- **Digital filters:** Gaussian, 2CR75, PC75
- **Number of individual measurement sections:** 1 to 10
- **Limit wavelength λs:** Set to specification
- **Measuring force:** 0.75 mN
- **Power supply:** Mains adapter 230 V, 50 Hz and fitted battery
- Supplied with roughness standard, mains adapter, protective film for the display, carry bag and operating manual

Use with height meter 5305020300 via adapter 5705310016

## Mitutoyo Surftest SJ-210 surface roughness tester

NEW

Digi-  
matic

USB

- Portable mains-independent skid system for determining surface roughness
- Separate feed allows measurements in hard-to-reach places, as well as overhead measurements
- Dust-protected, touch-sensitive control panel and integrated printer
- Extremely easy-to-use and intuitive menu navigation
- Measurement results / profiles shown clearly on a 14.5 cm (5.7") colour display
- 16 languages
- Storage of up to 10 measurement conditions
- Statistics function and colour-coded tolerance analysis
- Customisable password protection
- Storage of measurement data on an optional SD card
- Automated calibration function / can be calibrated based on the average of up to 12 measurements
- Choice of mains or battery operation
- Profile method with single skid system
- Measurement range: X-axis feed = 16 mm, S feed = 5.6 mm
- 60° contact point with 2 µm radius / measuring force 0.75 mN
- Measuring speed: 0.25 mm/s, 0.5 mm/s, 0.75 mm/s
- Analysis parameters: Ra, Rq, Rz, Ry, Rp, Rv, Rt, R3z, Rsk, Rku, Rc, R<sub>Pc</sub>, R<sub>Sm</sub>, R<sub>max</sub>, Rz1<sub>max</sub>, S, HSC, RzJIS, R<sub>ppi</sub>, RΔa, RΔq, R<sub>lr</sub>, R<sub>mr</sub>, R<sub>mr</sub>(c), R<sub>dc</sub>, Rk, R<sub>pk</sub>, R<sub>vk</sub>, Mr1, Mr2, A1, A2, Vo, λa, λq, Lo, R<sub>pm</sub>, t<sub>p</sub>, H<sub>tp</sub>, R, RX, AR, W, AW, Wx, Wte
- Cut-off length: 0.08 mm / 0.25 mm / 0.8 mm / 2.5 mm / 8 mm
- Number of individual measurement sections: 1x, 2x, 3x, 4x, 5x, 6x, 7x, 8x, 9x, 10x, unset length
- Digital filter: 2CR75 / PC75 / Gaussian
- Parameters in accordance with DIN EN ISO, VDA, JIS, ANSI and MOTIF
- Data communication: Digimatic, RS-232, SD memory card
- Supplied with roughness standard, mains adapter and 5 rolls of spare paper

Use with height meter 5305020300  
via adapter 5705310016

Packet with 5 rolls of graph paper	563030 0101	29,-

5103

## ATORN® Surface roughness tester easyRoughness

- Highly accurate roughness meter for workshop and laboratory use
- Compatible with skids and free probes
- Wide range of special measuring probes
- Measuring probes can be extended up to 500 mm
- Automatic calibration
- Measurement lengths configurable from 0.5 to 1.5 mm
- Configurable measuring speeds
- Calibration of up to 8 measuring probes
- Storage of measurement conditions with images
- Configurable languages: German, English, French, Italian, Spanish, Polish, Chinese

### • Technical data

Measured values:

DIN/ISO: Ra, Rz (DIN), Rmax, R3z, Rt, Rq (RMS), Rk, Rq, Rv, Rpk, Rvk, MR1, MR2, Rpc, C1, C2, contact ratio Rmr, CO, Cz, VO Rdg, RLO

JIS: Ra (Jis), Rz (JIS)

ISO 12085: R, AR, Rx

Measurement ranges: Ra, Rq 0 - 20.00 µm Rest 0 - 350 µm

Measurement range in Z: approx. 450 µm

Contact point: Diamond tip 5 µm 90° (standard) or 2 µm 60° (optional)

Measuring force diamond: < 0.5 mN

Probe system: analogue hall effect technology with high-linear output

## Mitutoyo Linear scales

INFO

### Digital length measurement system

The DRO system (**D**igital **R**ead **O**ut) newly developed by Mitutoyo includes the linear scales of the AT 100 series and the display units (counters) of the K series. Linear scales and counters offer maximum precision in reading axial adjustments of machine tools and measuring instruments.

The DRO system can be assembled to optimally fulfil specific tasks such as use on turning, milling or grinding machines.

The linear scales are supplied in an attachable state and are easy to install. The performance of machines and facilities is increased, read errors are eliminated. Backlash in guides or adjustment backlash is apparent because the dimension of every movement of the slide or a guide piece is read. Linear errors in an axis of travel can be compensated for on the display unit. Fitting must take place parallel to the axis (within 0.2 mm on scale length), or else deviations may arise.

The linear scale systems are offered with three cross sections:

**AT 116** Standard profile (cross section 22 x 35 mm) up to 1500 mm with permanently attached connection cable

**AT 715** Standard profile with ABSOLUTE scale (cross-section 22 x 36.5 mm) up to 1800 mm with permanently attached connection cable

AT 116

AT 715

The aluminium housing of the linear scale is fitted with an oil-resistant plastic lip on the encoder side. The connection cable is housed in steel and shielded. If the standard length of the connection cable is not sufficient, extension cables (special accessories) are available.

The easy-to-use display units of the K series are available in different models for a wide variety of tasks.

Functional principle AT 112F / AT 116

### Caution!

When selecting suitable scales, please always take into account the effective travel of your machine that can be adjusted by hand. Please also bear in mind that a mini-profile AT 112F is available for use in confined installation surroundings.

	KA counter
Zero position	•
ABS origin only AT 715	•
Adjustment of resolution	•
Switchable counting direction	•
mm/inch switching	•

## Mitutoyo LINEAR SCALE AT 116 digital length measurement system

- **Standard profile**
- Installation-ready glass scale with aluminium profile casing
- Fasteners included
- Profile cross-section 22 x 35 mm (without encoder unit)
- **Accuracy:** (5 + 5L/1000) µm at 20 °C
- Supplied with operating manual and factory certificate, shipped in disposable packaging
- **Caution:** When selecting suitable scales, please always take into account the effective manually adjusted travel for your machine. Please also bear in mind that a mini profile AT 112F is available for use in tight installation spaces.

**With factory certificate!**

## Mitutoyo Digital display unit LINEAR SCALE model KA200

- Compact design
- Easily readable 15 mm high LED digits
- For connecting model AT 103, AT 116, AT 112F and AT 715 scales on two or three axes  
For connection to turning and milling machines (adjustable mode)
- Adjustable resolution: 0.001 mm and 0.005 mm resolution (for AT1xx scales)
- Display: 8 digits, (-) sign, zero point  
Connection: 230 V / 50 Hz  
Power consumption: 30 VA
- Supplied with mains power cable and operating manual, shipped in disposable packaging

Connectable axes	Dimensions L x W x H mm	Weight kg	art.no.	€
2	300 x 70 x 167	1.25	574021 2004	586,-
3	300 x 70 x 167	1.30	574021 2005	705,-

## Mitutoyo Extension cable

- For **LINEAR SCALE** Length measurement systems
- Ready-made, steel-covered and shielded extension cable including connector
- **Caution:** Only one extension cable may be connected at any time, otherwise electronic data transfer may be impaired.  
If you require longer cables, please contact us.

## TC layer thickness measuring instrument

- For quick and non-destructive layer thickness measurement of coatings on ferro-magnetic base materials and non-ferrous metals
- With external (TE) probe
- Small, handy device
- Easily readable LCD display
- RS 232 C interface
- Measurement principle
  - Model TE-F** for measuring non-magnetic layers on a ferro-magnetic base material (steel/iron)
  - Model TE-N** for measuring non-conductive layers (anodic oxide layer, painted surface protection etc.) on non-ferrous metals
  - Model TE-FN** combination of both aforementioned measurement principles
- Measurement range 0 to 1250  $\mu\text{m}$   
Resolution < 100  $\mu\text{m}$  = 0.1  $\mu\text{m}$  / > 100  $\mu\text{m}$  = 1  $\mu\text{m}$   
Minimum strength of base material 0.3 mm  
Smallest measuring area  $\varnothing$  6 mm  
Smallest curve radius: F = 1.5 mm convex, F = 25 mm concave, N = 3 mm convex, N = 50 mm concave  
Accuracy  $\pm$  4% of measured value (standard)  
 $\pm$  1% of measured value (two-point calibr.)  
Power supply 4 x LR3 Micro, AAA  
Weight 81 g  
Dimensions L x W x H, 131 x 65 x 28 mm
- Supplied in transport box with zero point plate, spacer foils, 4 batteries LR3 No. 5480794003 and operating manual

### With external probe

## Ultrasound wall thickness measuring instrument

- Non-destructive material thickness measurements (e.g. wall thickness) on homogeneous, sound-conducting materials, e.g. metals, ceramics, plastics, glass
- Large, easily readable display
- Test head  $\varnothing$  10 mm, test frequency 5 MHz, sonic speed 1,000 - 9,999 m/s
- 1.2 - 230 mm measurement range, 0.1 mm increments
- Individual measurements or scan mode (10 measurements per second)
- Memory for 20 files (100 measurements per file)
- Battery life approx. 150 hours
- Weight 245 g
- Supplied in a plastic case with a 5 MHz test head, 2x LR6 batteries (no. 5480794006), connection agent (70 ml), operating manual

Designation	Measurement range mm	art.no.	€
TN 230-0,1 US	1.2 - 230	577005 0001	569,-

5171

### Accessories

Designation	Measurement range mm	art.no.	€
Small measuring head, $\varnothing$ 6 mm, 7 MHz, height 25 mm	0.75 - 80	577005 1000	112,-

5171

## HMM rebound hardness tester

- For testing the hardness of large, solid workpieces
- Minimum wall thickness 8 mm, minimum workpiece weight 3 kg
- Workpiece surface Ra < 10 µm
- Integrated data storage for up to 9 measurement groups
- Basis of LEEB hardness test and calculation
- Switchable backlighting, battery operation
- Dimensions L x W x H: 150 x 80 x 30 mm
- Direct display of HRC, HRB, HV, HB, HS, HL and tensile strength parameters

### Technical data:

#### Hardness scale ranges

HRC 19.8 - 68.5  
 HRB 13.5 - 101.7  
 HV 80 - 976  
 HB 30 - 655

## Surface comparison standard

### • For visual and tactile comparison

- Wear-resistant and stainless
  - Cannot be calibrated
  - Supplied in a synthetic leather case
- 30 reference samples for the entire spectrum of machining processes, approx. 120 x 90 mm: Horizontal milling, reaming, face milling, lapping, longitudinal turning, flat grinding

Comparison range Ra µm	ISO roughness classes	art.no.	€
0.05 - 12.5	N2 - N10	570601 0010	315,-

5169

- Separate plate for every machining process
- Enclosed table with Rp, Rt and Rz values

## ATORN® Laser distance measuring instrument

NEW

- Easy-to-use, handy laser distance measuring instrument for measurements in single or continuous measurement mode
- Measurement range 0.05 to 30 m
- Backlit display
- Automatic switch-off
- Laser class 2
- Dimensions 80 x 30 x 22 mm
- Supplied with pouch and 2x LR3 batteries no. 548079 4003

Measurement range mm	Error limit mm	Weight kg	art.no.	€
0.05 bis 30	2	0.1	557530 1000	80,40

5179

## Load cell

- For measuring pressure forces; low height and versatile; for occasional inspection measurements e.g. during adjustment and service work,
- **Hydraulic design**
- Drag indicator
- Supplied in a carry case with calibration certificate

## Digital force measuring devices

### Model FK

- Robust device for measuring tensile and compressive force
- Reliable operation thanks to ergonomic casing
- Attachment for all SAUTER test stands on the back
- Display switches automatically depending on direction of use
- Peak-hold function for recording peak values
- Track function for continuous measurement
- Measuring frequency 1,000 Hz
- Measurement uncertainty 0.5% (of max. value)
- Overload protection 200 %
- Automatic switch-off
- Battery operation
- Selectable units: N, kg, lb, oz
- Dimensions: Length 195 x width 84 x height 35 mm, weight: 600 g
- Supplied with batteries, mains adapter, one of each attachment: Hooked, pointed, V-shaped, blade and flat, and one 90 mm extension bar
- Measurement ranges of 10, 25 and 50 N available on request

## KERN Crane scales HCD

- High-resolution crane scale
- Rotating hook with safety lock
- Functions conveniently accessed via radio remote control, range approx. 20 m
- Data hold function: if the scales are left idle, the weight displayed will automatically freeze until the hold button is pressed
- Tare: resets the display to "0" while a load is on the scales so that any loads removed or added are displayed directly
- **Technical data:**
  - Backlit LCD display with 28 mm high digits
  - Battery operation, 4 x 1.5 V LR6 AA approx. 100 hours
  - Casing dimensions 65 x 24 x 100 mm
  - Operating temperature 5-35 °C
- Calibration according to DAkkS
- Supplied with remote control and batteries

## KERN Crane scale HFD

NEW

- high-resolution crane scales up to 12 tons
- robust design
- supports SOLAS-compliant weighing of freight
- Data Hold function: if the scales are left idle, the displayed weight will automatically freeze until the hold button is pressed
- Functions conveniently accessed via radio remote control, range approx. 20m
- Reading switches automatically as loads get heavier
- Internal battery, 70-hour operating time (without backlight)
- Housing dimensions 194 x 129 x 145mm
- Operating temperature -10 to 40°C
- Supplied with remote control without safety hooks

## KERN Precision scales PCB

- Simple, self-explanatory 5-key operation
- Option to switch between mains/battery operation
- Backlit LCD display with 15 mm high digits
- Settling time 3 sec.
- **Calibration program (CAL):** for accuracy adjustment, optional external calibration weight required
- **Unit counting:** 5, 10, 25 and 50 unit reference counts available
- Display can be switched between units and weight
- **Formulation:** separate memory for the weight of the tare container and formulation components (net total)
- Battery operation (optional): 6LR61, with automatic switch-off
- Dimensions: 163 x 245 x 79 mm
- DAkkS calibration
- Supplied with power supply, no battery

## KERN Platform scales EOB

- Package scales for shipping
- Easy to operate, with four buttons
- Large LCD display, 25 mm high digits
- Display unit can be freely positioned, flexible 1.8 m cable
- Mains power and optional battery operation (6x LR6/AA) available
- Battery operation: with automatic switch-off (after 3 min.)
- DAkkS calibration
- Supplied with power supply, no battery
- Versions with larger weighing platforms available on request

## KERN Platform scales DE-D

- Package, industrial and counting scales in one instrument
- Dual-range scales, resolution automatically adapted to the weighing range
- Large LCD display, digit height 25 mm
- Display unit (225 x 110 x 45 mm) with approx. 1.4 m connection cable
- Wall bracket for display unit optional
- Optional stand also available for raising the display unit
- Option to switch between mains/battery operation
- Settling time 2 - 3 sec.
- **Unit counting:** 5, 10, 25 and 50 unit reference counts available
- Display can be switched between units and weight
- **Formulation:** Separate memory for the weight of the tare container and formulation components (net total)
- DAkkS calibration
- Supplied with power supply, no battery

- Ultra-resistant to contact corrosion
- **15-times greater corrosion protection against temperature, de-icing salt and climate loads compared with conventional coated keys**
- up to 720 hours in the salt spray test in compliance with DIN EN ISO 9227
- environmentally-friendly chromium-free coating process
- Chrome vanadium steel, die-forged and hardened
- **ENERGY profile**

**ATORN® Torque limiter****NEW****Controlled screw tightening  
from 0.6 to 5.5 Nm**

- **Precise deviation tolerance  $\pm 10\%$**
- Tangible release and clicking sound when torque is reached
- Integrated slip clutch prevents unintentional overtightening of the screw connection
- Coloured outer sleeve with printed torque value
- Colour-coded, matching industrial bit inserts made from hardened bit steel 58-60 HRC
- Body made from carbon steel with 43-48 HRC, electrically nickel-plated
- Ergonomically shaped 2-component screwdriver handle and 2-component T-handle with optimum force transmission properties
- Customised quick-change chuck with bit lock
- **Advantage:** optimum security against overtightening of sensitive screw connections, easy handling thanks to colour coding system

Tangential is...

... highly economical.

**ATORN**<sup>®</sup>  
Performance demands quality

## ATORN® Torque wrenches

- Haptic and acoustic adjustment aid
- User-friendly thanks to an ergonomically shaped handle with a structured comfort-grip surface
- Clearly audible and tangible short-path release when the set torque is reached
- Quickly secured and released via locking ring
- Dual scale with N-m and lbf-ft.
- Viewing window protects the scale against damage
- High-quality permanent laser marking
- Shipped in protective tube packaging incl. a hanging fixture
- Made in Germany

### Lever-reversible ratchet

- Accuracy ± 3 % of scale value, ± 4 % with 1 - 6 Nm torque wrench
- 1/2 inch ratchet with 32 teeth, 3/8 inch ratchet with 30 teeth, 1/4 inch ratchet with 20 teeth
- DIN EN ISO 6789:2003 (D) square in accordance with DIN 3120, ISO 1174-1

## PRYOR Interchangeable steel type

- Special steel with precision design
- Suitable for marking steel up to 1,300 N/mm<sup>2</sup> in strength
- Set consists of 1 hand-held holder and 100 individual steel type pieces
- Several pieces of steel type can be inserted side by side in the holder.
- The precise design of the holder and the steel type produces clean, clear lettering with uniform spacing.
- For labelling name or rating plates as well as tools, machine parts etc.
- **Normal type:** the punched marking is directly legible

## PRYOR Precision hand punch

- Special steel numeral and letter stamps
- Forged blanks with perfectly centred precision engraving
- Stamp hardness 59 - 61 HRC
- Can be used with materials up to 1300 N/mm<sup>2</sup> in strength
- **Normal type:** the punched marking is directly legible
- **Mirrored type:** the punched marking appears on the workpiece as a mirror image
- Numeral sets = 10 pieces, 0-9
- Letter sets = 27 pieces, A-Z and &
- Plastic box
- Individual punch stamps available on request!

## PIG® Repair putty

- **Bonds like a two-part epoxy resin putty, without oiliness**
- PIG® Repair Putty cements everything - iron, glass, brickwork and most plastics
- **Part A** and **Part B** of the prepared epoxy system are in the same tube - simply knead the putty and apply
- Solid in 20 minutes, harder than cement after one hour
- Solvent-free, contains no VOC
- Can be stored unopened for at least two years (at 20 - 25°C, protect against direct sunlight)

### Unit prices (graduated)

Can be used everywhere for quick, effortless repairs:

- Sealing leaks in steel drums
- Repairing holes and cracks in pipes
- Mending leaks on steel and fibreglass tanks
- Restoring or re-cutting threads
- Sealing cracks in casings
- Filling and smoothing holes and hollows in floors
- Repairing steam conduits and radiators
- Sealing leaky connections
- Filling nail holes in walls
- Repairing faulty toilets
- Closing multiple cavities during injection moulding
- Reinforcing cast steel moulds
- Sealing holes in castings during production
- Making temporary repairs to heating ducts
- Repairing transformers, porcelain bushings and re-closers
- Patching aluminium containers during the production process
- Creating models, holding devices and prototypes
- Carrying out preliminary tube repairs to large vacuum cleaning systems, and much more.

## ATORN® LED workplace light

### LED workplace light

- The light is completely water-proof and in combination with the flexible swan neck allows accurate working at any given place. Even inside machinery and in hard-to-reach spots, work surfaces can be perfectly illuminated.
- Lamp head and housing constructed from robust anodised aluminium, flexible light holder hose constructed from metal with rubber sheathing
- **Protection class IP67**
- Resistant to water, oil, coolant and cutting fluid, as well as cleaning agents
- Colour temperature approx. 5,500K (cool white)
- Beam angle approx. 38°
- **Energy Efficiency Class A+**
- **Connection types:** Direct connection to the machine (24V) or all conventional supply voltages (110V-240V)
- **Supplied with:** complete with branded high-performance LED, screw clamp and screws for direct attachment to machine, table or wall

## ☀️ SUNNEX Machine shoes OSM

### Compensation/vibration damping

- For loads of up to 5,500 kg per machine shoe
- Outstanding compensation properties
- Efficient vibration damping
- Reduction in disturbing direct noise
- Pressure plate with fine-pitch thread, adjusted using integrated compensation screws
- Steel casing, rubber damping element, resistant to most types of grease, acid, oil and coolant
- Particularly suitable for machine tools, presses, stamping and embossing machines, injection moulding machines

## Machine shoes

Suitable for setting up tool, printing, plastic, textile and many other machines in all industries.

**90%** of all set-up problems with machines and related power units can be resolved with SUNNEX machine shoes. Eliminates up to 85% of vibrations, impacts and noise.

### Advantages:

- Low cost
- No need to create foundations
- Production can commence immediately after delivery and fitting
- Retrofitting your machine fleet can be done quickly

### Selection of machine shoes:

In order to select the correct SUNNEX machine shoe sizes, certain information is needed:

- Machine weight
- Number of supported surfaces for the machine shoes
- Supported load per machine shoe

Calculation:

Machine weight \_\_\_\_\_ = Size of the machine shoes  
Number of supported surfaces

(within the threshold range, the smaller of the possible sizes must be used!)

## ☀️ sunnex Machine shoes AM

### • Compensation/vibration damping

- For loads of up to 2,000 kg per machine shoe
- Stainless steel version also available for particularly demanding applications
- Articulated screw for inclined contact surfaces
- For damping light and medium-heavy machines
- Stainless steel version particularly suitable for humid, wet or corrosive environments with particularly high hygiene requirements
- Galvanised version for less challenging environments
- Integrated compensation screw
- Pitch adjustable by seven degrees
- Particularly suitable for the foodstuffs industry, process engineering, conveyor tracks, smaller workshop machines

## ☀️ sunnex Machine shoes CM

### • Vibration damping

- For loads of up to 2,000 kg per machine shoe
- For machines with integrated adjustment screws
- Very low height
- Stainless steel version also available on request
- Pressure plate made from galvanised sheet steel, base element made from high-strength rubber
- Very low height
- Extremely cost-effective
- Particularly suitable for workshop machinery, scales, slim machines and equipment

Model	Load area kg	D mm	H mm	art.no.	€
CM 80	50 - 500	80	20	775060 0080	15,70
CM 120	400 - 1000	120	24	775060 0120	34,30
CM 160	800 - 2000	160	29	775060 0160	52,40

7154

## ☀️ sunnex Damping mat SP

- Five different damping classes
- Efficient impact/vibration damping
- Reduces the transmission of machine noise
- Reduces the tendency of machines to "wander"
- For a wide range of industrial applications
- Five different versions with varying hardness, natural frequencies and load bearing capacities
- Specially developed nitrile rubber, resistant to most types of grease, acid, oil and coolant
- Can be cut to size

### Calculation

Example:  
 Machine weight: 4,000 kg  
 Interference frequency: 60 Hz  
 Circulation: 10 x 10 cm / SP unit  
 Number of surfaces: 6  
 Constant: 1.5

### Surface load / plate:

$$\frac{\text{Weight}}{\text{Total surface}} = \frac{4000}{6 \times 10 \times 10} = 6.67 \text{ daN/cm}^2$$

Max. natural frequency of the MP unit:  
 $\frac{\text{Interference frequency}}{1.5} = \frac{60}{1.5} = 40 \text{ Hz}$

## SARA® Pneumatic engraver

- Suitable for engraving work on steel and non-ferrous metals
- For marking or for reworking older engravings
- With flexible 1.4 m supply hose for unrestricted work
- Mini engraver function allows needle to be used with precision
- Robust stainless steel casing fits comfortably in the hand and prevents fatigue
- Supplied with 1/4" BSPT air connection and plug nipple
- Also suitable for humid environments
- **Supplied with:** Pneumatic engraver, engraving needle Ø 0.05 - 0.10 mm

## SARA® Pneumatic precision die grinder

- Extremely high speed of 54,000 rpm, ideal for industrial applications or for finishing engines/carburetors (fine-tuning)
- Switched on and off by rotary switch.
- Air supply and exhaust hose reduces exhaust air noise and directs exhaust air away from the body
- Air connection, 1/4 inch IT
- Supplied with 3 mm collet and spanners for disassembly

### Pneumatic precision mini die grinder

## SARA® Pneumatic die grinder

- Powerful die grinder with exhaust hose to reduce noise emission
- Robust design with low power/weight ratio for professional applications
- Infinitely variable rotational speed control
- Safety lever to prevent accidental switch-on
- Cold insulation on the handle
- With high-quality angular gear

## SARA® One-handed pneumatic die grinder

- Small design for universal use in confined spaces
- Suitable for car and commercial vehicle repairs, mechanical engineering, body construction and metalwork
- Infinitely variable speed control
- Air consumption far below average due to the use of modern pneumatic motors
- Safety lever to prevent accidental switch-on
- Cold insulation on the handle
- Supplied with 1/4 inch BSPT air connection and plug nipple
- Exhaust air can be directed away from users via a 360° rotatable exhaust air cover on the side.
- Supplied with Ø 6 mm collet

## SARA® Pneumatic belt grinder

- Very compact design for working in narrow spaces
- Easy replacement of abrasive belts thanks to integrated quick-clamp mechanism
- Handle can be angled individually by users to set the desired working position
- Cold protection due to insulated handle
- Exhaust air is directed away from users via an exhaust air cover
- Infinitely variable speed control via an easy to operate power control button
- Supplied with 1/4 inch BSPT air connection and plug nipple

## SARA® Pneumatic power drill

- **Lightweight design, high-speed with Ø 1 - 10 mm quick-release drill chuck**
- With spring balancer attachment on the casing
- High-quality planetary gearing and durable motor
- The top-mounted forward/reverse collar is suitable for right-handed and left-handed users
- Exhaust air can be directed away from users via a 360° rotatable exhaust air cover on the side
- Very low exhaust air noise
- Supplied with 1/4 inch BSPT air connection and plug nipple
- Easy-to-operate switch to select clockwise/anticlockwise rotation

## SARA® Plastic blow guns

- Precise dosing of compressed air due to infinitely variable trigger
- Comfortable working even in cold temperatures due to the all-plastic housing

### Modular pistol grip

- Compressed air connection G1/4 inch internal thread
- Nozzle connection, M12 x 1.25

Design	art.no.	€
Base body	<b>742100</b> 0101	<b>13,05</b>

7123

### Plastic pistol with extension nozzle and protective cap

- For working with scratch-prone components

Design	art.no.	€
With extension nozzle	<b>742100</b> 0001	<b>17,40</b>

7123

### Plastic pistol with SafetyStar nozzle

- With curved, star-shaped safety nozzle in the form of an extension nozzle
- Improved working conditions thanks to noise reduction below 80 dB (A)

Design	art.no.	€
With safety nozzle	<b>742100</b> 0002	<b>20,80</b>

7123

### Plastic pistol with BlowStar nozzle

- Combined safety and sound-insulating nozzle
- Noise reduction to as low as 74 dB (A)

Design	art.no.	€
With safety extension nozzle	<b>742100</b> 0003	<b>34,30</b>

7123

## Air-saving nozzle

- Regulation of air quantity and reduction of pressure in conjunction with blow-out gun, max. operating pressure: 10 bar
- Aluminium base body, other parts plastic
- Volume flow at 6 bar: 10 to 95 l/min.
- **Advantages:** The energy-saving nozzle is controllable. Among other things, downward regulation prevents sharp, pointed chips or harmful liquids such as emulsions from flying around. This helps to avoid injuries.
- Controlled by turning the operating sleeve to 7 locked-in positions, labelled with +/-, total 125°

Model	Connection thread	art.no.	€
Air-saving nozzle	M 12 x 1.25	<b>742092 0006</b>	<b>17,95</b>

7123

## ATORN® Accessories: blow guns

### Extensions for pneumatic blow guns

- For improved access to particularly difficult and/or awkward areas
- Robust extensions suitable for all **ATORN** and **SARA** blowguns
- Extensions can be equipped with all nozzles
- All extensions can be combined for an even larger length selection
- Material: Anodised aluminium

## SARA® Accessories for pneumatic tools

### Spiral hose

- Tubes on both sides fully-integrated with rotating connecting threads (galvanised brass), as well as coupling and connector
- Connections with sealing ring
- Without narrowed cross-section
- Kink-resistant thanks to anti-kink protection
- Extremely flexible
- Lower wear than with polyamide hoses thanks to soft surfaces, whereby the risk of scratching sensitive surfaces is considerably reduced

**Safety couplings**

- Safety coupling pursuant to ISO 4414, DIN EN 983 with push-button operation prevents 'whip effect' when uncoupling
- Wear parts made entirely of galvanised steel and housing made of aluminium, thus particularly sturdy and durable
- Threads and hose connections can be rotated under pressure
- Increased user comfort thanks to integrated moulded handle
- Sliding sleeve up to 8 bar can be easily operated with one hand
- REACH and RoHS-compliant
- **Steel plugs should be used as counterparts**

**Operation**

**Step 1** Press the button once to vent the coupling; the plug should remain secure in the sleeve.

**Step 2** Press the button a second time to unlock the plug, which can then be safely removed. **SARA®**

- Oil mist is harmful to health.
- Oil mist causes slippery floors and can cause damage to electrical switchgears.
- Oil mist can lead to deposits in ventilation pipes. This is a fire hazard.
- Laws and regulations are becoming more and more stringent.
- The recirculation of purified air reduces energy and heating costs.

► Centrifugal separators create cleaner, safer and more productive workplaces!

### Function

- 1 Oil mist is eliminated at the source.
- 2 Oil mist is removed from the air using centrifugal force.
- 3 The separated oil is returned to the machine.
- 4 Clean air is released back into the workshop.
- 5 A special secondary filter allows for the removal of smoke and steam and increases the degree of separation.

A perforated drum with specially designed blades rotates at high speed. Oil mist is sucked into the device and bounces off the blades. Filter mats aid the process in which small droplets form larger ones and filter out swirling solid particles. Centrifugal force presses the oil into the housing wall of the device. From here it is fed back into the machine or collecting container. What is left is cleaner air, which is returned to the factory floor.

### Mounting options

## FILTERMIST Centrifugal separator S series and XCEL2

- Efficiently removes oil and coolant mist, smoke and steam
- **Material:** Turning, milling, wet grinding, sawing, EDM / spark eroding, food processing and parts washing
- All versions comply with CE regulations.
- **Energy-efficient IE3 motors for models FX4002 - FX7002**
- **Test certificate available for IFA-tested smoke filter on request**
- Standard colour RAL 7035 (light grey), other RAL colours available on request
- **Stainless steel version:** For the removal of smoke and vapour when washing parts (parts washing machine / partswasher)
- **Supplied with:** Oil return hose (S series 2 m, FX series 4 m), assembly and operating instructions, no appliance switch
- **Pricing:** ex works, including packaging

Smoke filter with test certificate

### Superfine particle filter

#### • Compact and low-cost method to remove ultra-fine oil mist particles from the workshop air

- Synthetic high-tech filter material with a drainage effect
- Enables the recirculation of filtered oil through a patented Venturi suction system - extends the service life of the filter and lowers operating costs.
- Certified in accordance with EPA class E10

### Monitoring system F-Monitor

- measures the air flow and run time of the filter system
- **F Monitor 2+ also measures the motor temperature and vibrations**
- An LED traffic-light system warns the machine operator or indicates when a service is required.
- App control via **Bluetooth interface**
- The optional sensor monitors the vibrations and the temperature (already included with F-Monitor 2+)

Maintenance kit

**SARA® Ultra-Cleaner modular emulsion mist separator**

**INFO**

**SARA® X-Cyclone® separator**

**INFO**

**Advantages:**

- Separation efficiency up to 99.999 %
- Completely maintenance-free and self-cleaning
- Flame retardant in accordance with DIN 18869-5 and DIN 16282-6
- Made of rust-resistant materials
- Not a disposable product
- Lifetime guarantee

**Technology and operating principle:**

The aerosol-contaminated exhaust air flows into the X-CYCLONE® separator where it is accelerated to a high speed. This acceleration generates three rotating vortices which force the airborne aerosol particles against the profile, causing them to separate and run off as a liquid.

**Flame exposure test according to DIN EN 16282**

Air can flood the X-Cyclone® basic element, but the flames are blocked. Even in the event of an explosion in the workspace, the X-Cyclone® prevents any penetration of the flames and blast. Downstream equipment or drainage systems are thus protected.

**Effectiveness of various pre-separators by comparison**

**Separation efficiency of various particle sizes**

**SARA®**

# EMULSION MIST SEPARATOR ULTRA-ECO COMPACT

The SARA® Ultra-Eco compact emulsion mist separator is a compact and energy-efficient high-performance separation system for separating aqueous aerosols within machining systems. In order to achieve optimal separation efficiency, the flow behaviour was computer-simulated and the design of the filter unit adjusted until the best possible separation efficiency (of up to 99.9999 %) of dirt particles was achieved.

## SARA® Emulsion mist separator Ultra-Eco compact

- CFD-optimised high-performance separation system with a separation rate of up to 99.9999%.
- Thanks to European ErP directives, energy savings of several thousand euros are possible compared to conventional air purifiers.
- for processing machines up to approx. 2m<sup>3</sup> workspace volume
- effective separation of liquid-based aerosols
- compact design, direct assembly on the machine
- robust and torsion-free housing made of powder-coated stainless steel
- integrated long-term HEPA filter
- designed, constructed and produced in Germany
- **Supplied with:** Emulsion mist separator Ultra-Eco compact, HEPA filter
- **Pricing:** ex works, including packaging

**Compact and energy-efficient**

**SARA® Ultra-Cleaner modular emulsion mist separator****NEW**

- **Mechanical, with patented X-Cyclone® agglomerator system**
- **Thanks to European ErP directives, energy savings of several thousand euros are possible compared to conventional air purifiers.**
- **Works without disposable filters – no subsequent costs!**
- Effective separation of oils, emulsions, other fluids and solid particles
- Complete unit as a recirculating device with an integrated ventilator
- Robust and torsion-free housing made of powder-coated stainless steel (RAL 7035, light grey), smooth internal surface and with service opening
- Bottom section formed as an oil and water-tight collection tray
- Collecting tray fitted with drain cock for emptying, optional siphon available
- Thanks to the diverse installation and assembly possibilities of the Ultra-Cleaner system, most extraction problems arising in connection with various machining processes and the use of different coolant lubricants and oils can be solved with a single appliance.
- Developed, designed and manufactured in conformity with the relevant EU directives
- Ultra-Cleaners are tested for flame resistance in accordance with DIN EN 16282
- Separation efficiencies tested and confirmed by the Fraunhofer Institute for Toxicology and Experimental Medicine
- Permissible ambient temperature for all models 0°C to 50°C
- **Supplied with:** Ultra-Cleaner with frequency converter and motor cover, agglomerator and X-Cyclone® filter insert
- **Pricing:** ex works, including packaging

**Self-regulating separator**

909100 0030

**Single units**

- **Filter system automatically regulates the motor output according to the degree of contamination of the separator. This guarantees that the volume flow, inflow velocity and separation efficiency remain the same until complete contamination (red status indicator).**

- Digital wear indicator

**Ultrasonic cleaning**

Elma ultrasonic cleaning devices are recommended for cleaning filter stages and collector cells.

**Ultrasonic cleaning is one of the best cleaning methods around today.**

**It is ecological, economical, intensive and gentle all at the same time.**

**Ideal for cleaning filter stages**

## SARA® Ultra-Jet emulsion mist separator

- **Mechanical, with patented X-Cyclone® agglomerator system**
- **Thanks to European ErP directives, energy savings of several thousand euros are possible compared to conventional air purifiers.**
- **No speed regulation**
- **No disposable filters**
- Depending on size, suitable for processing machines of approx. 1-3 m<sup>3</sup> Suitable for internal chamber volume and light-duty chip-removal processes
- Compact design, direct mounting on the machine
- Up to four filter stages, can be retrofitted with a HEPA filter
- Dynamic-static combined filter system
- Dynamically balanced high-performance fan integrated into the filter unit
- Service opening with quick-release clamps
- ULTRA-JET is tested for flame resistance in accordance with DIN EN 16282
- Stainless steel housing powder-coated in RAL 7035 (light grey), high-performance X-Cyclone® separator profiles made of aluminium
- **Supplied with:** Ø 160/150 mm reducer with chip pre-filter insert, 3 m oil return hose
- **Pricing:** ex works, including packaging

## SARA® Modular separator with spray system

NEW

- Thanks to European ErP directives, energy savings of several thousand euros are possible compared to conventional air purifiers.
- Specially developed for use when machining dry cast iron, graphite and plastics, and for machining processes which generate extensive vapour and smoke.
- Water wall formed inside the appliance for pre-filtering
- Aerosols, solid particles such as dust created by cast iron machining, and hazardous gas molecules are bound and washed out
- The filter system must be connected to the existing cooling circuit on the machine or alternatively to a separate tank and pump supplied by the customer.
- 1" hose connection for inlet and 2" thread for outlet
- Flow-optimised air duct inside the appliance ensures that the entire filter surface is sprayed while reducing water circulation volume.
- The service life of the recirculated coolant is extended as a result of oxygenation
- Separation of aerosols and liquid particles by the patented X-Cyclone® and agglomerator system
- Permissible ambient temperature 0°C to 50°C
- Stainless steel housing, powder-coated in RAL 7035 (light grey)
- other RAL colours available on request
- **Supplied with:** Spray mist separator with nozzles, agglomerator and X-Cyclone® filter insert
- **Pricing:** ex works, including packaging

Self-regulating separator

909140 2500

### Single units

- Filter system automatically regulates the motor output according to the degree of contamination of the separator. This guarantees that the volume flow, inflow velocity and separation efficiency remain the same until complete contamination (red status indicator).

## The spray system

### Cleaning, increasing efficiency and air scrubbing

The spray system cleans the X-CYCLONE® aerosol separators in extraction systems, thus increasing separation efficiency, particularly for dusty exhaust air or sticky substances.

In addition, the spray system cleans the air in a similar way to air scrubbers in the chemical industry. The **permanent air scrubbing function** removes the smallest aerosols and harmful gases from the air.

High extraction efficiency

## SARA® Electrostatic oil mist separator

NEW

- Thanks to European ErP directives, energy savings of several thousand euros are possible compared to conventional air purifiers.
- Developed for extracting pure oil mists on cutting machines
- Pre-filtering of aerosols and liquid particles by the patented X-Cyclone® and agglomerator system
- Aerosols and particles measuring less than 1 µm are separated in the electrostatic collector.
- **All filter elements can be cleaned and reused – no disposable filters.**
- The base of the housing is an oil and water-tight collection tray.
- TÜV-tested fire screen in accordance with DIN EN 16282
- Appliances comply with an ozone limit of 0,2mg/m<sup>3</sup>
- Permissible ambient temperature 0°C to 40°C
- Stainless steel housing, powder-coated in RAL 7035 (light grey)
- other RAL colours available on request
- Supplied ready to plug in (Harting HAN 10) with integrated fan
- **Supplied with:** Electrostat, glass fibre agglomerator and X-Cyclone® filter insert
- **Pricing:** ex works, including packaging

Self-regulating separator

### Single unit

- **Filter system automatically regulates the motor output according to the degree of contamination of the separator. This guarantees that the volume flow, inflow velocity and separation efficiency remain the same until complete contamination (red status indicator).**
- Digital wear indicator

## SARA® Mobile smoke filter 3D

**Ideal for 3D printing**

- **Removal of smoke, vapour, odour and gas from exhaust air.**
- The fan is designed for energy-efficiency.
- Thorough air purification and air conditioning using gas filter for odour reduction, HEPA H13 high-performance particle and dust filter.
- Robust and torsion-free housing made of powder-coated stainless steel (RAL 7035 - light grey).
- The HEPA filter is equipped with a high-quality glass-fibre medium and has a large filtering surface.
- Suction arm with integrated stainless steel mechanics
- An intelligent monitoring system with electronic flow sensors guarantees the continuous function monitoring of the suction.
- The air flows indicated in the product description are achieved throughout the entire operating life.
- Designed, constructed and produced in Germany
- **Applications:** 3D printing, laser engraving, laser marking, laser cutting, wafer processing, eroding and soldering
- **Supplied with:** 3D smoke filter with two suction arms, gas filter, HEPA H13 high-performance particle filter, coarse particle filter
- **Pricing:** ex works, including packaging

Performance demands quality

SARA®

# PROTECT YOUR EMPLOYEES FROM VIRUSES AND GERMS

In addition to following the well-known AHA rules (keep your distance, observe hygiene measures, wear a mask), the risk of infection can be reduced significantly by consistent ventilation and the proper use of air-conditioning systems. There are a large number of pollutants in the air that can lead to illness, poor concentration, allergic reactions and even serious disease. The compact SARA air purifier improves indoor air quality in a wide variety of areas:

## Air purifiers in the workplace

Clean, fresh air is a necessity when it comes to optimising performance and efficiency in the workplace. Operating a laser printer in the office, for example, can produce a particle concentration in the indoor air as high as that

caused by smoking. Scientists have found that the air pollution in an office building during working hours can be up to five times higher than that of the air outside next to a busy road.

## Air purifiers in the catering industry

Fine dust particles and kitchen odours can result in very poor air quality in hotels and restaurants. Guests feel more comfortable in a fresh ambience with clean air, making them want to stay longer.

## Air purifiers at home

Fungal spores, fine dust, germs, pollen and allergens reduce the air quality in our homes. Secure a sense of well-being for the whole family by ensuring the indoor air conditions in your home are

optimal and meet air purity standards.

## Air purifiers for allergies

The quality of life of asthmatics and allergy sufferers depends crucially on air purity. Airborne allergens such as pollen, mould spores, dog and cat dander, and dust mites can greatly affect the air quality for allergy sufferers.

## SARA® Indoor air filter UCS-OH<sup>2</sup>

- Compact air purifier to improve indoor air quality
- Elimination of fungal spores, fine dust, pollen, allergens and odour particles (e.g. cigarette smoke)
- **Reduction of airborne viruses (e.g. SARS-CoV-2)**
- **Filter stages:** ePM1 85% pre-filter, gas filter, HEPA® H13 high-performance particle and fine dust filter
- Separation efficiency of 99.95% in accordance with EN1822-1:2009 for particles > 0.3 µm
- Air output adjustable in 10 steps
- Sustainable air purification concept thanks to the use of cleanable separators and filters with very long service lives.
- Stainless steel housing, powder-coated in RAL 9005 (deep black)
- **Application area:** Offices, conference rooms, lounges and break rooms, canteens, hotel rooms, schools, nurseries, supermarkets and much more.
- Designed, constructed and produced in Germany
- **Supplied with:** Air purifier, EUREVEN® F2011 pre-filter, gas filter, HEPA H13 high-performance particle filter
- **Pricing:** ex works, including packaging

## SARA® SARA-PAC Power-Air-Cleaner dry dust filter system

- Separation system with air flow of 900 m<sup>3</sup>/h or 2000 m<sup>3</sup>/h
- For virtually all typical application problems in industrial and artisan manufacturing relating to the extraction of dry dust
- The basic unit is a pocket filtration device with polyester needle felt filter bags, which can be cleaned using either a vibrating roller or a pneumatic vibrator.
- Typical areas of application include the extraction of dust generated by polishing, cutting, sawing, milling as well as de-burring when machining metal, stone, wood and plastic
- Standard colour RAL 5007 (brilliant blue), other RAL colours available on request
- **Pricing:** ex works, including packaging

**SARA® Filter fleece**

**INFO**

Save 30% on maintenance costs

No downtime

2 years' protection with one roll

No opening the switch cabinets

Replace in just 5 seconds

Protect valuable installations for just 5 cents

Prevent the spread of harmful particles

Visual check: filter is replaced in good time

**SARA® Filter fleece**

- Filter fleece to protect electrical and electronic equipment for industrial manufacturing plants and electric motors against oil mist and dust.
- Heavily contaminated filters can reduce the airflow and cause the device to overheat.
- The inspection for replacing the filter fleece is visual. If the filter is covered in impurities, it must be replaced.

**Filter fleece for switch cabinets**

- Each roll contains 110 sheets
- Sheet length 200mm
- Magnetic holder
- **Suitable for machine tools, cooling systems, control cabinets, robots, CNC machines**

**Up to 30 % savings in maintenance costs!**

9112

**Ultrasonics**

Tiny imploding vacuum bubbles have an intense yet gentle cleaning effect.

**Temperature**

In most cases, the cleaning effect is greatly enhanced by heat.

**Classic fields of application**

Surface technology, optics, laboratory, mechanical and plant engineering, watch and jewellery technology, medicine, dental, hygiene, medical engineering, aviation, electronics, automobile industry, textile industry, food processing industry and much more besides

**Chemistry**

The right cleaning chemistry reduces surface tension and loosens and binds particles of dirt.

**Time**

The use of coordinated chemistry during ultrasonic cleaning significantly shortens the cleaning time.

The Sinner's Circle - the four influencing factors in the ultrasonic cleaning process

**Ultrasonic cleaning – one of the best procedures around today  
Ecological, economical, intense and gentle at the same time.**

**Ultrasonics shorten the cleaning time**

"Ultrasonics" is used to refer to vibrations above the range audible to the human ear (> 20 kHz). Vibrations of between 20 and 130 kHz are used for cleaning. Using vibrating elements attached to the tray shelf of a cleaning tray, underpressure and overpressure waves ripple through the liquid. From a particular vibration power

density, the liquid compound ruptures and tiny, nanometre-sized vacuum bubbles are created. These tiny bubbles implode near the surface of the cleaning agent and create a pressure jet directed at the surface. This process is known as cavitation. It ensures intense yet gentle removal of particles of dirt. This happens in all places covered with

liquid – in the narrowest of joints and blind holes too. Parts and inner areas which are particularly complicated from a geometric standpoint – including areas where spray jets or manual cleaning methods fall short – are thoroughly cleaned.

**Ultrasonic cleaning equipment with heating system Elmasonic EASY**

- contemporary design, with robust cleaning trays made of wear-resistant stainless steel
- Noise-reducing plastic cover with additional function as a drip tray (model S 900/H with stainless steel cover, no drip collector function)
- Nine different sizes with tray volume 0.8 to 28 litres
- Permanent **integrated sweep function** with 100% ultrasonic function at a frequency of 37 kHz
- **Switchable pulse function** to remove tough, mineral-based contaminants and polishing compounds. The ultrasonic effect is boosted up to 20% and the impurities can be removed quickly and easily.
- Warning when the individually adjustable temperature limit is reached to prevent albuminous contaminants hardening or sensitive parts becoming damaged.
- **Supplied with:** with cover and without basket
- **Pricing:** ex works, includes packaging

**Basic unit without cover and without basket**

## Elma Ultrasonic cleaning equipment with heating system Elmasonic S

- Contemporary design, with robust cleaning trays made of wear-resistant stainless steel
- Noise-reducing plastic cover with additional function as a drip tray (model S 900/H with stainless steel cover, no drip collector function)
- Eight different sizes with tray volume 0.8 to 90 litres
- All appliances with ultrasonic frequency 37 kHz, sweep and degas function
- Heating systems with temperature-controlled function (control range 30 °C - 80 °C, i.e. the cleaning process can be started manually immediately or when the specified temperature is reached)
- **Supplied** without cover or basket (S 10/H with cover)
- **Pricing:** ex works, including packaging

## SARA® Venturi cleaner table

- **Mobile cleaning table for parts and machinery**
- The pneumatic blow gun is continuously supplied with compressed air independently of the foot pedal so that the gun can also be used to clean the machine cabin.
- **Filterless operation, completely maintenance-free**
- **Stainless steel housing** with integrated transport castors
- Equipped with patented X-Cyclone® filter element to prevent aerosol discharge
- Quick connection to the existing pneumatic system
- Negative pressure nozzle for extracting solid particles and liquid mists
- Developed, designed and manufactured in conformity with the relevant EU directives
- Also available with integrated washing table on request
- **Supplied with:** Supplied ready for connection to quick-action pneumatic couplings, including pneumatic blow gun, Y connector, safety screen and operating manual
- **Pricing:** ex works, including packaging

**SARA® Bio-parts washing table Compact Clean****NEW**

- **Easily removes oil, grease and emulsion from tools, components and accessories**
- Protects employees and the environment
- 3-stage filter system located in the tank drain (coarse, fine and bag filters and magnet)
- Control box, contains all control and pump equipment
- Ergonomic design
- Easy transport by means of pallet truck or rail system with rollers (optional)
- Drainage device facilitates the exchange of liquid
- **No hazardous substances, no dangerous goods, no fire hazard**
- **Supplied with:** Bio-parts washing table, 5 x 20 ltr. Canister for BT100 bio-parts cleaner
- **Pricing:** ex works, including packaging

**Includes initial filling**

**SARA® Bio-parts cleaning agent BT100****NEW**

- **First biological cleaner that can be used in all common manual and automatic parts cleaning systems – we are happy to help with optimisation**
- Microorganisms in the cleaner break down the removed oil
- Suitable for all common materials
- Ideal for any modern workshop
- **Non-hazardous, VOC reduction, NSF certification**
- Can be used in the Compact Clean bio-parts washer, parts washers and high-pressure parts washers
- **Application area:** Maintenance and servicing of machine parts, components, tools, etc.

**Easily removes oil, grease and emulsion**

# Environmental technology info

**The Compact Clean bio-parts washing table is ideal for cleaning the components of filter systems, emulsion treatment trolleys or industrial vacuum cleaners.**

The SARA® cutting fluids product range is the latest generation of high-performance cutting fluids. These have been developed for high demands on product quality and manufacturing reliability in the machining process. Thanks to the latest technologies, the cutting fluids offer a long service life, high lubricating and cooling performance, and low consumption. In addition, they are particularly user-friendly thanks to their environmentally friendly ingredients.

**Advantages**

- Very good lubricating and cooling performance
- Low consumption and low odour
- For a long machine service life
- Low foaming in soft water or under high mechanical load
- Biostable against microorganisms
- High user-friendliness thanks to environmentally friendly ingredients (formaldehyde-free)

**Product overview/selection guide**

**SARA® Thread-cutting paste****Soft thread-cutting paste**

- **Universal high-performance water/soap-based thread cutting paste**
- Semi-pasty grease
- Latest generation multi-purpose cutting paste
- For universal applications, also for difficult-to-machine materials such as stainless and heat-resistant steels, titanium, manganese, cast steel, chrome-nickel, etc.
- Ideally suited to thread cutting, centring, broaching and milling
- Medium is applied directly from the squeeze bottle onto the metal surface in need of treatment.
- Light blue colour, odourless
- Flash point > 225 °C, melting point 32 °C
- **Free of petroleum, chlorine and sulphur**
- **Not a hazardous substance**

**Multi-purpose pump**

- Handy pump for diesel, heating oil, hydraulic oil and motor oil
- For 200 l barrels
- 1 m plastic hose with outlet nozzle
- Intake pipe
- Flow rate 0.4 l/stroke

Description	art.no.	€
Multi-purpose pump (lever-operated cylinder pump), 0.4 l/stroke	<b>742004 0001</b>	<b>117,-</b>
7125		

**ARIANA Filling level display**

- For commercially available 60 and 210 l containers
- For non-corrosive fluids such as cutting fluid concentrates, emulsions, oils, antifreeze, heating oil etc. as well as liquid media
- Permanent volume display
- Fitted on 3/4 inch opening, leaving 2" bung opening free

Description	art.no.	€
Filling level display	<b>742039 0001</b>	<b>61,-</b>

## SARA® Canister and barrel mixer

- Mixer for all container sizes
- Easy to handle
- Precise metering ensures economical use of emulsions
- An appropriate mixture ratio can be adjusted precisely using the needle valve
- The concentration should be checked using a hand-held refractometer
- The device operates on the Venturi principle
- All water-soluble concentrates can be mixed
- Can be attached without difficulty to 5, 10, 25, 60 and 200 l containers
- **Delivery includes:** 3 inlet pipes, adapter set for drums and canisters, and two connection hoses

Description	art.no.	€
Canister and barrel mixer	907056 0001	430,-
	9122	

## SARA® Pneumatic drum pump

- Pneumatic dual-function suction and pressure pump
- For filling and emptying lubricant and coolant containers
- Used coolant, sludge and small metallic residue is sucked into a steel drum by vacuum
- Simply rotating the knob creates overpressure and the drum can be emptied
- Simply screw the pump into the bung hole (3/4") and the suction hose into the second bung hole (2") of a standard steel drum
- Required pressure approx. 6 - 8 bar
- Filling and emptying of approx. 60 l/min
- Automatic closing valve prevents overflowing
- **Caution:** Do not use the pneumatic pump for highly inflammable or explosive liquids. The steel drum must be undamaged and airtight.
- **Supplied with** approx. 3 m suction hose, coupling, inlet pipe and adapter

Description	art.no.	€
Compressed air drum pump, stainless steel, 3/4 inch	931004 0001	470,-
	9110

## SARA® Overflow protection sirens

- **To monitor the maximum or minimum fill level**
- Acoustic fill level control on your machine tool
- No excess hall cleaning due to container overflowing
- Easy attachment thanks to magnetic plate
- **Delivery includes:** Siren with magnetic foot and 1x 9 volt monoblock battery

Description	art.no.	€
Overflow protection sirens	906011 0001	114,50
	9120	

## Hand-held refractometer

- **Measurement range 0 - 32 %**
- The hand-held refractometer enables the cutting fluid concentration to be checked quickly. As a result, it is possible to use these fluids at the optimum concentration.
- Better utilisation of machine tools
- Longer tool service life
- Avoids rust caused by excessively diluted emulsions
- Allows the emulsion concentration to be varied during operation according to requirements (complies with TRGS 611)
- Reduced costs
- The scale of the hand-held refractometer is in percent and is easy to read
- **Supplied** with protective bag and pipette

Description	art.no.	€
Hand-held refractometer, analogue	907050 0001	102,-
	9122	

## Digital hand-held refractometer

- **Measurement range 0 - 70 %**
- **Ideal for users who wear glasses**
- For checking the emulsions in cutting fluids
- Solution 0.1 % (Brix)
- Accuracy +0.2 % (Brix)
- Digital temperature range 0 - 95 °C
- Automatic temperature correction
- Battery operation
- Auto-off function
- **Supplied** with battery, pipette, operating manual, plastic case

## KÜMI coolant supply system

- Adjustable coolant hose, comprising individual plastic elements
- For use on all machine tools
- Replacement for conventional systems, plastic elements can be flexibly adjusted which allows coolant to reach any desired position
- Non-conducting and resistant to most chemicals and solvents
- Also suitable for blowing out workpieces, clamping equipment and machine tables
- Complete systems with magnetic anchoring bases and individual elements allow for a large number of possible combinations
- Operating pressure max. 6 bar
- **Operating pressure up to max. 60 bar is possible by attaching band clamps**  
**7630104001 or 7630204001**
- Compatible with the following systems: FLEXOLINE, OSSMANN, LOC-LINE, HYDRA, SNAPLOC, LUBE-COOL, VARIO, MAXIFLEXI
- Systems benefit from closer-fitting modules. This improves their ability to withstand higher pressures and ensures that the fluid stream remains directionally stable.

Use with mechanical pump or automatic pulse generator for drop lubrication

Used for constant drop or fine-spray lubrication

Used for fine-spray lubrication

## SARA® Pneumatic cold air nozzle

- Localised cooling for machine tools
- Dual function: both hot and cold air
- Ideal for use when no lubricating or coolant are desired
- Simple compressed air connection (3 - 8 bar)
- **Operates based on the principle of a vortex tube in which two counter-rotating air flows are created**
- Cold air outlet in the blue component (down to -48 °C)
- Hot air outlet in the red component (up to 100 °C)
- Air consumption at 7 - 8 bar approx. 270 l/min
- Supplied with magnetic base, spherical valve, connection for 3/8 inch quick-action pneumatic coupling, silencer, 1/2 inch articulated hose with round nozzle

## Emulsion treatment

**INFO**

Cutting fluid on wet-cutting machine tools is subject to heavy contamination. Hydraulic oils, track oils and greases that are introduced into the system are deposited on the emulsion surface and, at high concentrations, prevent the vital exchange of oxygen. When this mixes with floating and deposited solids, it forms the ideal breeding ground for bacteria and fungi, causing the cutting fluid to break down.

**SARA emulsion treatment systems** vacuum off a mixture of oils and solids from the emulsion surface. This mixture is separated in the maintenance system; the cleaned emulsion is then returned to the tool machine and the separated oil is fed into a separate container for disposal.

The emulsion and oil are separated using a gentle method which relies entirely on physics so as to avoid negative impacts on the emulsion as the result of centrifuging or similar. Separates up to 97% of floating and swirling tramp oils.

### Application areas

- Lathes
- Milling machines
- Grinding machines
- Parts washers
- Quenching tanks

### Advantages

- Removes tramp oils and solids simultaneously
- Works automatically in bypass mode, without the need for personnel
- No machine downtimes
- Prevents odour formation and eliminates risk of infection
- Extends the service life of lubricants and tools
- **Up to 50% savings in disposal costs!**

The oil collects on the surface of the resting basin (middle chamber).

Changing the water level allows the collected oil to be drained off into the collection tank via a rounded edge.

As the oil drains off, the surface begins to clear. As soon as all impurities have been removed from the surface, the water level can be lowered again.

## SARA® Emulsion maintenance station

- **Stationary/mobile treatment station for removing foreign oils from the cooling lubricant**
- **Emulsion treatment without staff intervention and no machine downtime (bypass procedure)**
- Robust, fully-welded stainless steel housing with oil-resistant outside coating
- Examples of use include machine tools, parts washers
- **Supplied with:** EPS, suction and return hose,
- **Pricing:** ex works, including packaging

## SARA® Emulsion maintenance cart

- **Mobile cart for removing large volumes of tramp oil**
- **Emulsion treatment without staff intervention and no machine downtime (bypass procedure)**
- Coarse particle removal through integrated pre-filter (standard filter 100 µm)
- Reduced risk of allergic reactions, skin disorders and unpleasant smells
- Liquid temperature max. 50 °C
- Overflow protection for safe automatic operation
- Long-lift high-performance eccentric spiral pump
- Maintenance-free AC motor, 0.37 kW, 230 V connection
- Robust, fully-welded stainless steel housing with oil-resistant outside coating
- **Supplied with:** Treatment cart, float, suction and return hose, 100 µm filter insert
- **Pricing:** ex works, including packaging

**No personnel required for tramp oil removal - bypass process**

## SARA® Magnetic filter SMF

- Affordable extraction without consumables **SARA** Magnetic filters Particles and impurities from all types of process fluids e.g. cooling lubricant, washing water, cooling water, fuel and much more.
- Thanks to the extremely high field strength, dirt particles are extracted from iron, steel and partially stainless steel, carbide and corundum, and adhere to the exterior of the magnets.
- Separation of tiny particles as small as 1 µm
- Guaranteed flux density of at least 10,000 gauss
- Improved surface quality thanks to cleaner cooling lubricant
- Reduced wear to machinery and tools
- **No disposal costs, filtered material can be recycled**
- **No additional auxiliary energy required**

Considerably reduces operating costs

## SARA® Magnetic filters

INFO

Magnetic filters have the ability to remove ferrous particles from process fluids such as cooling water, emulsions, grinding oil, washing water, etc. Due to the force of the magnetic field, ferrous particles such as iron, steel, carbide, etc. are drawn from the process fluids and adhere to the magnetic filter rods. Thus the particles are extracted and can be disposed of quickly, easily and by type; meanwhile the clean process fluid can be reused.

### Function

In a filter housing, the contaminated water flows turbulently around the magnetic filter rods. The ferrous particles are drawn to the magnetic filter rods and adhere to the surface of the magnetic filter rods. The filter performance depends on several factors. These include the material and the size of the particles, the viscosity of the fluid to be purified, the magnetic flux density of the magnetic filter rods, the dwell time of the fluid in the magnetic field, as well as the distance between the particles and the magnetic filter rods. **Optimum separation rates** are achieved thanks to the use of ultra-efficient magnetic materials with very high magnetic forces and the flow-optimised design of SARA magnetic filters.

SARA magnetic filters are characterised, in particular, by the optimisation of these factors. The use of ultra-efficient magnetic filter rods with a magnetic flux density of at least 10,000 gauss guarantees the best filtration results, even filtering out particles measuring less than 1 µm. The optimised flow guidance in the magnetic filter also improves the effect of the magnetic filter rods.

### SARA magnetic filters are used in a wide range of production processes

- Filtration of cooling lubricants during grinding or honing work
- Purification of cooling water or washing water
- Removal of particles from cutting oils
- Removal of superfine particles from drawing oils

Using magnetic filters can enhance the manufacturing quality in production processes due to fewer particles, and thus significantly increase the service life of process fluids. SARA magnetic filters work without additional auxiliary power, are manufactured from high-quality, durable stainless steel, and are equipped with Viton seals.

## SARA® Belt skimmer

**Oil skimmer systems:** Contaminations in coolant emulsions from leaked oil floating on the surface, such as hydraulic oil, peripheral lubrication or contact surface oil cause problems with the production process. Oil leakages reduce oxygen absorption, thus encouraging bacterial growth. They also cause deposits to develop on machines and workpieces, increase the formation of oil mist and reduce cooling performance. The consequences are: skin diseases, unpleasant odours, higher disposal costs, corrosion, bacterial contamination, poor cooling performance and problematic chipping behaviour. The following oil skimmer systems provide assistance in this regard.

- Special oil-carrying belt
- Tramp oil removal from the emulsion surface
- Installed above the emulsion container, requires little space
- Immersion depth: 225 mm

### S series

- **For continuous or time-controlled operation (timer switch included)**
- Colour: RAL 7035 (light grey)
- **Delivery:** includes timer switch, skimmer belt (800 mm) and oil return hose

Model	Output l/h	Belt dimensions L x W mm	Connection V/Hz	Dimensions L x W x H mm	Weight kg	art.no.	€

## SARA® Cutting fluid aerator to reduce bacterial growth

- **Reduces bacterial growth in the cutting fluid**
- Prevents a cohesive tramp oil slick
- Increases the service life of cutting fluids
- Tramp oil should then be removed using an emulsion treatment cart (9030020001) or skimmer system
- Removing tramp oil extends the service life and ensures an even bio balance in the cutting fluid
- Low-maintenance stainless steel housing for easy cleaning
- For direct mounting on the machine
- Can be set with daily or weekly timer
- **Supplied** with timer, aeration plates and connection hoses

Floating foreign oil

Aerating lubricant

Result: no cohesive oil slick

## SARA® Industrial vacuum cleaners

INFO

SARA industrial vacuum cleaners rely on innovative suction technology and their robust design for many years of use. Attention is paid not only to top-quality workmanship, but also to the high quality of the materials used.

Whether you need to remove coarse dirt, hazardous dusts or highly viscous liquids, SARA industrial vacuum cleaners have the right product for you.

Electric and compressed air vacuums from SARA are characterised by the following quality features:

- Reliable suction power
- Easy handling
- Robust design
- Very powerful thanks to highly developed suction technology
- Effective cleaning
- Long service life

### The right tool for every application

SARA offers compressed air vacuums and electric vacuums for the removal of dust, liquids, soldering fumes, welding fumes, chips, very hot materials, very cold materials, acidic substances, toxic substances, explosive materials and much more. Available in mobile or stationary version and also with explosion protection in accordance with current ATEX regulations as an option. There are also a range of different options for emptying: via a detachable collection container, via a silo flap, or direct emptying into the customer's own collection container.

Various filter types are available depending on the requirements of dusty extraction media, also in accordance with DIN EN 60335 2 69 Annex AA with IFA test certificate.

Please do not hesitate to contact us for your special cleaning requirements

Bypass process extracts emulsion directly into the disposal container

Vacuum chips even in hard-to-reach places

**SARA® Chip and emulsion vacuum cleaner****NEW**

- **Mobile vacuum cleaner for removing coarse particles from liquids as well as clearing up spills and wet chips**
- **A fully automatic bypass process is used to treat the liquid, with no staff intervention involved (simultaneous suction and drainage possible)**
- Quick and easy disposal of foreign matter thanks to removable basket (Ø 3mm perforated sheet)
- Permanent fill level monitoring by means of a viewing tube on the container
- Mechanical float device
- Safety filter cloth with ring – hydrophobic + oleophobic properties
- Fluid drained by an integrated immersion pump
- Colour: RAL 7035 (light grey)
- **Supplied with:** 3m suction hose, 2-pcs. hand tube, floor nozzle with rubber edges, crevice nozzle, PEM pump hose with 1" ball valve, aluminium hose holder and utensil box
- **Pricing:** ex works, includes packaging

**Standard version**

- Max. intake air: 360m³/h

## SARA® Compressed air industrial vacuum cleaner

NEW

- **mobile compressed air vacuum cleaner for removing dry and non-flammable media such as dust, sand, chips, stops, granulate, grains, etc.**
- Corresponds to ATEX Product Guideline 2014/34/EU: Equipment Group II / Category 3 for Zone 22/2
- Filter tank with nine filter elements (total filter surface: 2m<sup>2</sup>) made of polyester needle felt with IFA Test Certificate for dust class M in accordance with DIN EN60335-2-69-Anh. AA.
- Filter elements are spread apart with earthed supporting bodies and are therefore self-cleaning during the suction operation
- Filter attachment with vacuum meter and auxiliary air flap
- The auxiliary air flap can generate a counter-air flow that exhausts the filter hose from the inside out. This efficient cleaning guarantees extremely long filter service-life, even with fine dust.
- 2.2m<sup>2</sup> HEPA - safety filter cartridge with test certificate for dust class H in accordance with DIN EN 60335-2-69 Anh. AA.
- integrated collector as cyclone pre-separator to protect the filter device
- Suspended silencer Size 4 with protective cover
- chassis with robust release device for raising and lowering the collector below the filter tank
- rollers and filter are electrostatically-conductive
- Colour: all steel parts plastic-coated in accordance with 681TA 70355 C00 DURA pol / black / micro-structure
- **Supplied with:** 3m suction hose, stainless steel hand tube, aluminium floor nozzle, wide rubber nozzle, round brush, PE-EL round-bottom bag, earthing cable, earthing clamp, aluminium hose holder and utensil box
- **Pricing:** ex works, includes packaging

for ATEX Zone 21 and 22

## Freddy Chip and emulsion vacuum cleaner Freddy

- **Mobile vacuum cleaner for removing ultra-fine particles (max. 10 µm) from liquids**
- Within a few minutes, the coolant container of a machine tool is drained and the coolant fluid cleaned of solid particles and pumped back into the machine, all simply at the push of a selector lever
- Eliminates the need for laborious and time-consuming cleaning work
- Machine downtimes are reduced
- Durable and robust steel design with oil-resistant wheels
- Automatic level control by means of cut-off
- Compact design, simple handling, extremely manoeuvrable
- **Pricing:** ex works, including packaging

**For removing ultra-fine particles up to 10 µm**

## PIG Universal mat

- **High absorbency ensures a clean and safe workplace**
- Simply place the mat over the spill
- Rapid absorption and high strength, even with fully saturated mats
- Saves on disposal costs due to the reduced volume
- Perforation enables mats to be laid as needed
- For absorbing oil, coolants, solvents and water
- Ideal for wiping off machinery, laying out tool boxes and covering work areas
- The exceptionally hard-wearing 4-in-1® mats (MAT284 and MAT235) can be used as an underlay, roll, wipe and absorbent sock
- **Price per pack**

## Grippy mat with safety edge

**NEW**

- **Black/yellow signal pattern on the edges of the roll mat warns of hazards and guarantees increased safety**
- Absorbent mat with strong grip thanks to adhesive backing
- Prevents slipping and tripping
- Grips the floor without adhesive tape
- Floor coverings can be removed without leaving residue
- Fluids cannot trickle out onto the floor
- Durable surface, suitable for pedestrian and forklift traffic
- **Easy to clean:** You can sweep, wipe, vacuum or go over the mat with your wet vacuum or floor cleaner (cleaning makes the signal edge visible again)
- **Easy adjustment:** You can trim the mat to indicate the safest route, even around corners
- **Price per pack**

**91% more environmentally friendly than leased floor mats**

9203

## PIG SPILLBLOCKER®

- **Containing leaks**
- Made of non-absorbent polyurethane; resistant to water, oil and most chemicals
- Flexible down to -20°C - adheres to smooth floors, forms a dam that can be curved as necessary
- Containing liquids
- Diverting liquids
- Protects sites from approaching liquid flows
- Due to the high weight and flexibility of the polyurethane, SPILLBLOCKER® forms a tight seal with the floor with even minor surface irregularities sealed
- Connecting sections for joining together and corner sections for rectangular layouts available

Rectangular barriers are formed using corner sections PLR206.

For greater leaks, two or more barriers are jointed with connectors PLR205.

Type	Dimensions	Contents	art.no.	€
PLR 204 barrier	5.7 x 10 x 300 cm	1 unit	913001 0001	529,-

9203

## PIG LITE-DRI absorbent

- **Absorbs up to 30 litres per bag, three times more than binding granulate**
- Absorption capacity: 1 kg = approx. 3 l
- Rapid absorption
- No silicate dust formation
- Does not scratch floors or machinery (cellulose-based)
- Leaves ash residue of less than 5 % when incinerated.
- **Pricing:** ex works, including packaging

Contents	art.no.	€
10 kg	911001 0300	23,40

9203

## SARA® Special granules SARA-Sorb V2000

- 1 kg granulate is sufficient for approx. 30 - 45 m<sup>2</sup>
- Absorption capacity: 1 kg = 0.724 litre
- Up to three times higher absorption than conventional granulates
- Absorbs virtually all liquids during operation, e.g. leaking oil, fuel, chemicals, acids, alkalis and solutions
- Fine-grained, Class III R natural material that has been calcinated several times for ecological and cost-saving use on smooth or porous surfaces
- Dust and asbestos-free, chemically neutral, non-combustible, non-toxic, crush-resistant, does not stain and leaves no residues
- Retains its strength even in a saturated state (no sludge formation)
- **Note:** All used oil binders must be disposed of in accordance with the waste code number and the medium that was absorbed.
- **For orders of 1 pallet (65 buckets or 56 bags of 10 kg), we offer a 20 % volume discount**
- **Pricing ex works, including packaging**

## SARA® Foot grilles

- **The safe machine base**
- Made of dried beech
- Can be rolled up - practical for cleaning
- Elastic, relieves strain on the vertebrae
- Robust, can also withstand hard use on machines
- Maintenance-free, no wear at connecting elements
- Supported by oil-resistant, fibre-reinforced rubber belts
- Profiled batten surface, height 3.5 cm
- Available grille widths 60 - 150 cm
- Grille length as required, prices per running metre
- 970111.... Standard version without access ramp
- 970112.... Additional charge for version with access ramp along one width (for version with access ramps along both widths, please order 2x)
- 970113.... Additional charge for version with access ramp along length
- 970114.... Additional charge for impregnation
- Corundum coating for maximum skid resistance also available on request
- Price per running metre
- **For orders with access ramp on one side, please specify which side (see example)**
- **Delivery:** free kerbside delivery within Germany, excluding platforms and custom designs

Platforms and custom designs available on request

## ☀️ sunnex Mat system

- **For damp and oily areas**
- Thickness: 13 mm
- A significant factor influencing the health and productivity of staff
- Reduces fatigue and joint pain in the feet, legs and back
- Non-slip, noise and heat insulating
- Sealed surface, easy to clean
- Tapered edge, no trip hazard, can be driven over
- Individual parts can be fitted together like jigsaw pieces
- Dovetail profile for simple, tool-free connection
- Nitrile rubber – exceptionally resistant to wear, cleaning agents, cutting oils, hot chips, falling tools
- **ESD version available on request**
